## Table of Contents

Chapter 1. Anti Skimming .....	4
Chapter 2. Barcode .....	10
Chapter 3. Bill Recycling Module .....	11
Chapter 4. Card Reader .....	1373
Chapter 5. CSM60 .....	1377
Chapter 6. Encryption PIN Pad .....	1448
Chapter 7. PNC .....	1470
Chapter 8. Receipt Printer .....	1479
Chapter 9. RF Reader .....	1481
Chapter 10. Shutter .....	1488

## Chapter 1. Anti Skimming

Problem Code	Problem Description	Troubleshooting
186400	Failed check CRC of USB bulk data	Check line of USB communication
186E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
186F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
286400	Failed check CRC of USB bulk data	Check line of USB communication
286E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
286F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
386400	Failed check CRC of USB bulk data	Check line of USB communication
386E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
386F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
3A96100	Set to Unsupported Antiskim mode	Check value of antiskim mode
3A96500	Range over of Antiskim frequency setting	Check range of frequency value for antiskim
3A96600	Range over of Antiskim pulse count setting	Check range of pulse count value for antiskim
3A96700	Range over of Antiskim idle time setting	Check range of idle time value for antiskim
3A96800	Range over of Antiskim duty table count setting	Check range of duty table count value for antiskim
3A96900	Range over of Antiskim duty table value setting	Check range of duty table value for antiskim
3E96100	Range over of Coil high temperature base	Check range of coil high temperature base value
3G96100	Range over of Proximity setting	Check range of proximity setting value
3I23200	Error of Coil High Temperature in Initialize	Check temperature of coil(ex. sensor unplugged) Run Initialize. If error is repeated, need to change device.
3I24200	Error of Coil Low current in Initialize	Check status of coil(ex. Unplugged or open circuit) Run Initialize. If error is repeated, need to change device.
3I24300	Error of Coil High current in Initialize	Check status of coil(ex. short circuit) Run Initialize. If error is repeated, need to change device.
3I26C00	Error of Antiskim control in Initialize	Check config of antiskim. Recover normal setting. Run Initialize. If error is repeated, need to change device.
3I31100	Warning of Proximity detect in Initialize	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
3I31200	Error of Proximity detect in Initialize	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
3P23200	Error of Coil High Temperature.	Check temperature of coil(ex. sensor unplugged) Run Initialize. If error is repeated, need to change device.
3P24200	Error of Coil Low current	Check status of coil(ex. Unplugged or open circuit) Run Initialize. If error is repeated, need to change device.

Problem Code	Problem Description	Troubleshooting
3P24300	Error of Coil High current	Check status of coil(ex. short circuit) Run Initialize. If error is repeated, need to change device.
3P26C00	Error of Antiskim control	Check config of antiskim. Recover normal setting. Run Initialize. If error is repeated, need to change device.
3P31100	Warning of Proximity detect	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
3P31200	Error of Proximity detect	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
3U96200	Failed check CRC of BIN file data for download	Check BIN file for download
3U96300	Wrong sequence of BIN file data index	Check line of USB communication
3U96A00	Size over of BIN file for download	Check BIN file for download
3U96B00	Error of BIN file header	Check BIN file for download
3X86400	Failed check CRC of USB bulk data (CMD MI x)	Check line of USB communication
3X86E00	Undefined SubCMD (CMD MI x)	Check CMD Mi. do not use undefined CMD
3X86F00	Undefined CMD (CMD MI x)	Check CMD Mi. do not use undefined CMD
486400	Failed check CRC of USB bulk data	Check line of USB communication
486E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
486F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
586400	Failed check CRC of USB bulk data	Check line of USB communication
586E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
586F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
686400	Failed check CRC of USB bulk data	Check line of USB communication
686E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
686F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
786400	Failed check CRC of USB bulk data	Check line of USB communication
786E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
786F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
886400	Failed check CRC of USB bulk data	Check line of USB communication
886E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
886F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
986400	Failed check CRC of USB bulk data	Check line of USB communication
986E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
986F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
A86400	Failed check CRC of USB bulk data	Check line of USB communication

Problem Code	Problem Description	Troubleshooting
A86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
A86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
A96100	Set to Unsupported Antiskim mode	Check value of antiskim mode
A96500	Range over of Antiskim frequency setting	Check range of frequency value for antiskim
A96600	Range over of Antiskim pulse count setting	Check range of pulse count value for antiskim
A96700	Range over of Antiskim idle time setting	Check range of idle time value for antiskim
A96800	Range over of Antiskim duty table count setting	Check range of duty table count value for antiskim
A96900	Range over of Antiskim duty table value setting	Check range of duty table value for antiskim
B86400	Failed check CRC of USB bulk data	Check line of USB communication
B86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
B86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
C86400	Failed check CRC of USB bulk data	Check line of USB communication
C86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
C86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
D86400	Failed check CRC of USB bulk data	Check line of USB communication
D86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
D86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
E86400	Failed check CRC of USB bulk data	Check line of USB communication
E86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
E86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
E96100	Range over of Coil high temperature base	Check range of coil high temperature base value
F86400	Failed check CRC of USB bulk data	Check line of USB communication
F86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
F86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
G86400	Failed check CRC of USB bulk data	Check line of USB communication
G86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
G86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
G96100	Range over of Proximity setting	Check range of proximity setting value
H86400	Failed check CRC of USB bulk data	Check line of USB communication
H86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
H86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
I23200	Error of Coil High Temperature in Initialize	Check temperature of coil(ex. sensor unplugged) Run Initialize. If error is repeated, need to change device.

Problem Code	Problem Description	Troubleshooting
I24200	Error of Coil Low current in Initialize	Check status of coil(ex. Unplugged or open circuit) Run Initialize. If error is repeated, need to change device.
I24300	Error of Coil High current in Initialize	Check status of coil(ex. short circuit) Run Initialize. If error is repeated, need to change device.
I26C00	Error of Antiskim control in Initialize	Check config of antiskim. Recover normal setting. Run Initialize. If error is repeated, need to change device.
I31100	Warning of Proximity detect in Initialize	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
I31200	Error of Proximity detect in Initialize	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
I31300	Failure of connect to proximity sensor.	Check connector or cable of proximity sensor. Replace the proximity sensor.
I86400	Failed check CRC of USB bulk data	Check line of USB communication
I86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
I86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
J86400	Failed check CRC of USB bulk data	Check line of USB communication
J86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
J86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
K86400	Failed check CRC of USB bulk data	Check line of USB communication
K86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
K86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
L86400	Failed check CRC of USB bulk data	Check line of USB communication
L86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
L86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
M86400	Failed check CRC of USB bulk data	Check line of USB communication
M86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
M86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
N86400	Failed check CRC of USB bulk data	Check line of USB communication
N86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
N86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
O86400	Failed check CRC of USB bulk data	Check line of USB communication
O86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
O86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
P23200	Error of Coil High Temperature.	Check temperature of coil(ex. sensor unplugged) Run Initialize. If error is repeated, need to change device.

Problem Code	Problem Description	Troubleshooting
P24200	Error of Coil Low current	Check status of coil(ex. Unplugged or open circuit) Run Initialize. If error is repeated, need to change device.
P24300	Error of Coil High current	Check status of coil(ex. short circuit) Run Initialize. If error is repeated, need to change device.
P26C00	Error of Antiskim control	Check config of antiskim. Recover normal setting. Run Initialize. If error is repeated, need to change device.
P31100	Warning of Proximity detect	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
P31200	Error of Proximity detect	Check dust or unknown things around of proximity sensor. Run Initialize. If error is repeated, need to change device.
P31300	Failure of connect to proximity sensor.	Check connector or cable of proximity sensor. Replace the proximity sensor.
P86400	Failed check CRC of USB bulk data	Check line of USB communication
P86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
P86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
Q86400	Failed check CRC of USB bulk data	Check line of USB communication
Q86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
Q86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
R86400	Failed check CRC of USB bulk data	Check line of USB communication
R86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
R86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
S86400	Failed check CRC of USB bulk data	Check line of USB communication
S86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
S86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
T86400	Failed check CRC of USB bulk data	Check line of USB communication
T86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
T86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
U86400	Failed check CRC of USB bulk data	Check line of USB communication
U86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
U86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
U96200	Failed check CRC of BIN file data for download	Check BIN file for download
U96300	Wrong sequence of BIN file data index	Check line of USB communication
U96A00	Size over of BIN file for download	Check BIN file for download
U96B00	Error of BIN file header	Check BIN file for download
V86400	Failed check CRC of USB bulk data	Check line of USB communication

Problem Code	Problem Description	Troubleshooting
V86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
V86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
W86400	Failed check CRC of USB bulk data	Check line of USB communication
W86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
W86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
X86400	Failed check CRC of USB bulk data (CMD MI x)	Check line of USB communication
X86E00	Undefined SubCMD (CMD MI x)	Check CMD Mi. do not use undefined CMD
X86F00	Undefined CMD (CMD MI x)	Check CMD Mi. do not use undefined CMD
Y86400	Failed check CRC of USB bulk data	Check line of USB communication
Y86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
Y86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD
Z86400	Failed check CRC of USB bulk data	Check line of USB communication
Z86E00	Undefined SubCMD	Check CMD Mi. do not use undefined CMD
Z86F00	Undefined CMD	Check CMD Mi. do not use undefined CMD

## Chapter 2. Barcode

Problem Code	Problem Description	Troubleshooting
9708014	Failed to open communication port	Check the serial port, cable, or reset the unit to recover. If it is not recovered, replace main board or the unit.
9708030	Failed to create Registry	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708031	Failed to read Registry	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708032	Failed to write Registry	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708034	Failed to delete Registry	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708042	Failed to run sensor polling thread.	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708043	Failed to stop sensor polling thread.	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708101	Failed to make enable barcode Device	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708102	Failed to make disable barcode Device	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708103	Failed to read data from barcode device	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708104	communication error between SP and firmware during idle status.	1 .SP Close and Open(Take the Log for failure) 2. Restart the system
9708105	encountered unexpected timeout from firmware.	1 .SP Close and Open(Take the Log for failure) 2. Restart the system

## Chapter 3. Bill Recycling Module

Problem Code	Problem Description	Troubleshooting
510R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
510R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
510R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
510SZ00	Receive undefined command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
511R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
511R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
511R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
511R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
512R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
512R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
512R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
512R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5130100	RC3 GS301 Light Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5130200	RC3 GS302 Light Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5130500	RC3 GS305 Light Jam during Deposit Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5131100	RC3 GS301 Dark Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5131200	RC3 GS302 Dark Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5131500	RC3 GS305 Dark Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5132100	Error occurred by notes remained in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5132200	Error occurred by notes remained in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5132500	Error occurred by notes remained in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5133100	Sensor auto calibration error in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5133200	Sensor auto calibration error in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5133500	Sensor auto calibration error in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5134100	Extern lights check error in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5134200	Extern lights check error in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5134500	Extern lights check error in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5135100	Path error on transport path in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5135200	Path error on transport path in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5135500	Path error on transport path in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5136100	Path error on sensor except for transport path in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5136200	Path error on sensor except for transport path in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5136500	Path error on sensor except for transport path in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5137100	Error occurred by the notes disorder in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5137200	Error occurred by the notes disorder in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5137500	Error occurred by the notes disorder in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
513L100	Remaining notes stack process error in RC3 GS301 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
513L200	Remaining notes stack process error in RC3 GS302 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
513L500	Remaining notes stack process error in RC3 GS305 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
513R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
513R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
513R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
513R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5140100	RC4 GS401 Light Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5140200	RC4 GS402 Light Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5140500	RC4 GS405 Light Jam during Deposit Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5141100	RC4 GS401 Dark Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5141200	RC4 GS402 Dark Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5141500	RC4 GS405 Dark Jam during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5142100	Error occurred by notes remained in RC4 GS401 during Deposit Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

515R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5162100	CSM Residue Error during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5162200	CSM No separation notes Error during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5162300	CSM insert notes excess Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5162500	CSM notes disappear Error during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5162600	CSM notes appear Error during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5162Z00	CSM Residue Error during during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
516B100	CSM Notes insert position Error during Deposit Ready	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes

Problem Code	Problem Description	Troubleshooting
516B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 중) after ready separation during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516B300	CSM Separate Mis-pickup during Deposit Ready	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
516B400	CSM Separate disorder Jam (Front Skew) during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516B600	CSM Separate disorder Jam (Over Max Length) during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516B700	CSM Separate disorder Jam (Less Min Length) during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516B800	CSM Separate disorder Dark Jam during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516B900	CSM Low speed control 30 times over Error during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516BA00	CSM Over separation notes during collect lost notes during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516BE00	CSM Residue Notes in separation part after separation during Deposit Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
516G100	Fail to move CSM BP to Stack Position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
516G200	Fail to move CSM BP to Deposit Position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
516G300	Fail to move CSM BP to Separation Position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
516G500	Fail to move CSM BP to Note-Out Position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
516G600	Fail to move CSM P-Roller to Home position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
516G800	Fail to CSM return notes during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
516G900	CSM GM601 Step out during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
516GA00	Fail to move CSM BP to return note Position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
516GB00	Fail to move CSM FP to Deposit Position during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
516GF00	Fail to move CSM G-Roller to Homeposition during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
516GG00	Fail to move both CSM P/G-Roller to Homeposition during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
516M200	CSM Inner Shutter Open Error during Deposit Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
516M300	CSM Inner Shutter Close Error during Deposit Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
516M400	CSM Outer Shutter Open Error during Deposit Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
516M500	CSM Outer Shutter Close Error during Deposit Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
516M600	CSM Outer Shutter is Opened during Deposit Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
516M700	CSM Inner Shutter Open during Deposit Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
516M800	CSM Stopper Home position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
516M900	CSM Stopper Stack position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
516MB00	CSM Bill Supporter Up position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
516MC00	CSM Bill Supporter Down position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
516P100	CSM PP Withdrawal(Stack) position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516P200	CSM PP Deposit position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516P300	CSM PP Separation position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516P400	CSM PP collect lost notes position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516P500	CSM PP Note-out position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516P600	CSM PP Note-arrange position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
516P800	CSM PP Control Stack Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516P900	CSM PP Return note position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516PD00	CSM PP Check semi-note Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516PE00	CSM PP Bill SuCSM PPorter Up position Fail during Deposit Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
516R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516RB00	CSM BP response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516RF00	CSM Feed Motor response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516RL00	CSM Lift response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516RP00	CSM PP response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516RR00	CSM Bill supporter response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
516RS00	CSM Inner Shutter response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516RT00	CSM Stopper response timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516SA00	CSM Receive undefined command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
516SR00	CSM Sub Task for Wait Setting Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5172100	Error occurred by notes remained in TSK GS701 during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5172200	Error occurred by notes remained in TSK GS702 during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5172300	Error occurred by notes remained in TSK GS703,4 during Deposit Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5172Z00	Error occurred by notes remained in TSK All Sensor during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5177100	Error occurred by the notes disorder in TSK GS701 during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5177200	Error occurred by the notes disorder in TSK GS702 during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5177300	Error occurred by the notes disorder in TSK GS703,4 during Deposit Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5177Z00	Error occurred by the notes disorder in TSK All during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
517C200	TSK Last note unclear during separation during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
517L100	Remaining notes stack process error in TSK GS701 during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
517L200	Remaining notes stack process error in TSK GS702 during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
517L300	Remaining notes stack process error in TSK GS703,4 during Deposit Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
517LZ00	Remaining notes stack process error in TSK All during Deposit Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
517R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
517R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
517R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
517R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518HA01	GS801A Sensor Error during Deposit Ready	1. Check GS801A2. Operate to initialize BRM(Recovery)
518HA02	GS801B Sensor Error during Deposit Ready	1. Check GS801B2. Operate to initialize BRM(Recovery)
518HA03	GS801A, GS801B Sensor Error during Deposit Ready	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
518HA04	GS802A Sensor Error during Deposit Ready	1. Check GS802A2. Operate to initialize BRM(Recovery)
518HA05	GS801A, GS802A Sensor Error during Deposit Ready	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
518HA06	GS801B, GS802A Sensor Error during Deposit Ready	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
518HA07	GS801A, GS801B, GS802A Sensor Error during Deposit Ready	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
518HA08	GS802B Sensor Error during Deposit Ready	1. Check GS802B2. Operate to initialize BRM(Recovery)
518HA09	GS801A, GS802B Sensor Error during Deposit Ready	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
518HA10	GS801B, GS802B Sensor Error during Deposit Ready	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
518HA11	GS801A, GS801B, GS802B Sensor Error during Deposit Ready	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
518HA12	GS802A, GS802B Sensor Error during Deposit Ready	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
518HA13	GS801A, GS802A, GS802B Sensor Error during Deposit Ready	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
518HA14	GS801B, GS802A, GS802B Sensor Error during Deposit Ready	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
518HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Deposit Ready	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
518HB01	MR Sensor Level Error during Deposit Ready	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
518HC02	UV_01 Sensor Level Error during Deposit Ready	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
518HF03	CIS Shading data loading Fail during Deposit Ready	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
518HF04	Detection DB Table loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF05	BC FPGA Data checksum Fail during Deposit Ready	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
518HF06	BC FPGA Configuration Fail during Deposit Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
518HF07	BC FPGA Header Information Loading Fail during Deposit Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
518HF08	BC FPGA Initialize Fail during Deposit Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
518HF09	BC FPGA VERSION Fail during Deposit Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
518HF11	Detection DB #01 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF12	Detection DB #02 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF13	Detection DB #03 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF14	Detection DB #04 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF15	Detection DB #05 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF16	Detection DB #06 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF17	Detection DB #07 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF18	Detection DB #08 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF19	Detection DB #09 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
518HF20	Detection DB #10 loading Fail during Deposit Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
518HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Deposit Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Deposit Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG03	BC Transaction Ready Fail When Receive BC READY Command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
518HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Deposit Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Deposit Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Deposit Ready	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG07	Receive BC Unknown Command during Deposit Ready	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
518HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Deposit Ready	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Deposit Ready	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Deposit Ready	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
518HG11	No Nation Code When Receive BC READY Command during Deposit Ready	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Deposit Ready	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
518HG20	Fail to Initialize CIS When Receive BC READY Command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
518HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
518HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
518HG23	DD Sensor DAC Set Error When Receive BC READY Command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
518HG24	ENCODER Mode Set Error When Receive BC READY Command during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
518HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Deposit Ready	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Deposit Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Deposit Ready	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Deposit Ready	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Deposit Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Deposit Ready	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Deposit Ready	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Deposit Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Deposit Ready	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Deposit Ready	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Deposit Ready	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Deposit Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
518HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Deposit Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Deposit Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Deposit Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Deposit Ready	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Deposit Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG46	Bill Number Error When Receive Check No Write Command during Deposit Ready	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Deposit Ready	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG48	Bill Number Table CRC Error When Receive Check No Write Command during Deposit Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Deposit Ready	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HH01	Fail to Delete NAND FLASH during Deposit Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
518HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Deposit Ready	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
518HH03	Fail to Download Detection DB during Deposit Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
518HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Deposit Ready	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
518HH05	Detection DB Download File Check Error during Deposit Ready	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
518HH06	Detection DB Download File Size Error during Deposit Ready	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
518HH07	DB Table Save Error After Download Detection DB during Deposit Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
518HH08	Over Detection DB Download (Over 10) during Deposit Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
518HH09	Detection DB Header Information Error during Deposit Ready	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
518HH10	EP Download Fail during Deposit Ready	1. Re-download BC EP.2. Change the BC B/D if continuous error.
518HH11	EP Download Check Error during Deposit Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
518HH12	EP Download File Size Error during Deposit Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
518HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Deposit Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
518HH14	BC FPGA Download Fail during Deposit Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
518HH15	Header Information Save Error After BC FPGA Download during Deposit Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
518HH16	Not Provide BC FPGA Download during Deposit Ready	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
518HH17	EEPROM READ/WRITE Error during Deposit Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
518HH18	Receive Unit Serial Number Undefined Option during Deposit Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
518HH19	Receive USB Undefined Command during Deposit Ready	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
518HH20	No BC Process Note When Receive Image Upload Command during Deposit Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH21	FC1 Set Error When Receive Image Upload Command during Deposit Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH22	BC is Processing Note When Receive Image Upload Command during Deposit Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH23	FC2 Set Error When Receive Image Upload Command during Deposit Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH24	Not Provide Total Image Upload Function during Deposit Ready	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
518HH25	Not Provide Note Number Detection Image Upload Function during Deposit Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH26	FC2 Set Error When Receive Image Information Upload Command during Deposit Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
518HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Deposit Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Deposit Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Deposit Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Deposit Ready	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
518HI01	RecogTask Messeage Timeout Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
518HI02	ScanTask Messeage Timeout Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
518HI03	UartTask Messeage Timeout Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
518HI04	BcUsbTask Messeage Timeout Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
518HJ01	Algorithm Initialize Fail during Deposit Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HJ02	Algorithm Ready Fail during Deposit Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HJ03	Algorithm Information Set Error during Deposit Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
518HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Deposit Ready	1. Retry the operation

Problem Code	Problem Description	Troubleshooting
518HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Deposit Ready	1. Check the number of CST Setting notes info
518HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Deposit Ready	1. Check Withdrawal notes setting
518HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Deposit Ready	1. Check Withdrawal notes info
518HS01	FPGA Write Data Error When Initialize Scan Driver during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS05	Not Process Shading When Initialize Scan Driver during Deposit Ready	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
518HS08	Fail to Set DAC When Initialize Scan Driver during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS11	FPGA Write Data Error When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS13	Fail to Set CIS Led On Value When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS14	Fail to Set Source of Scan Ligh When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS15	Not Process Shading When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS17	Fail to Set AFE Chip When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS18	Fail to Set DAC When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS19	MR/UV/DD Sampling Start Error When BC Ready during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS1A	Fail to Set 2-Notes DAC When BC Ready during Deposit Ready	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
518HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Deposit Ready	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
518HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS28	Fail to Set DAC When Stop BC during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS29	MR/UV/DD Sampling Stop Error When Stop BC during Deposit Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
518HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Deposit Ready	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
518HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Deposit Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
518HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Deposit Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
518HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Deposit Ready	1. Retry the operation2. Change BC
518HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Deposit Ready	1. Retry the operation2. Change BC
518HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Deposit Ready	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
518HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Deposit Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
518HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Deposit Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
518HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Deposit Ready	1. Retry the operation2. Change BC
518HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Deposit Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
518HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Deposit Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
518HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Deposit Ready	1. Retry the operation2. Change BC
518R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
518R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518S100	BCU response MI error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518S200	BCU response BCC error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518S300	BCU response Sub MI error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518S400	BCU response Parameter error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
518S900	BCU response Timeout Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51A2100	Error occurred by notes remained in GS801 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2200	Error occurred by notes remained in GS002 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2300	Error occurred by notes remained in GS003 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2400	Error occurred by notes remained in GS004 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2500	Error occurred by notes remained in GS005 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2600	Error occurred by notes remained in GS006 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
51A2700	Error occurred by notes remained in GS014 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2800	Error occurred by notes remained in GS018 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2900	Error occurred by notes remained in GS020 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2A00	Error occurred by notes remained in GS021 during Deposit Ready	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2C00	Error occurred by notes remained in GS030 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2E00	Error occurred by notes remained in GS001 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2H00	Error occurred by notes remained in GS618 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2J00	Error occurred by notes remained in GS619 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2K00	Error occurred by notes remained in GS701,702 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2M00	Error occurred by notes remained in GSA01 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
51A2N00	Error occurred by notes remained in GSA02 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2P00	Error occurred by notes remained in GSA03 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2Q00	Error occurred by notes remained in GSD01 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51A2W00	Error occurred by notes remained in GS802 during Deposit Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
51AA100	UTC open Error before operation Deposit Ready	1. Open the upper unit. 2. Check the UTC removal and reinstallation
51AA200	TSK open Error before operation Deposit Ready	1. Open the upper unit. 2. Check the TSK open and close
51AA300	BMU Inter Lock Error before operation Deposit Ready	1. Check BMU open and close
51AA400	BMU open Error before operation Deposit Ready	1. Check BMU open and close
51AA500	Replenishment CST open Error before operation Deposit Ready	1. Check the Transit CST installation
51AA600	CSM open Error before operation Deposit Ready	1. Open the upper unit. 2. Check CSM Open/Close
51AA800	BMD Inter Lock Error before operation Deposit Ready	1. Open the lower unit. 2. Check the BMD open and close
51AA900	BMD open Error before operation Deposit Ready	1. Open the lower unit. 2. Check the BMD open and close
51AAA00	BC Open Error before operation Deposit Ready	1. Open the upper unit. 2. Check BC Open/Close
51AAB00	RC Full Error before operation Deposit Ready	1. Open the lower unit. 2. Check RC Full and remove notes
51AAC00	RJC Full Error before operation Deposit Ready	1. Open the upper unit. 2. Check RJC Full and remove notes
51AAD00	UTC Full Error before operation Deposit Ready	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
51AAE00	RTC Full Error before operation Deposit Ready	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
51AAF00	RC Empty Error before operation Deposit Ready	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC

Problem Code	Problem Description	Troubleshooting
51AAG00	Suspected note RC open Error before operation Deposit Ready	1. Open the lower unit. 2. Check the RC removal and reinstall
51AAH00	Status of BMU loading in the BMU Test Mode before the operation during Deposit Ready	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
51AAJ00	Deposit Ready is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
51AE100	Received operation command without Initial Info Set during Deposit Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
51AE200	Status on not operation reception command during Deposit Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
51AE300	Received operation command without System Info Read during Deposit Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
51AE400	Transaction was executed without Initializing after power on during Deposit Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
51AEE00	RBU RS485 communication sequence disorder during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
51AEF00	RBU RS485 connection line disorder during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
51AEL00	RBU communication was not ready after power on during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
51AR100	Message timeout error during operation ready during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51AR200	Message timeout error during transation operation during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51AR300	Message timeout error during error postprocessing during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51AR800	RBU/BC sensor auto dimming response message timeout error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51ARC00	BC response message timeout error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51ARJ00	Message timeout error during Stop Ready during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51BR000	RBU Response Timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
51BR700	RBU Response Message Timeout during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51BS100	RBU RS-232 Seq Num Echo Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51BS200	RBU RS-232 MI Echo Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51BSS00	RBU Auto Calibration Command Parameter Error during Deposit Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
51US100	USB Bulk Sequence Error during Deposit Ready.	1. Restart over AP-SP
51US300	USB Bulk Received Length Error during Deposit Ready.	1. Reboot the system
51US400	Message transmission Error from USB to Main Task during Deposit Ready.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
51US500	Message reception Error from MainTask to USB during Deposit Ready.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
51USCMD	Bulk command data check error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
51USCRC	CRC data check error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
51USLEN	Bulk length error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5200100	GS801 Light Jam error during Deposit Count	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5200200	GS002 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200300	GS003 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200400	GS004 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200500	GS005 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200600	GS006 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200700	GS014 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200800	GS018 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200900	GS020 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5200A00	GS021 Light Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5200C00	GS030 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200E00	GS001 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200H00	GS618 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200J00	GS619 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5200M00	GSA01 Light Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5200N00	GSA02 Light Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5200P00	GSA03 Light Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5200Q00	GSD01 Light Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5200W00	GS802 Light Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5201100	GS801 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5201200	GS002 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201300	GS003 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201400	GS004 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201500	GS005 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201600	GS006 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201700	GS014 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201800	GS018 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201900	GS020 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201A00	GS021 Dark Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5201C00	GS030 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201E00	GS001 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201H00	GS618 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201J00	GS619 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5201M00	GSA01 Dark Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5201N00	GSA02 Dark Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5201P00	GSA03 Dark Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5201Q00	GSD01 Dark Jam error during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5201W00	GS802 Dark Jam error during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202100	Error occurred by notes remained in GS801 during Deposit Count	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5202200	Error occurred by notes remained in GS002 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202300	Error occurred by notes remained in GS003 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202400	Error occurred by notes remained in GS004 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202500	Error occurred by notes remained in GS005 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202600	Error occurred by notes remained in GS006 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202700	Error occurred by notes remained in GS014 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202800	Error occurred by notes remained in GS018 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202900	Error occurred by notes remained in GS020 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202A00	Error occurred by notes remained in GS021 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5202C00	Error occurred by notes remained in GS030 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5202E00	Error occurred by notes remained in GS001 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202H00	Error occurred by notes remained in GS618 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202J00	Error occurred by notes remained in GS619 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5202M00	Error occurred by notes remained in GSA01 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5202N00	Error occurred by notes remained in GSA02 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5202P00	Error occurred by notes remained in GSA03 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5202Q00	Error occurred by notes remained in GSD01 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5202W00	Error occurred by notes remained in GS802 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205100	GS801 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5205200	GS002 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5205300	GS003 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205400	GS004 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205500	GS005 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205600	GS006 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205700	GS014 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205800	GS018 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205900	GS020 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205A00	GS021 Path error on transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5205C00	GS030 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205E00	GS001 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5205H00	GS618 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205J00	GS619 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5205M00	GSA01 Path error on transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5205N00	GSA02 Path error on transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5205P00	GSA03 Path error on transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5205Q00	GSD01 Path error on transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5205W00	GS802 Path error on transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5206100	GS801 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5206200	GS002 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5206300	GS003 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5206400	GS004 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

5206C00	GS030 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5206E00	GS001 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5206H00	GS618 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5206J00	GS619 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5206M00	GSA01 Path error on sensor except for transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5206N00	GSA02 Path error on sensor except for transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5206P00	GSA03 Path error on sensor except for transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5206Q00	GSD01 Path error on sensor except for transport path during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5206W00	GS802 Path error on sensor except for transport path during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207100	Error occurred by the notes disorder in GS801 during Deposit Count	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5207200	Error occurred by the notes disorder in GS002 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207300	Error occurred by the notes disorder in GS003 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207400	Error occurred by the notes disorder in GS004 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5207500	Error occurred by the notes disorder in GS005 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207600	Error occurred by the notes disorder in GS006 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207700	Error occurred by the notes disorder in GS014 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207800	Error occurred by the notes disorder in GS018 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207900	Error occurred by the notes disorder in GS020 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207A00	Error occurred by the notes disorder in GS021 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5207C00	Error occurred by the notes disorder in GS030 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207E00	Error occurred by the notes disorder in GS001 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207H00	Error occurred by the notes disorder in GS618 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5207J00	Error occurred by the notes disorder in GS619 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5207M00	Error occurred by the notes disorder in GSA01 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5207N00	Error occurred by the notes disorder in GSA02 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5207P00	Error occurred by the notes disorder in GSA03 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5207Q00	Error occurred by the notes disorder in GSD01 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5207W00	Error occurred by the notes disorder in GS802 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
520D100	Reject excess error (continue Reject error) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520D200	Reject excess error (notes excess error) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520D300	Reject excess error (Unappointed notes error) during Deposit Count	1. Check the Deposited Denomination
520D400	Reject excess error (Cassette note error) during Deposit Count	1. Check the Deposited Denomination
520D500	Reject excess error (2notes) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520D600	Reject excess error (Gap error(1note)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520D700	Reject excess error (Gap error(2notes)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520D800	Reject excess error (skew error) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520D900	Reject excess error (shift error) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520DA00	Reject excess error (Max length error(1note)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520DB00	Reject excess error (Max length error(2notes)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM

Problem Code	Problem Description	Troubleshooting
520DC00	Reject excess error (Max length error(3notes)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520DD00	Reject excess error (Max length error(4notes)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520DE00	Reject excess error (Min length error(1note)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520DF00	Reject excess error (Min length error(2notes)) during Deposit Count	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
520DG00	Reject excess error (note error) during Deposit Count	1. Check the Deposited Denomination
520DH00	Reject excess error (MR error) during Deposit Count	1. Check the Notes(Failure to Notes recognition)
520DJ00	Reject excess error (IR error) during Deposit Count	1. Check the Notes(Failure to Notes recognition)
520DK00	Reject excess error (Edge error) during Deposit Count	1. Check the Notes(Failure to Notes recognition)
520DL00	Reject excess error (Image error) during Deposit Count	1. Check the Notes(Failure to Notes recognition)
520DM00	Reject excess error (UV error) during Deposit Count	1. Check the Notes(Failure to Notes recognition)
520DN00	Reject excess error (Sensor error) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DO00	Deposit count disallowed notes reject excess error during Deposit Count	Return the Notes to customer(Semi OK Code)
520DP00	Reject excess error (Communication error) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DQ00	Reject excess error (Full & etc) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DR00	Recognition Fail Error (Recognition test fail) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DS00	Recognition Fail Error (No Recognition info) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DT00	Recognition Fail Error (Only STX in Recognition info) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DU00	Recognition Fail Error (Recognition info BCC NG) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DV00	Recognition Fail Error (Recognition info MI NG) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DW00	Recognition Fail Error (Recognition info Index Fail) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DX00	Recognition Fail Error (Info BC Pass Info) during Deposit Count	1. Operate to initialize BRM(Recovery)
520DY00	Recognition Fail Error (Serial Number Data Format error) during Deposit Count	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
520F100	GM001 motor doesn't operate at a constant speed when the motor works during Deposit Count	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
520F200	GM002 motor doesn't operate at a constant speed when the motor works during Deposit Count	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520F400	GM004 motor doesn't operate at a constant speed when the motor works during Deposit Count	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520F600	GM006 motor doesn't operate at a constant speed when the motor works during Deposit Count	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520F700	GM007 motor doesn't operate at a constant speed when the motor works during Deposit Count	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520F900	GM009 motor doesn't operate at a constant speed when the motor works during Deposit Count	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
520FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Count	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
520FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Count	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Count	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Count	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
520FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Count	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
520FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Count	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
520G100	Failure to 3Way Gate 0 degree mode conversion during Deposit Count	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Check GS008/GS009 Sensor status according to the gate location6. Initialize

Problem Code	Problem Description	Troubleshooting
520G200	Failure to 3Way Gate 120 degree mode conversion during Deposit Count	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
520GB00	Time Out to 3Way Gate Mode conversion during Deposit Count	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
520GC00	Failure to RTRJ Gate RJC Mode conversion during Deposit Count	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
520GD00	Failure to RTRJ Gate RTC Mode conversion during Deposit Count	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
520K100	Duplication S/N Error during Deposit Count	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
520N100	The number of BC Reject notes is different from that of notes passing GS618/GS619 after stack reject notes in CSM during deposit count	1. Operate to initialize BRM(Recovery)
520N200	Limit count Exceed during Deposit Count	1. Return Notes to customer(Semi OK Code)
520N300	Limit amount during Deposit Count	1. Return Notes to customer(Semi OK Code)
520N400	Jam Message Receive Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
520NA00	Checksum error when notes separate from TSK during Deposit Count	1. Operate to initialize BRM(Recovery)
520NB00	Error occurred by excess Deposit Insert Limitation Denomination during Deposit Count	1. Return Notes to customer(Semi OK Code)
520NC00	length different from separation part to stack part after transport during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
520NK00	BC recognized notes have no cassette to be stacked during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
520Q100	UTC detachment Error during Deposit Count	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
520Q200	TSK detachment Error during Deposit Count	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
520Q300	BMU Inter Lock Error during Deposit Count	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
520Q400	BMU detackment Error during Deposit Count	1. Check Load/Removal of the upper unit
520Q500	Replenishment CST detachment Error during Deposit Count	1. Check the safe door open

Problem Code	Problem Description	Troubleshooting
520Q600	CSM detackment Error during Deposit Count	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
520Q800	BMD Inter Lock Error during Deposit Count	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
520Q900	BMD detachment Error during Deposit Count	1. Check the lower Unit load/removal
520QA00	BC Open Error during Deposit Count	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
520QS00	Receive Error Stop CMD during Deposit Count	1. Initialize
520R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
520R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
520R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
520SZ00	Receive undefined command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
521R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
521R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
521R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
521R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
521RF00	RC1 Feed Motor response timeout during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
521RP00	RC1 PP response timeout during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
522R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
522R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
522R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
522R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
522RF00	RC2 Feed Motor response timeout during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
522RP00	RC2 PP response timeout during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5230100	RC3 GS301 Light Jam during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5230200	RC3 GS302 Light Jam during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5230500	RC3 GS305 Light Jam during Deposit Count	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5231100	RC3 GS301 Dark Jam during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5231200	RC3 GS302 Dark Jam during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5231500	RC3 GS305 Dark Jam during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5232100	Error occurred by notes remained in RC3 GS301 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5232200	Error occurred by notes remained in RC3 GS302 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5232500	Error occurred by notes remained in RC3 GS305 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5233100	Sensor auto calibration error in RC3 GS301 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5233200	Sensor auto calibration error in RC3 GS302 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5233500	Sensor auto calibration error in RC3 GS305 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5234100	Extern lights check error in RC3 GS301 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5234200	Extern lights check error in RC3 GS302 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5234500	Extern lights check error in RC3 GS305 during Deposit Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

528HF20	Detection DB #10 loading Fail during Deposit Count	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
528HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Deposit Count	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Deposit Count	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG03	BC Transaction Ready Fail When Receive BC READY Command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
528HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Deposit Count	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Deposit Count	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Deposit Count	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
528HG07	Receive BC Unknown Command during Deposit Count	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
528HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Deposit Count	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Deposit Count	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Deposit Count	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
528HG11	No Nation Code When Receive BC READY Command during Deposit Count	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Deposit Count	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
528HG20	Fail to Initialize CIS When Receive BC READY Command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
528HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
528HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
528HG23	DD Sensor DAC Set Error When Receive BC READY Command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
528HG24	ENCODER Mode Set Error When Receive BC READY Command during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
528HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Deposit Count	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Deposit Count	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Deposit Count	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
528HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Deposit Count	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Deposit Count	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Deposit Count	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Deposit Count	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Deposit Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Deposit Count	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Deposit Count	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Deposit Count	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Deposit Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Deposit Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Deposit Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Deposit Count	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Deposit Count	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Deposit Count	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
528HG46	Bill Number Error When Receive Check No Write Command during Deposit Count	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Deposit Count	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG48	Bill Number Table CRC Error When Receive Check No Write Command during Deposit Count	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Deposit Count	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HH01	Fail to Delete NAND FLASH during Deposit Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
528HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Deposit Count	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
528HH03	Fail to Download Detection DB during Deposit Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
528HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Deposit Count	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
528HH05	Detection DB Download File Check Error during Deposit Count	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
528HH06	Detection DB Download File Size Error during Deposit Count	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
528HH07	DB Table Save Error After Download Detection DB during Deposit Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
528HH08	Over Detection DB Download (Over 10) during Deposit Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
528HH09	Detection DB Header Information Error during Deposit Count	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
528HH10	EP Download Fail during Deposit Count	1. Re-download BC EP.2. Change the BC B/D if continuous error.
528HH11	EP Download Check Error during Deposit Count	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
528HH12	EP Download File Size Error during Deposit Count	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
528HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Deposit Count	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
528HH14	BC FPGA Download Fail during Deposit Count	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
528HH15	Header Information Save Error After BC FPGA Download during Deposit Count	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
528HH16	Not Provide BC FPGA Download during Deposit Count	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
528HH17	EEPROM READ/WRITE Error during Deposit Count	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
528HH18	Receive Unit Serial Number Undefined Option during Deposit Count	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
528HH19	Receive USB Undefined Command during Deposit Count	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
528HH20	No BC Process Note When Receive Image Upload Command during Deposit Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH21	FC1 Set Error When Receive Image Upload Command during Deposit Count	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH22	BC is Processing Note When Receive Image Upload Command during Deposit Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH23	FC2 Set Error When Receive Image Upload Command during Deposit Count	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH24	Not Provide Total Image Upload Function during Deposit Count	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
528HH25	Not Provide Note Number Detection Image Upload Function during Deposit Count	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH26	FC2 Set Error When Receive Image Information Upload Command during Deposit Count	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Deposit Count	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Deposit Count	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit Count	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
528HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit Count	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Deposit Count	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Deposit Count	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
528HI01	RecogTask Messeage Timeout Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
528HI02	ScanTask Messeage Timeout Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
528HI03	UartTask Messeage Timeout Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
528HI04	BcUsbTask Messeage Timeout Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
528HJ01	Algorithm Initialize Fail during Deposit Count	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HJ02	Algorithm Ready Fail during Deposit Count	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HJ03	Algorithm Information Set Error during Deposit Count	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
528HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Deposit Count	1. Retry the operation
528HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Deposit Count	1. Check the number of CST Setting notes info
528HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Deposit Count	1. Check Withdrawal notes setting
528HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Deposit Count	1. Check Withdrawal notes info
528HS01	FPGA Write Data Error When Initialize Scan Driver during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
528HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS05	Not Process Shading When Initialize Scan Driver during Deposit Count	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
528HS08	Fail to Set DAC When Initialize Scan Driver during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS11	FPGA Write Data Error When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS13	Fail to Set CIS Led On Value When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS14	Fail to Set Source of Scan Ligh When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS15	Not Process Shading When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS17	Fail to Set AFE Chip When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS18	Fail to Set DAC When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS19	MR/UV/DD Sampling Start Error When BC Ready during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS1A	Fail to Set 2-Notes DAC When BC Ready during Deposit Count	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
528HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Deposit Count	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
528HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS28	Fail to Set DAC When Stop BC during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS29	MR/UV/DD Sampling Stop Error When Stop BC during Deposit Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
528HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Deposit Count	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
528HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Deposit Count	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
528HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Deposit Count	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
528HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Deposit Count	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
528HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Deposit Count	1. Retry the operation2. Change BC
528HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Deposit Count	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
528HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Deposit Count	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
528HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Deposit Count	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
528HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Deposit Count	1. Retry the operation2. Change BC
528HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Deposit Count	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
528HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Deposit Count	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
528HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Deposit Count	1. Retry the operation2. Change BC
528R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528S100	BCU response MI error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528S200	BCU response BCC error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528S300	BCU response Sub MI error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528S400	BCU response Parameter error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
528S900	BCU response Timeout Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
52A2100	Error occurred by notes remained in GS801 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2200	Error occurred by notes remained in GS002 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2300	Error occurred by notes remained in GS003 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2400	Error occurred by notes remained in GS004 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2500	Error occurred by notes remained in GS005 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2600	Error occurred by notes remained in GS006 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2700	Error occurred by notes remained in GS014 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2800	Error occurred by notes remained in GS018 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2900	Error occurred by notes remained in GS020 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2A00	Error occurred by notes remained in GS021 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
52A2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2E00	Error occurred by notes remained in GS001 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2H00	Error occurred by notes remained in GS618 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2J00	Error occurred by notes remained in GS619 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2K00	Error occurred by notes remained in GS701,702 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2M00	Error occurred by notes remained in GSA01 during Deposit Count	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2N00	Error occurred by notes remained in GSA02 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2P00	Error occurred by notes remained in GSA03 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2Q00	Error occurred by notes remained in GSD01 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52A2W00	Error occurred by notes remained in GS802 during Deposit Count	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
52AA100	UTC open Error before operation Deposit Count	1. Open the upper unit. 2. Check the UTC removal and reinstallation

Problem Code	Problem Description	Troubleshooting
52AA200	TSK open Error before operation Deposit Count	1. Open the upper unit. 2. Check the TSK open and close
52AA300	BMU Inter Lock Error before operation Deposit Count	1. Check BMU open and close
52AA400	BMU open Error before operation Deposit Count	1. Check BMU open and close
52AA500	Replenishment CST open Error before operation Deposit Count	1. Check the Transit CST installation
52AA600	CSM open Error before operation Deposit Count	1. Open the upper unit. 2. Check CSM Open/Close
52AA800	BMD Inter Lock Error before operation Deposit Count	1. Open the lower unit. 2. Check the BMD open and close
52AA900	BMD open Error before operation Deposit Count	1. Open the lower unit. 2. Check the BMD open and close
52AAA00	BC Open Error before operation Deposit Count	1. Open the upper unit. 2. Check BC Open/Close
52AAB00	RC Full Error before operation Deposit Count	1. Open the lower unit. 2. Check RC Full and remove notes
52AAC00	RJC Full Error before operation Deposit Count	1. Open the upper unit. 2. Check RJC Full and remove notes
52AAD00	UTC Full Error before operation Deposit Count	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
52AAE00	RTC Full Error before operation Deposit Count	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
52AAF00	RC Empty Error before operation Deposit Count	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
52AAG00	Suspected note RC open Error before operation Deposit Count	1. Open the lower unit. 2. Check the RC removal and reinstall
52AAH00	Status of BMU loading in the BMU Test Mode before the operation during Deposit Count	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
52AAJ00	Deposit Count is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
52AE100	Received operation command without Initial Info Set during Deposit Count	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
52AE200	Status on not operation reception command during Deposit Count	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
52AE300	Received operation command without System Info Read during Deposit Count	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
52AE400	Transaction was executed without Initializing after power on during Deposit Count	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
52AEE00	RBU RS485 communication sequence disorder during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization

Problem Code	Problem Description	Troubleshooting
52AEF00	RBU RS485 connection line disorder during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
52AEL00	RBU communication was not ready after power on during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
52AH600	Failure to check clearing NVRAM during Deposit Count	1. Operate to initialize BRM(Recovery)
52AHF00	Transaction count exists but GS801A sensor no change during Deposit Count	1. Check GS801A2. Operate to initialize BRM(Recovery)
52AHG00	Transaction count exists but GS801B sensor no change during Deposit Count	1. Check GS801B2. Operate to initialize BRM(Recovery)
52AHH00	Transaction count exists but GS802A sensor no change during Deposit Count	1. Check GS802A2. Operate to initialize BRM(Recovery)
52AHJ00	Transaction count exists but GS802B sensor no change during Deposit Count	1. Check GS802B2. Operate to initialize BRM(Recovery)
52AN700	TSK stack counts is different with BC pass info of normal count in the Deposit Count	1. Operate to initialize BRM(Recovery)
52ANF00	RTC1 stack count is different with fake count during deposit count	1. Operate to initialize BRM(Recovery)
52AR100	Message timeout error during operation ready during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52AR200	Message timeout error during transation operation during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52AR300	Message timeout error during error postprocessing during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52AR800	RBU/BC sensor auto dimming response message timeout error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52ARC00	BC response message timeout error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52ARJ00	Message timeout error during Stop Ready during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52BR000	RBU Response Timeout during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52BR700	RBU Response Message Timeout during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
52BS100	RBU RS-232 Seq Num Echo Error during Deposit Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
52BS200	RBU RS-232 MI Echo Error during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52BSS00	RBU Auto Calibration Command Parameter Error during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52CRF00	RC6 Feed Motor response timeout during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52CRP00	RC6 PP response timeout during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52ERF00	CST Feed Motor response timeout during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52ERP00	CST PP response timeout during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52FRF00	RC7 Feed Motor response timeout during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
52FRP00	RC7 PP response timeout during Deposit Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
52US100	USB Bulk Sequence Error during Deposit Count.	1. Restart over AP-SP
52US300	USB Bulk Received Length Error during Deposit Count.	1. Reboot the system
52US400	Message transmission Error from USB to Main Task during Deposit Count.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
52US500	Message reception Error from MainTask to USB during Deposit Count.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
52USCMD	Bulk command data check error during Deposit Count. (USB communication failure)	1. Restart over AP-SP
52USCRC	CRC data check error during Deposit Count. (USB communication failure)	1. Restart over AP-SP
52USLEN	Bulk length error during Deposit Count. (USB communication failure)	1. Restart over AP-SP
5300100	GS801 Light Jam error during Deposit End	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5300200	GS002 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300300	GS003 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300400	GS004 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300500	GS005 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300600	GS006 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5300700	GS014 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300800	GS018 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300900	GS020 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300A00	GS021 Light Jam error during Deposit End	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5300C00	GS030 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5300E00	GS001 Light Jam error during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

530DK00	Reject excess error (Edge error) during Deposit End	1. Check the Notes(Failure to Notes recognition)
530DL00	Reject excess error (Image error) during Deposit End	1. Check the Notes(Failure to Notes recognition)
530DM00	Reject excess error (UV error) during Deposit End	1. Check the Notes(Failure to Notes recognition)
530DN00	Reject excess error (Sensor error) during Deposit End	1. Operate to initialize BRM(Recovery)
530DO00	Deposit count disallowed notes reject excess error during Deposit End	Return the Notesto customer(Semi OK Code)
530DP00	Reject excess error (Communication error) during Deposit End	1. Operate to initialize BRM(Recovery)
530DQ00	Reject excess error (Full & etc) during Deposit End	1. Operate to initialize BRM(Recovery)
530DR00	Recognition Fail Error (Recognition test fail) during Deposit End	1. Operate to initialize BRM(Recovery)
530DS00	Recognition Fail Error (No Recognition info) during Deposit End	1. Operate to initialize BRM(Recovery)
530DT00	Recognition Fail Error (Only STX in Recognition info) during Deposit End	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
530DU00	Recognition Fail Error (Recognition info BCC NG) during Deposit End	1. Operate to initialize BRM(Recovery)
530DV00	Recognition Fail Error (Recognition info MI NG) during Deposit End	1. Operate to initialize BRM(Recovery)
530DW00	Recognition Fail Error (Recognition info Index Fail) during Deposit End	1. Operate to initialize BRM(Recovery)
530DX00	Recognition Fail Error (Info BC Pass Info) during Deposit End	1. Operate to initialize BRM(Recovery)
530DY00	Recognition Fail Error (Serial Number Data Format error) during Deposit End	1. Operate to initialize BRM(Recovery)
530F100	GM001 motor doesn't operate at a constant speed when the motor works during Deposit End	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
530F200	GM002 motor doesn't operate at a constant speed when the motor works during Deposit End	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
530F400	GM004 motor doesn't operate at a constant speed when the motor works during Deposit End	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
530F600	GM006 motor doesn't operate at a constant speed when the motor works during Deposit End	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
530F700	GM007 motor doesn't operate at a constant speed when the motor works during Deposit End	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
530F900	GM009 motor doesn't operate at a constant speed when the motor works during Deposit End	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
530FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit End	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
530FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit End	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
530FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit End	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
530FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit End	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
530FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit End	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
530FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit End	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
530G100	Failure to 3Way Gate 0 degree mode conversion during Deposit End	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
530G200	Failure to 3Way Gate 120 degree mode conversion during Deposit End	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
530GB00	Time Out to 3Way Gate Mode conversion during Deposit End	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
530GC00	Failure to RTRJ Gate RJC Mode conversion during Deposit End	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
530GD00	Failure to RTRJ Gate RTC Mode conversion during Deposit End	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
530K100	Duplication S/N Error during Deposit End	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
530N400	Jam Message Receive Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
530NA00	Checksum error when notes separate from TSK during Deposit End	1. Operate to initialize BRM(Recovery)
530NC00	length different from separation part to stack part after transport during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
530NK00	BC recognized notes have no cassette to be stacked during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
530Q100	UTC detachment Error during Deposit End	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
530Q200	TSK detachment Error during Deposit End	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
530Q300	BMU Inter Lock Error during Deposit End	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
530Q400	BMU detackment Error during Deposit End	1. Check Load/Removal of the upper unit

Problem Code	Problem Description	Troubleshooting
530Q500	Replenishment CST detachment Error during Deposit End	1. Check the safe door open
530Q600	CSM detackment Error during Deposit End	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
530Q800	BMD Inter Lock Error during Deposit End	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
530Q900	BMD detachment Error during Deposit End	1. Check the lower Unit load/removal
530QA00	BC Open Error during Deposit End	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
530QS00	Receive Error Stop CMD during Deposit End	1. Initialize
530R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
530R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
530R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
530SZ00	Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5310100	RC1 GS101 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5310200	RC1 GS102 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5310500	RC1 GS105 Light Jam during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5310Z00	RC1 All Light Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5311100	RC1 GS101 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5311200	RC1 GS102 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5311500	RC1 GS105 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5311Z00	All RC1 Sensor Dark Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5312100	Error occurred by notes remained in RC1 GS101 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5312200	Error occurred by notes remained in RC1 GS102 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5312500	Error occurred by notes remained in RC1 GS105 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5312Z00	Error occurred by notes remained in All RC1 Sensor during Deposit End	1. Operate to initialize BRM.(Recovery)
5313100	RC1 GS101 Sensor auto calibration error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5313200	RC1 GS102 Sensor auto calibration error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5313500	RC1 GS105 Sensor auto calibration error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5313Z00	All RC1 Sensor auto calibration error during Deposit End	1. Operate to initialize BRM.(Recovery)
5314100	RC1 GS101 Extern lights check error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5314200	RC1 GS102 Extern lights check error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5314500	RC1 GS105 Extern lights check error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5314Z00	All RC1 Sensor Extern lights check error during Deposit End	1. Operate to initialize BRM.(Recovery)
5315100	RC1 GS101 Path error on transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5315200	RC1 GS102 Path error on transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5315500	RC1 GS105 Path error on transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5315Z00	All RC1 Sensor Path error on transport path during Deposit End	1. Operate to initialize BRM.(Recovery)
5316100	RC1 GS101 Path error on sensor except for transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5316200	RC1 GS102 Path error on sensor except for transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5316500	RC1 GS105 Path error on sensor except for transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5316Z00	RC1 All Path error on sensor except for transport path during Deposit End	1. Operate to initialize BRM.(Recovery)
5317100	Error occurred by the notes disorder in RC1 GS101 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5317200	Error occurred by the notes disorder in RC1 GS102 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5317500	Error occurred by the notes disorder in RC1 GS105 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5317Z00	Error occurred by the notes disorder in RC1 All during Deposit End	1. Operate to initialize BRM.(Recovery)
531G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
531G200	RC1 Failure to move PP to stack position during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
531G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
531G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531G600	RC1 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
531GA00	RC1 Solenoid Echo error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
531GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
531GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
531GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
531GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
531GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531GK00	RC1 Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
531GQ00	RJC Press and Stack position fail during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
531GR00	RJC Stack position fail during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
531GS00	RC1 RJC Press position fail during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
531GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.

Problem Code	Problem Description	Troubleshooting
531GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
531GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Deposit End	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
531GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
531GX00	RC1 GS101 detects notes during RJC intialize during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
531J100	RJC Full during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
531J200	RC1 No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
531J300	Full,Bottom no detect before move RC1 PP to stack position during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
531R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531RF00	RC1 Feed Motor response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531RP00	RC1 PP response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531S200	RC1 Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
531S300	RC1 Task not for separation receive separation command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531SA00	RC1 Sub Task receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
531SR00	RC1 Sub Task for Wait Setting Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5320100	RC2 GS201 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5320200	RC2 GS202 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5320500	RC2 GS205 Light Jam during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5320Z00	RC2 All Light Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5321100	RC2 GS201 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5321200	RC2 GS202 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5321500	RC2 GS205 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5321Z00	RC2 All Dark Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5322100	Error occurred by notes remained in RC2 GS201 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5322200	Error occurred by notes remained in RC2 GS202 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5322500	Error occurred by notes remained in RC2 GS205 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5322Z00	Error occurred by notes remained in RC2 All Sensor during Deposit End	1. Operate to initialize BRM.(Recovery)
5323100	Sensor auto calibration error in RC2 GS201 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5323200	Sensor auto calibration error in RC2 GS202 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5323500	Sensor auto calibration error in RC2 GS205 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5323Z00	Sensor auto calibration error in RC2 All Sensor during Deposit End	1. Operate to initialize BRM.(Recovery)
5324100	Extern lights check error in RC2 GS201 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5324200	Extern lights check error in RC2 GS202 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5324500	Extern lights check error in RC2 GS205 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5324Z00	Extern lights check error in RC2 All Sensor during Deposit End	1. Operate to initialize BRM.(Recovery)
5325100	Path error on transport path in RC2 GS201 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5325200	Path error on transport path in RC2 GS202 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5325500	Path error on transport path in RC2 GS205 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5325Z00	Path error on transport path in RC2 All Sensor during Deposit End	1. Operate to initialize BRM.(Recovery)
5326100	Path error on sensor except for transport path in RC2 GS201 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5326200	Path error on sensor except for transport path in RC2 GS202 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5326500	Path error on sensor except for transport path in RC2 GS205 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5326Z00	Path error on sensor except for transport path in RC2 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5327100	Error occurred by the notes disorder in RC2 GS201 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5327200	Error occurred by the notes disorder in RC2 GS202 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5327500	Error occurred by the notes disorder in RC2 GS205 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5327Z00	Error occurred by the notes disorder in RC2 All during Deposit End	1. Operate to initialize BRM.(Recovery)
532G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
532G200	RC2 Failure to move PP to stack position during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
532G400	RC2 Failure to upword moving of PP during RC2 stack roller retreat movement during Deposit End	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette (B) . 4. Open the recycle cassette door (B).5. Check cassette status to move stage up and down
532G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532G600	RC2 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
532GA00	RC2 Solenoid Echo error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
532GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
532GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
532GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
532GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
532GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532GK00	RC2 Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
532J200	RC2 No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
532J300	RC2 Full,Bottom no detect before move RC PP to stack position during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
532R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532RF00	RC2 Feed Motor response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532RP00	RC2 PP response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532S200	RC2 Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
532S300	RC2 Task not for separation receive separation command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532SA00	RC2 Sub Task receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
532SR00	RC2 Sub Task for Wait Setting Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5330100	RC3 GS301 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5330200	RC3 GS302 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5330500	RC3 GS305 Light Jam during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5330Z00	RC3 All Light Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5331100	RC3 GS301 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5331200	RC3 GS302 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5331500	RC3 GS305 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5331Z00	RC3 All Dark Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5332100	Error occurred by notes remained in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5332200	Error occurred by notes remained in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5332500	Error occurred by notes remained in RC3 GS305 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5332Z00	Error occurred by notes remained in RC3 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5333100	Sensor auto calibration error in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5333200	Sensor auto calibration error in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5333Z00	Sensor auto calibration error in RC3 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5334100	Extern lights check error in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5334200	Extern lights check error in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5334500	Extern lights check error in RC3 GS305 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5334Z00	Extern lights check error in RC3 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5335100	Path error on transport path in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5335200	Path error on transport path in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5335500	Path error on transport path in RC3 GS305 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5335Z00	Path error on transport path in RC3 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5336100	Path error on sensor except for transport path in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5336200	Path error on sensor except for transport path in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5336500	Path error on sensor except for transport path in RC3 GS305 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5336Z00	Path error on sensor except for transport path in RC3 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5337100	Error occurred by the notes disorder in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5337200	Error occurred by the notes disorder in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5337500	Error occurred by the notes disorder in RC3 GS305 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5337Z00	Error occurred by the notes disorder in RC3 All during Deposit End	1. Operate to initialize BRM.(Recovery)
533G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
533G200	RC3 Failure to move PP to stack position during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
533G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
533G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533G600	RC3 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
533GA00	RC3 RC Solenoid Echo error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
533GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
533GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
533GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
533GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
533GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
533J200	RC3 No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
533J300	RC3 Full,Bottom no detect before move RC PP to stack position during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
533L100	Remaining notes stack process error in RC3 GS301 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
533L200	Remaining notes stack process error in RC3 GS302 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
533L500	Remaining notes stack process error in RC3 GS305 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
533R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
533R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533RF00	RC3 Feed Motor response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533RP00	RC3 PP response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533S200	RC3 Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533S300	RC3 RC Task not for separation receive separation command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533SA00	RC3 RC Sub Task receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
533SR00	RC3 Sub Task for Wait Setting Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5340100	RC4 GS401 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5340200	RC4 GS402 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5340500	RC4 GS405 Light Jam during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5340Z00	RC4 All Sensor Light Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5341100	RC4 GS401 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5341200	RC4 GS402 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5341500	RC4 GS405 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5341Z00	RC4 All Sensor Dark Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
5342100	Error occurred by notes remained in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5342200	Error occurred by notes remained in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5342500	Error occurred by notes remained in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5342Z00	Error occurred by notes remained in RC4 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5343100	Sensor auto calibration error in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5343200	Sensor auto calibration error in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5343500	Sensor auto calibration error in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5343Z00	Sensor auto calibration error in RC4 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5344100	Extern lights check error in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5344200	Extern lights check error in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5344500	Extern lights check error in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5344Z00	Extern lights check error in RC4 All during Deposit End	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5345100	Path error on transport path in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5345200	Path error on transport path in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5345500	Path error on transport path in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5345Z00	Path error on transport path in RC4 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5346100	Path error on sensor except for transport path in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5346200	Path error on sensor except for transport path in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5346500	Path error on sensor except for transport path in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5346Z00	Path error on sensor except for transport path in RC4 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5347100	Error occurred by the notes disorder in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5347200	Error occurred by the notes disorder in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5347500	Error occurred by the notes disorder in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5347Z00	Error occurred by the notes disorder in RC4 All during Deposit End	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
534G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
534G200	RC4 Failure to move PP to stack position during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
534G400	RC4 Failure to upward moving of PP during RC4 stack roller retreat movement during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
534G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534G600	RC4 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
534GA00	RC4 RC Solenoid Echo error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
534GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
534GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
534GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
534GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
534J200	RC4 No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes
534J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
534L100	Remaining notes stack process error in RC4 GS401 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
534L200	Remaining notes stack process error in RC4 GS402 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
534L500	Remaining notes stack process error in RC4 GS405 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

5356100	Path error on sensor except for transport path in RC5 GS501 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5356200	Path error on sensor except for transport path in RC5 GS502 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5356500	Path error on sensor except for transport path in RC5 GS505 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5356Z00	Path error on sensor except for transport path in RC5 All during Deposit End	1. Operate to initialize BRM.(Recovery)
5357100	Error occurred by the notes disorder in RC5 GS501 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5357200	Error occurred by the notes disorder in RC5 GS502 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5357500	Error occurred by the notes disorder in RC5 GS505 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5357Z00	Error occurred by the notes disorder in RC5 All during Deposit End	1. Operate to initialize BRM.(Recovery)
535G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
535G200	RC5 Failure to move PP to stack position during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
535G400	RC5 Failure to upward moving of PP during RC5 stack roller retreat movement during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
535G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535G600	RC5 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
535GA00	RC5 Solenoid Echo error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
535GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
535GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
535GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
535GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
535GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535GK00	RC5 Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
535J200	RC5 No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E).5. Fill up the Notes if there are no notes
535J300	RC5 Full,Bottom no detect before move RC PP to stack position during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.

Problem Code	Problem Description	Troubleshooting
535L100	Remaining notes stack process error in RC5 GS501 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
535L200	Remaining notes stack process error in RC5 GS502 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
535L500	Remaining notes stack process error in RC5 GS505 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
535R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535RF00	RC5 Feed Motor response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535RP00	RC5 PP response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535S200	RC5 Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535S300	RC5 Task not for separation receive separation command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535SA00	RC5 Sub Task receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
535SR00	RC5 Sub Task for Wait Setting Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5361H00	GS618/619 Dark Jam error during Deposit End.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5362100	CSM Residue Error during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5362200	CSM No separation notes Error during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5362300	CSM insert notes excess Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5362500	CSM notes disappear Error during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5362600	CSM notes appear Error during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5362Z00	CSM Residue Error during during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
536G100	Fail to move CSM BP to Stack Position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
536G200	Fail to move CSM BP to Deposit Position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
536G300	Fail to move CSM BP to Separation Position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
536G500	Fail to move CSM BP to Note-Out Position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
536G600	Fail to move CSM P-Roller to Home position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
536G800	Fail to CSM return notes during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
536G900	CSM GM601 Step out during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status

Problem Code	Problem Description	Troubleshooting
536GA00	Fail to move CSM BP to return note Position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
536GB00	Fail to move CSM FP to Deposit Position during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
536GF00	Fail to move CSM G-Roller to Homeposition during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
536GG00	Fail to move both CSM P/G-Roller to Homeposition during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
536M200	CSM Inner Shutter Open Error during Deposit End	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
536M300	CSM Inner Shutter Close Error during Deposit End	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
536M400	CSM Outer Shutter Open Error during Deposit End	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
536M500	CSM Outer Shutter Close Error during Deposit End	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
536M600	CSM Outer Shutter is Opened during Deposit End	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
536M700	CSM Inner Shutter Open during Stack during Deposit End	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
536M800	CSM Stopper Home position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
536M900	CSM Stopper Stack position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize

Problem Code	Problem Description	Troubleshooting
536MB00	CSM Bill Supporter Up position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
536MC00	CSM Bill Supporter Down position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
536P100	CSM PP Withdrawal(Stack) position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536P200	CSM PP Deposit position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536P300	CSM PP Separation position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536P400	CSM PP collect lost notes position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536P500	CSM PP Note-out position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536P600	CSM PP Note-arrange position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536P800	CSM PP Control Stack Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
536P900	CSM PP Return note position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536PD00	CSM PP Check semi-note Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
536PE00	CSM PP Bill SuCSM PPorter Up position Fail during Deposit End	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

5377300	Error occurred by the notes disorder in TSK GS703,4 during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5377Z00	Error occurred by the notes disorder in TSK All during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537B200	Note detected in TSK Entry After Separate Ready during Deposit End	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
537B300	TSK GM701 motor status change failed(Timeout exceeded) during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537C100	TSK Miss-pickup during separation during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber
537C200	TSK Last note unclear during separation during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
537C300	TSK Last note No front detect during separataion during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537C400	TSK Last note No rear detect during separataion during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537C500	TSK Max Length NG occur 10 times Dark Jam during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
537C600	TSK Max length note stucked in entry Light Jam during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537C700	TSK Light Jam Retry Over Error during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Deposit End	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
537C900	TSK Low speed control 30 times over Error during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)

Problem Code	Problem Description	Troubleshooting
537CA00	TSK Incounted note is not Outcounted for 500ms during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537F100	TSK GM701 stepout during separation during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
537F300	TSK GM701 F-Roller Homeposition fail during Deposit End	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
537G100	GM701 Return notes fail during Deposit End	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
537J100	TSK Full during Deposit End	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
537J200	TSK Empty during ready separation during Deposit End	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
537L100	Remaining notes stack process error in TSK GS701 during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537L200	Remaining notes stack process error in TSK GS702 during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537L300	Remaining notes stack process error in TSK GS703,4 during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537LZ00	Remaining notes stack process error in TSK All during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
537M100	TSK Stopper Home position for intialize fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
537M200	TSK Stopper Stack position for intialize fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
537M300	TSK Stopper Return note position for intialize fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
537M400	TSK Stopper Lock FP Fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
537M500	TSK Stopper Unlock FP Fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
537P100	FP Sensor detect Dark Fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
537P200	FP Sensor detect Light Fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate

Problem Code	Problem Description	Troubleshooting
537P300	PP Press position fail during Deposit End	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
537Q700	TSK Door Open during operation in Deposit End	1. Close the door of TSK(5)
537R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537RF00	TSK Feed Motor response timeout in Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537RP00	TSK PP response timeout in Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537RT00	TSK Stopper response timeout in Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537S200	TSK Receive undefined command in Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
537SR00	TSK Sub Task for Wait Setting Error in Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538HA01	GS801A Sensor Error during Deposit End	1. Check GS801A2. Operate to initialize BRM(Recovery)
538HA02	GS801B Sensor Error during Deposit End	1. Check GS801B2. Operate to initialize BRM(Recovery)
538HA03	GS801A, GS801B Sensor Error during Deposit End	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
538HA04	GS802A Sensor Error during Deposit End	1. Check GS802A2. Operate to initialize BRM(Recovery)
538HA05	GS801A, GS802A Sensor Error during Deposit End	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
538HA06	GS801B, GS802A Sensor Error during Deposit End	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
538HA07	GS801A, GS801B, GS802A Sensor Error during Deposit End	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
538HA08	GS802B Sensor Error during Deposit End	1. Check GS802B2. Operate to initialize BRM(Recovery)
538HA09	GS801A, GS802B Sensor Error during Deposit End	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
538HA10	GS801B, GS802B Sensor Error during Deposit End	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
538HA11	GS801A, GS801B, GS802B Sensor Error during Deposit End	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
538HA12	GS802A, GS802B Sensor Error during Deposit End	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
538HA13	GS801A, GS802A, GS802B Sensor Error during Deposit End	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
538HA14	GS801B, GS802A, GS802B Sensor Error during Deposit End	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
538HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Deposit End	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
538HB01	MR Sensor Level Error during Deposit End	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
538HC02	UV_01 Sensor Level Error during Deposit End	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
538HF03	CIS Shading data loading Fail during Deposit End	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
538HF04	Detection DB Table loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF05	BC FPGA Data checksum Fail during Deposit End	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
538HF06	BC FPGA Configuration Fail during Deposit End	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
538HF07	BC FPGA Header Information Loading Fail during Deposit End	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
538HF08	BC FPGA Initialize Fail during Deposit End	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
538HF09	BC FPGA VERSION Fail during Deposit End	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
538HF11	Detection DB #01 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF12	Detection DB #02 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF13	Detection DB #03 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF14	Detection DB #04 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF15	Detection DB #05 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF16	Detection DB #06 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
538HF17	Detection DB #07 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF18	Detection DB #08 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF19	Detection DB #09 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HF20	Detection DB #10 loading Fail during Deposit End	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
538HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Deposit End	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Deposit End	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG03	BC Transaction Ready Fail When Receive BC READY Command during Deposit End	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
538HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Deposit End	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Deposit End	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Deposit End	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG07	Receive BC Unknown Command during Deposit End	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
538HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Deposit End	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Deposit End	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Deposit End	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
538HG11	No Nation Code When Receive BC READY Command during Deposit End	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Deposit End	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio

Problem Code	Problem Description	Troubleshooting
538HG20	Fail to Initialize CIS When Receive BC READY Command during Deposit End	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
538HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Deposit End	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
538HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Deposit End	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
538HG23	DD Sensor DAC Set Error When Receive BC READY Command during Deposit End	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
538HG24	ENCODER Mode Set Error When Receive BC READY Command during Deposit End	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
538HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Deposit End	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Deposit End	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Deposit End	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Deposit End	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Deposit End	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Deposit End	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Deposit End	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Deposit End	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Deposit End	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
538HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Deposit End	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Deposit End	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Deposit End	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Deposit End	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Deposit End	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Deposit End	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Deposit End	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Deposit End	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG46	Bill Number Error When Receive Check No Write Command during Deposit End	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Deposit End	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG48	Bill Number Table CRC Error When Receive Check No Write Command during Deposit End	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Deposit End	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HH01	Fail to Delete NAND FLASH during Deposit End	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
538HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Deposit End	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
538HH03	Fail to Download Detection DB during Deposit End	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
538HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Deposit End	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
538HH05	Detection DB Download File Check Error during Deposit End	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
538HH06	Detection DB Download File Size Error during Deposit End	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
538HH07	DB Table Save Error After Download Detection DB during Deposit End	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
538HH08	Over Detection DB Download (Over 10) during Deposit End	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
538HH09	Detection DB Header Information Error during Deposit End	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
538HH10	EP Download Fail during Deposit End	1. Re-download BC EP.2. Change the BC B/D if continuous error.
538HH11	EP Download Check Error during Deposit End	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
538HH12	EP Download File Size Error during Deposit End	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
538HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Deposit End	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
538HH14	BC FPGA Download Fail during Deposit End	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
538HH15	Header Information Save Error After BC FPGA Download during Deposit End	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
538HH16	Not Provide BC FPGA Download during Deposit End	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
538HH17	EEPROM READ/WRITE Error during Deposit End	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
538HH18	Receive Unit Serial Number Undefined Option during Deposit End	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
538HH19	Receive USB Undefined Command during Deposit End	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
538HH20	No BC Process Note When Receive Image Upload Command during Deposit End	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH21	FC1 Set Error When Receive Image Upload Command during Deposit End	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH22	BC is Processing Note When Receive Image Upload Command during Deposit End	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
538HH23	FC2 Set Error When Receive Image Upload Command during Deposit End	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH24	Not Provide Total Image Upload Function during Deposit End	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
538HH25	Not Provide Note Number Detection Image Upload Function during Deposit End	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH26	FC2 Set Error When Receive Image Information Upload Command during Deposit End	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Deposit End	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Deposit End	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit End	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit End	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit End	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit End	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Deposit End	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Deposit End	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
538HI01	RecogTask Messeage Timeout Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
538HI02	ScanTask Messeage Timeout Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
538HI03	UartTask Messeage Timeout Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
538HI04	BcUsbTask Messeage Timeout Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
538HJ01	Algorithm Initialize Fail during Deposit End	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HJ02	Algorithm Ready Fail during Deposit End	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HJ03	Algorithm Information Set Error during Deposit End	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
538HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Deposit End	1. Retry the operation
538HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Deposit End	1. Check the number of CST Setting notes info
538HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Deposit End	1. Check Withdrawal notes setting
538HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Deposit End	1. Check Withdrawal notes info
538HS01	FPGA Write Data Error When Initialize Scan Driver during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS05	Not Process Shading When Initialize Scan Driver during Deposit End	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
538HS08	Fail to Set DAC When Initialize Scan Driver during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS11	FPGA Write Data Error When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS13	Fail to Set CIS Led On Value When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS14	Fail to Set Source of Scan Ligh When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
538HS15	Not Process Shading When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS17	Fail to Set AFE Chip When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS18	Fail to Set DAC When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS19	MR/UV/DD Sampling Start Error When BC Ready during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS1A	Fail to Set 2-Notes DAC When BC Ready during Deposit End	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
538HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Deposit End	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
538HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS28	Fail to Set DAC When Stop BC during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS29	MR/UV/DD Sampling Stop Error When Stop BC during Deposit End	1. Retry the operation.2. Operate to initialize BRM(Recovery)
538HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Deposit End	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
538HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Deposit End	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
538HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Deposit End	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
538HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Deposit End	1. Retry the operation2. Change BC
538HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Deposit End	1. Retry the operation2. Change BC
538HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Deposit End	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
538HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Deposit End	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
538HS38	Max Ovetime Ove When Process CIS Shading – Use in Plant during Deposit End	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
538HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Deposit End	1. Retry the operation2. Change BC
538HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Deposit End	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC

Problem Code	Problem Description	Troubleshooting
538HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Deposit End	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
538HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Deposit End	1. Retry the operation2. Change BC
538R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538S100	BCU response MI error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538S200	BCU response BCC error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538S300	BCU response Sub MI error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538S400	BCU response Parameter error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
538S900	BCU response Timeout Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53A2100	Error occurred by notes remained in GS801 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2200	Error occurred by notes remained in GS002 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2300	Error occurred by notes remained in GS003 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
53A2400	Error occurred by notes remained in GS004 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2500	Error occurred by notes remained in GS005 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2600	Error occurred by notes remained in GS006 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2700	Error occurred by notes remained in GS014 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2800	Error occurred by notes remained in GS018 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2900	Error occurred by notes remained in GS020 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2A00	Error occurred by notes remained in GS021 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2E00	Error occurred by notes remained in GS001 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2H00	Error occurred by notes remained in GS618 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
53A2J00	Error occurred by notes remained in GS619 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2K00	Error occurred by notes remained in GS701,702 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2M00	Error occurred by notes remained in GSA01 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2N00	Error occurred by notes remained in GSA02 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2P00	Error occurred by notes remained in GSA03 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2Q00	Error occurred by notes remained in GSD01 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53A2W00	Error occurred by notes remained in GS802 during Deposit End	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
53AA100	UTC open Error before operation Deposit End	1. Open the upper unit. 2. Check the UTC removal and reinstallation
53AA200	TSK open Error before operation Deposit End	1. Open the upper unit. 2. Check the TSK open and close
53AA300	BMU Inter Lock Error before operation Deposit End	1. Check BMU open and close
53AA400	BMU open Error before operation Deposit End	1. Check BMU open and close
53AA500	Replenishment CST open Error before operation Deposit End	1. Check the Transit CST installation
53AA600	CSM open Error before operation Deposit End	1. Open the upper unit. 2. Check CSM Open/Close
53AA800	BMD Inter Lock Error before operation Deposit End	1. Open the lower unit. 2. Check the BMD open and close
53AA900	BMD open Error before operation Deposit End	1. Open the lower unit. 2. Check the BMD open and close
53AAA00	BC Open Error before operation Deposit End	1. Open the upper unit. 2. Check BC Open/Close

Problem Code	Problem Description	Troubleshooting
53AAB00	RC Full Error before operation Deposit End	1. Open the lower unit. 2. Check RC Full and remove notes
53AAC00	RJC Full Error before operation Deposit End	1. Open the upper unit. 2. Check RJC Full and remove notes
53AAD00	UTC Full Error before operation Deposit End	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
53AAE00	RTC Full Error before operation Deposit End	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
53AAF00	RC Empty Error before operation Deposit End	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
53AAG00	Suspected note RC open Error before operation Deposit End	1. Open the lower unit. 2. Check the RC removal and reinstall
53AAH00	Status of BMU loading in the BMU Test Mode before the operation during Deposit End	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
53AAJ00	Deposit End is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
53AE100	Received operation command without Initial Info Set during Deposit End	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
53AE200	Status on not operation reception command during Deposit End	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
53AE300	Received operation command without System Info Read during Deposit End	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
53AE400	Transaction was executed without Initializing after power on during Deposit End	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
53AEE00	RBU RS485 communication sequence disorder during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
53AEF00	RBU RS485 connection line disorder during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
53AEL00	RBU communication was not ready after power on during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
53AH600	Failure to check clearing NVRAM during Deposit End	1. Operate to initialize BRM(Recovery)
53AHF00	Transaction count exists but GS801A sensor no change during Deposit End	1. Check GS801A2. Operate to initialize BRM(Recovery)
53AHG00	Transaction count exists but GS801B sensor no change during Deposit End	1. Check GS801B2. Operate to initialize BRM(Recovery)
53AHH00	Transaction count exists but GS802A sensor no change during Deposit End	1. Check GS802A2. Operate to initialize BRM(Recovery)
53AHJ00	Transaction count exists but GS802B sensor no change during Deposit End	1. Check GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
53AN100	RC1 stack counts is different with BC pass info of normal count in the Deposit End	1. Operate to initialize BRM(Recovery)
53AN200	RC2 stack counts is different with BC pass info of normal count in the Deposit End	1. Operate to initialize BRM(Recovery)
53AN300	RC3 stack counts is different with BC pass info of normal count in the Deposit End	1. Operate to initialize BRM(Recovery)
53AN400	RC4 stack counts is different with BC pass info of normal count in the Deposit End	1. Operate to initialize BRM(Recovery)
53AN500	RC5 stack counts is different with BC pass info of normal count in the Deposit End	1. Operate to initialize BRM(Recovery)
53AN800	In case of difference between notes count from Deposit Count and receipt count from Deposit End without reject notes during Deposit End	1. Operate to initialize BRM(Recovery)
53AN900	In case of denomination stack count during Deposit End more than denomination stack count during Deposit End	1. Operate to initialize BRM(Recovery)
53ANE00	RC6 stack count is different with BC passing normal count during deposit End	1. Operate to initialize BRM(Recovery)
53ANF00	RC7 stack count is different with BC passing normal count during deposit End	1. Operate to initialize BRM(Recovery)
53ANK00	TSK Separation note count during Deposit End without Reject notes is different with TSK Stack note count during deposit End	1. Operate to initialize BRM(Recovery)
53ANP00	Deposit end notes is less than Deposit count notes Reject notes after adjust Reject count during Deposit End	1. Operate to initialize BRM(Recovery)
53AR100	Message timeout error during operation ready during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
53AR200	Message timeout error during transaction operation during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
53AR300	Message timeout error during error postprocessing during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
53AR800	RBU/BC sensor auto dimming response message timeout error during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
53ARC00	BC response message timeout error during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
53ARJ00	Message timeout error during Stop Ready during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
53AS700	RC is not in use during Deposit End	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
53AS800	Reject CST Set Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53BH100	RC1 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH200	RC2 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH300	RC3 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH400	RC4 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH500	RC5 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH600	RC6 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH700	RC1 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH800	RC2 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BH900	RC3 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BHA00	RC4 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BHB00	RC5 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BHC00	RC6 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BHD00	RC1 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
53BHE00	RC2 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
53BHF00	RC3 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
53BHG00	RC4 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
53BHH00	RC5 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
53BHJ00	RC6 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
53BHK00	BMD Open Error During EEPROM Read/Write during Deposit End	1. Check the lower Unit load/removal
53BHU00	BMD EEPROM Read Error during Deposit End	1. Replace RBU B/D
53BHV00	BMD EEPROM Write Error during Deposit End	1. Replace RBU B/D
53BHW00	BMD EEPROM Verify Error during Deposit End	1. Replace RBU B/D
53BHX00	RC7 EEPROM Read Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BHY00	RC7 EEPROM Write Error during Deposit End	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
53BHZ00	RC7 EEPROM Verify Error during Deposit End	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
53BR000	RBU Response Timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53BR700	RBU Response Message Timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53BS100	RBU RS-232 Seq Num Echo Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53BS200	RBU RS-232 MI Echo Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53BSS00	RBU Auto Calibration Command Parameter Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53C0100	RC6 GSC01 Light Jam during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53C0200	RC6 GSC02 Light Jam during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53C0500	RC6 GSC05 Light Jam during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(8)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
53C0Z00	RC6 All Light Jam during Deposit End	1. Operate to initialize BRM.(Recovery)

Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53C7Z00	Error occurred by the notes disorder in RC6 All during Deposit End	1. Operate to initialize BRM.(Recovery)
53CG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53CG200	RC6 Failure to move PP to stack position during Deposit End	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
53CG400	RC6 Failure to upward moving of PP during RC6 stack roller retreat movement during Deposit End	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
53CG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CG600	RC6 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
53CGA00	RC6 RC Solenoid Echo error during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.

Problem Code	Problem Description	Troubleshooting
53CGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53CGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
53CFG00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
53CGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53CGQ00	RJC Press and Stack position fail during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
53CGR00	RJC Stack position fail during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
53CGS00	RC6 RJC Press position fail during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
53CGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
53CGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
53CGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
53CGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Deposit End	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
53CGX00	RC6 GSC01 detects notes during RJC intialize during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53CJ100	RC6 RJC Full during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
53CJ200	RC6 RC No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8).5. Fill up the Notes if there are no notes
53CJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
53CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting

53EG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
53EG200	CST Failure to move PP to stack position during Deposit End	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
53EG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Deposit End	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
53EG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EG600	CST Stack Roller retreat position disorder during RC Separation during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
53EG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Deposit End	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
53EGA00	CST RC Solenoid Echo error during Deposit End	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
53EGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
53EGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
53EGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
53EGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EGK00	CST RC Stack Roller retreat fail (Motor speed error) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
53EJ200	CST No Residue during Deposit End	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
53EJ300	CST Full,Bottom no detect before move RC PP to stack position during Deposit End	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette

Problem Code	Problem Description	Troubleshooting
53ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ERF00	CST Feed Motor response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ERP00	CST PP response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ES200	CST Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ES300	CST RC Task not for separation receive separation command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ESA00	CST RC Sub Task receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53ESR00	CST Sub Task for Wait Setting Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53F0100	RC7 GSF01 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F0200	RC7 GSF02 Light Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F0500	RC7 GSF05 Light Jam during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
53F0Z00	RC7 All Light Jam during Deposit End	1. Operate to initialize BRM.(Recovery)
53F1100	RC7 GSF01 Dark Jam during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F5Z00	All RC7 Sensor Path error on transport path during Deposit End	1. Operate to initialize BRM.(Recovery)
53F6100	RC7 GSF01 Path error on sensor except for transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F6200	RC7 GSF02 Path error on sensor except for transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F6500	RC7 GSF05 Path error on sensor except for transport path during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F6Z00	RC7 All Path error on sensor except for transport path during Deposit End	1. Operate to initialize BRM.(Recovery)
53F7100	Error occurred by the notes disorder in RC7 GSF01 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
53F7200	Error occurred by the notes disorder in RC7 GSF02 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F7500	Error occurred by the notes disorder in RC7 GSF05 during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53F7Z00	Error occurred by the notes disorder in RC7 All during Deposit End	1. Operate to initialize BRM.(Recovery)
53FG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53FG200	RC7 Failure to move PP to stack position during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
53FG400	RC7 Failure to upword moving of PP during RC7 stack roller retreat movement during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
53FG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FG600	RC7 Stack Roller retreat position disorder during RC Separation during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
53FGA00	RC7 Solenoid Echo error during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
53FGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
53FGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
53FGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
53FGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
53FGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FGK00	RC7 Stack Roller retreat fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Deposit End	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
53FJ200	RC7 No Residue during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A).5. Fill up the Notes if there are no notes
53FJ300	Full,Bottom no detect before move RC7 PP to stack position during Deposit End	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
53FRF00	RC7 Feed Motor response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
53FRP00	RC7 PP response timeout during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53FS200	RC7 Receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53FS300	RC7 Task not for separation receive separation command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53FSA00	RC7 Sub Task receive undefined command during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53FSR00	RC7 Sub Task for Wait Setting Error during Deposit End	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
53US100	USB Bulk Sequence Error during Deposit End.	1. Restart over AP-SP
53US300	USB Bulk Received Length Error during Deposit End.	1. Reboot the system
53US400	Message transmission Error from USB to Main Task during Deposit End.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
53US500	Message reception Error from MainTask to USB during Deposit End.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
53USCMD	Bulk command data check error during Deposit End. (USB communication failure)	1. Restart over AP-SP
53USCRC	CRC data check error during Deposit End. (USB communication failure)	1. Restart over AP-SP
53USLEN	Bulk length error during Deposit End. (USB communication failure)	1. Restart over AP-SP
5400100	GS801 Light Jam error during Deposit Cancel	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5400200	GS002 Light Jam error during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5400300	GS003 Light Jam error during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5400400	GS004 Light Jam error during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

5407W00	Error occurred by the notes disorder in GS802 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
540D100	Reject excess error (continue Reject error) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540D200	Reject excess error (notes excess error) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540D300	Reject excess error (Unappointed notes error) during Deposit Cancel	1. Check the Deposited Denomination
540D400	Reject excess error (Cassette note error) during Deposit Cancel	1. Check the Deposited Denomination
540D500	Reject excess error (2notes) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540D600	Reject excess error (Gap error(1note)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540D700	Reject excess error (Gap error(2notes)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540D800	Reject excess error (skew error) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540D900	Reject excess error (shift error) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DA00	Reject excess error (Max length error(1note)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DB00	Reject excess error (Max length error(2notes)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DC00	Reject excess error (Max length error(3notes)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DD00	Reject excess error (Max length error(4notes)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DE00	Reject excess error (Min length error(1note)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DF00	Reject excess error (Min length error(2notes)) during Deposit Cancel	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
540DG00	Reject excess error (note error) during Deposit Cancel	1. Check the Deposited Denomination
540DH00	Reject excess error (MR error) during Deposit Cancel	1. Check the Notes(Failure to Notes recognition)
540DJ00	Reject excess error (IR error) during Deposit Cancel	1. Check the Notes(Failure to Notes recognition)
540DK00	Reject excess error (Edge error) during Deposit Cancel	1. Check the Notes(Failure to Notes recognition)
540DL00	Reject excess error (Image error) during Deposit Cancel	1. Check the Notes(Failure to Notes recognition)

Problem Code	Problem Description	Troubleshooting
540DM00	Reject excess error (UV error) during Deposit Cancel	1. Check the Notes(Failure to Notes recognition)
540DN00	Reject excess error (Sensor error) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DO00	Deposit count disallowed notes reject excess error during Deposit Cancel	Return the Notes to customer(Semi OK Code)
540DP00	Reject excess error (Communication error) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DQ00	Reject excess error (Full & etc) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DR00	Recognition Fail Error (Recognition test fail) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DS00	Recognition Fail Error (No Recognition info) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DT00	Recognition Fail Error (Only STX in Recognition info) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DU00	Recognition Fail Error (Recognition info BCC NG) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DV00	Recognition Fail Error (Recognition info MI NG) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DW00	Recognition Fail Error (Recognition info Index Fail) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DX00	Recognition Fail Error (Info BC Pass Info) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540DY00	Recognition Fail Error (Serial Number Data Format error) during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540F100	GM001 motor doesn't operate at a constant speed when the motor works during Deposit Cancel	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
540F200	GM002 motor doesn't operate at a constant speed when the motor works during Deposit Cancel	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
540F400	GM004 motor doesn't operate at a constant speed when the motor works during Deposit Cancel	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
540F600	GM006 motor doesn't operate at a constant speed when the motor works during Deposit Cancel	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
540F700	GM007 motor doesn't operate at a constant speed when the motor works during Deposit Cancel	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
540F900	GM009 motor doesn't operate at a constant speed when the motor works during Deposit Cancel	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
540FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Cancel	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
540FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Cancel	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
540FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Cancel	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
540FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Cancel	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
540FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Cancel	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
540FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit Cancel	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
540FY00	Fail to Start BM Low Speed Control during Deposit Cancel (Motor Encoder Error)	1. Open the lower, upper unit2. Check remained Notes and substance in the upper, lower Transport Path3. Check motor encoder sensors4. Initialize
540G100	Failure to 3Way Gate 0 degree mode conversion during Deposit Cancel	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
540G200	Failure to 3Way Gate 120 degree mode conversion during Deposit Cancel	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
540GB00	Time Out to 3Way Gate Mode conversion during Deposit Cancel	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
540GC00	Failure to RTRJ Gate RJC Mode conversion during Deposit Cancel	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
540GD00	Failure to RTRJ Gate RTC Mode conversion during Deposit Cancel	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate

Problem Code	Problem Description	Troubleshooting
540K100	Duplication S/N Error during Deposit Cancel	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
540N400	Jam Message Receive Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
540NA00	Checksum error when notes separate from TSK during Deposit Cancel	1. Operate to initialize BRM(Recovery)
540NC00	length different from separation part to stack part after transport during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
540NK00	BC recognized notes have no cassette to be stacked during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
540Q100	UTC detachment Error during Deposit Cancel	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
540Q200	TSK detachment Error during Deposit Cancel	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
540Q300	BMU Inter Lock Error during Deposit Cancel	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
540Q400	BMU detackment Error during Deposit Cancel	1. Check Load/Removal of the upper unit
540Q500	Replenishment CST detachment Error during Deposit Cancel	1. Check the safe door open
540Q600	CSM detackment Error during Deposit Cancel	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
540Q800	BMD Inter Lock Error during Deposit Cancel	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
540Q900	BMD detachment Error during Deposit Cancel	1. Check the lower Unit load/removal
540QA00	BC Open Error during Deposit Cancel	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
540QS00	Receive Error Stop CMD during Deposit Cancel	1. Initialize
540R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
540R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
540R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
540SZ00	Receive undefined command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
541R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5461H00	GS618/619 Dark Jam error during Deposit Cancel.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5462100	CSM Residue Error during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5462200	CSM No separation notes Error during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5462300	CSM insert notes excess Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5462500	CSM notes disappear Error during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5462600	CSM notes appear Error during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5462Z00	CSM Residue Error during during Deposit Cancle	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
546G100	Fail to move CSM BP to Stack Position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
546G200	Fail to move CSM BP to Deposit Position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
546G300	Fail to move CSM BP to Separation Position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
546G500	Fail to move CSM BP to Note-Out Position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
546G600	Fail to move CSM P-Roller to Home position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
546G800	Fail to CSM return notes during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
546G900	CSM GM601 Step out during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
546GA00	Fail to move CSM BP to return note Position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
546GB00	Fail to move CSM FP to Deposit Position during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
546GF00	Fail to move CSM G-Roller to Homeposition during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
546GG00	Fail to move both CSM P/G-Roller to Homeposition during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
546M200	CSM Inner Shutter Open Error during Deposit Cancel	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
546M300	CSM Inner Shutter Close Error during Deposit Cancel	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
546M400	CSM Outer Shutter Open Error during Deposit Cancel	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
546M500	CSM Outer Shutter Close Error during Deposit Cancel	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
546M600	CSM Outer Shutter is Opened during Deposit Cancel	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
546M700	CSM Inner Shutter Open during Stack during Deposit Cancel	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
546M800	CSM Stopper Home position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
546M900	CSM Stopper Stack position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
546MB00	CSM Bill Supporter Up position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
546MC00	CSM Bill Supporter Down position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
546P100	CSM PP Withdrawal(Stack) position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546P200	CSM PP Deposit position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546P300	CSM PP Separation position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546P400	CSM PP collect lost notes position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546P500	CSM PP Note-out position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
546P600	CSM PP Note-arrange position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546P800	CSM PP Control Stack Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546P900	CSM PP Return note position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546PD00	CSM PP Check semi-note Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546PE00	CSM PP Bill SuCSM PPorter Up position Fail during Deposit Cancel	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
546R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546RB00	CSM BP response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546RF00	CSM Feed Motor response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546RL00	CSM Lift response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
546RP00	CSM PP response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546RR00	CSM Bill supporter response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546RS00	CSM Inner Shutter response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546RT00	CSM Stopper response timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546SA00	CSM Receive undefined command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
546SR00	CSM Sub Task for Wait Setting Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5470100	TSK GS701 Light Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5470200	TSK GS702 Light Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5470300	TSK GS703,4 Light Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5470600	GS006 Light Jam error during Deposit Cancel(TSK motor Step out)	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5470Z00	TSK All Light Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5471100	TSK GS701 Dark Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5471200	TSK GS702 Dark Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5471300	TSK GS703,4 Dark Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5471Z00	TSK All Dark Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5472100	Error occurred by notes remained in TSK GS701 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5472200	Error occurred by notes remained in TSK GS702 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5472300	Error occurred by notes remained in TSK GS703,4 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5472Z00	Error occurred by notes remained in TSK All Sensor during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5477100	Error occurred by the notes disorder in TSK GS701 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5477200	Error occurred by the notes disorder in TSK GS702 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5477300	Error occurred by the notes disorder in TSK GS703,4 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5477Z00	Error occurred by the notes disorder in TSK All during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547B200	Note detected in TSK Entry After Separate Ready during Deposit Cancel	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
547B300	TSK GM701 motor status change failed(Timeout exceeded) during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547C100	TSK Miss-pickup during separation during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber
547C200	TSK Last note unclear during separation during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
547C300	TSK Last note No front detect during separataion during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547C400	TSK Last note No rear detect during separataion during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547C500	TSK Max Length NG occur 10 times Dark Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)

Problem Code	Problem Description	Troubleshooting
547C600	TSK Max length note stucked in entry Light Jam during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547C700	TSK Light Jam Retry Over Error during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Deposit Cancel	1. Open the upper unit2. Open the TSK(Temporary StacKer) (5)3. Remove notes and substance on the PATH(4)
547C900	TSK Low speed control 30 times over Error during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
547CA00	TSK Incounted note is not Outcounted for 500ms during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547F100	TSK GM701 stepout during separation during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
547F300	TSK GM701 F-Roller Homeposition fail during Deposit Cancel	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
547G100	GM701 Return notes fail during Deposit Cancel	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
547J100	TSK Full during Deposit Cancel	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
547J200	TSK Empty during ready separation during Deposit Cancel	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
547L100	Remaining notes stack process error in TSK GS701 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547L200	Remaining notes stack process error in TSK GS702 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547L300	Remaining notes stack process error in TSK GS703,4 during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547LZ00	Remaining notes stack process error in TSK All during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
547M100	TSK Stopper Home position for intialize fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed
547M200	TSK Stopper Stack position for intialize fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed

Problem Code	Problem Description	Troubleshooting
547M300	TSK Stopper Return note position for initialize fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
547M400	TSK Stopper Lock FP Fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
547M500	TSK Stopper Unlock FP Fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
547P100	FP Sensor detect Dark Fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
547P200	FP Sensor detect Light Fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
547P300	PP Press position fail during Deposit Cancel	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
547Q700	TSK Door Open during operation in Deposit Cancel	1. Close the door of TSK(5)
547R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547RF00	TSK Feed Motor response timeout in Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547RP00	TSK PP response timeout in Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547RT00	TSK Stopper response timeout in Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547S200	TSK Receive undefined command in Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
547SR00	TSK Sub Task for Wait Setting Error in Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548HA01	GS801A Sensor Error during Deposit Cancel	1. Check GS801A2. Operate to initialize BRM(Recovery)
548HA02	GS801B Sensor Error during Deposit Cancel	1. Check GS801B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
548HA03	GS801A, GS801B Sensor Error during Deposit Cancel	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
548HA04	GS802A Sensor Error during Deposit Cancel	1. Check GS802A2. Operate to initialize BRM(Recovery)
548HA05	GS801A, GS802A Sensor Error during Deposit Cancel	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
548HA06	GS801B, GS802A Sensor Error during Deposit Cancel	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
548HA07	GS801A, GS801B, GS802A Sensor Error during Deposit Cancel	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
548HA08	GS802B Sensor Error during Deposit Cancel	1. Check GS802B2. Operate to initialize BRM(Recovery)
548HA09	GS801A, GS802B Sensor Error during Deposit Cancel	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
548HA10	GS801B, GS802B Sensor Error during Deposit Cancel	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
548HA11	GS801A, GS801B, GS802B Sensor Error during Deposit Cancel	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
548HA12	GS802A, GS802B Sensor Error during Deposit Cancel	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
548HA13	GS801A, GS802A, GS802B Sensor Error during Deposit Cancel	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
548HA14	GS801B, GS802A, GS802B Sensor Error during Deposit Cancel	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
548HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Deposit Cancel	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
548HB01	MR Sensor Level Error during Deposit Cancel	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
548HC02	UV_01 Sensor Level Error during Deposit Cancel	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
548HF03	CIS Shading data loading Fail during Deposit Cancel	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
548HF04	Detection DB Table loading Fail during Deposit Cancel	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
548HF05	BC FPGA Data checksum Fail during Deposit Cancel	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
548HF06	BC FPGA Configuration Fail during Deposit Cancel	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
548HF07	BC FPGA Header Information Loading Fail during Deposit Cancel	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
548HF08	BC FPGA Initialize Fail during Deposit Cancel	1. Re-download BC FPGA2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
548HF09	BC FPGA VERSION Fail during Deposit Cancel	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
548HF11	Detection DB #01 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF12	Detection DB #02 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF13	Detection DB #03 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF14	Detection DB #04 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF15	Detection DB #05 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF16	Detection DB #06 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF17	Detection DB #07 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF18	Detection DB #08 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF19	Detection DB #09 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HF20	Detection DB #10 loading Fail during Deposit Cancel	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
548HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Deposit Cancel	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Deposit Cancel	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG03	BC Transaction Ready Fail When Receive BC READY Command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
548HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Deposit Cancel	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Deposit Cancel	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Deposit Cancel	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG07	Receive BC Unknown Command during Deposit Cancel	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
548HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Deposit Cancel	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
548HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Deposit Cancel	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Deposit Cancel	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
548HG11	No Nation Code When Receive BC READY Command during Deposit Cancel	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Deposit Cancel	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
548HG20	Fail to Initialize CIS When Receive BC READY Command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
548HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
548HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
548HG23	DD Sensor DAC Set Error When Receive BC READY Command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
548HG24	ENCODER Mode Set Error When Receive BC READY Command during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
548HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Deposit Cancel	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Deposit Cancel	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Deposit Cancel	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Deposit Cancel	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Deposit Cancel	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
548HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Deposit Cancel	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
548HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Deposit Cancel	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
548HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command <small>위조지폐 목록 검색 구분 설정 오류</small> (Classification Value is Not 1, 2, 3 ) during Deposit Cancel	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Deposit Cancel	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
548HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Deposit Cancel	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
548HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Deposit Cancel	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
548HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Deposit Cancel	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Deposit Cancel	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Deposit Cancel	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Deposit Cancel	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Deposit Cancel	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Deposit Cancel	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG46	Bill Number Error When Receive Check No Write Command during Deposit Cancel	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Deposit Cancel	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
548HG48	Bill Number Table CRC Error When Receive Check No Write Command during Deposit Cancel	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Deposit Cancel	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HH01	Fail to Delete NAND FLASH during Deposit Cancel	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
548HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Deposit Cancel	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
548HH03	Fail to Download Detection DB during Deposit Cancel	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
548HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Deposit Cancel	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
548HH05	Detection DB Download File Check Error during Deposit Cancel	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
548HH06	Detection DB Download File Size Error during Deposit Cancel	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
548HH07	DB Table Save Error After Download Detection DB during Deposit Cancel	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
548HH08	Over Detection DB Download (Over 10) during Deposit Cancel	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
548HH09	Detection DB Header Information Error during Deposit Cancel	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
548HH10	EP Download Fail during Deposit Cancel	1. Re-download BC EP.2. Change the BC B/D if continuous error.
548HH11	EP Downlaod Check Error during Deposit Cancel	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
548HH12	EP Download File Size Error during Deposit Cancel	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
548HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Deposit Cancel	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
548HH14	BC FPGA Download Fail during Deposit Cancel	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
548HH15	Header Information Save Error After BC FPGA Download during Deposit Cancel	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
548HH16	Not Provide BC FPGA Download during Deposit Cancel	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
548HH17	EEPROM READ/WRITE Error during Deposit Cancel	1. Re-register and Re-Inquiry Unit Serial numbe.2. Change the BC B/D if continuous error.
548HH18	Receive Unit Serial Number Undefined Option during Deposit Cancel	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
548HH19	Receive USB Undefined Command during Deposit Cancel	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
548HH20	No BC Process Note When Receive Image Upload Command during Deposit Cancel	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH21	FC1 Set Error When Receive Image Upload Command during Deposit Cancel	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH22	BC is Processing Note When Receive Image Upload Command during Deposit Cancel	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH23	FC2 Set Error When Receive Image Upload Command during Deposit Cancel	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH24	Not Provide Total Image Upload Function during Deposit Cancel	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
548HH25	Not Provide Note Number Detection Image Upload Function during Deposit Cancel	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH26	FC2 Set Error When Receive Image Information Upload Command during Deposit Cancel	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Deposit Cancel	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Deposit Cancel	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit Cancel	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit Cancel	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit Cancel	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit Cancel	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
548HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Deposit Cancel	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
548HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Deposit Cancel	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
548HI01	RecogTask Messeage Timeout Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
548HI02	ScanTask Messeage Timeout Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
548HI03	UartTask Messeage Timeout Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
548HI04	BcUsbTask Messeage Timeout Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
548HJ01	Algorithm Initialize Fail during Deposit Cancel	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HJ02	Algorithm Ready Fail during Deposit Cancel	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HJ03	Algorithm Information Set Error during Deposit Cancel	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
548HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Deposit Cancel	1. Retry the operation
548HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Deposit Cancel	1. Check the number of CST Setting notes info
548HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Deposit Cancel	1. Check Withdrawal notes setting
548HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Deposit Cancel	1. Check Withdrawal notes info
548HS01	FPGA Write Data Error When Initialize Scan Driver during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS05	Not Process Shading When Initialize Scan Driver during Deposit Cancel	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
548HS08	Fail to Set DAC When Initialize Scan Driver during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS11	FPGA Write Data Error When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS13	Fail to Set CIS Led On Value When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS14	Fail to Set Source of Scan Ligh When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS15	Not Process Shading When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS17	Fail to Set AFE Chip When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS18	Fail to Set DAC When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS19	MR/UV/DD Sampling Start Error When BC Ready during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS1A	Fail to Set 2-Notes DAC When BC Ready during Deposit Cancel	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
548HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Deposit Cancel	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
548HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS28	Fail to Set DAC When Stop BC during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS29	MR/UV/DD Sampling Stop Error When Stop BC during Deposit Cancel	1. Retry the operation.2. Operate to initialize BRM(Recovery)
548HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Deposit Cancel	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
548HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Deposit Cancel	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
548HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Deposit Cancel	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
548HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Deposit Cancel	1. Retry the operation2. Change BC
548HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Deposit Cancel	1. Retry the operation2. Change BC
548HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Deposit Cancel	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC

Problem Code	Problem Description	Troubleshooting
548HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Deposit Cancel	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
548HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Deposit Cancel	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
548HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Deposit Cancel	1. Retry the operation2. Change BC
548HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Deposit Cancel	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
548HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Deposit Cancel	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
548HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Deposit Cancel	1. Retry the operation2. Change BC
548R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548S100	BCU response MI error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548S200	BCU response BCC error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548S300	BCU response Sub MI error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548S400	BCU response Parameter error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
548S900	BCU response Timeout Error during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
54A2100	Error occurred by notes remained in GS801 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
54A2200	Error occurred by notes remained in GS002 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2300	Error occurred by notes remained in GS003 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2400	Error occurred by notes remained in GS004 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2500	Error occurred by notes remained in GS005 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2600	Error occurred by notes remained in GS006 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2700	Error occurred by notes remained in GS014 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2800	Error occurred by notes remained in GS018 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2900	Error occurred by notes remained in GS020 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2A00	Error occurred by notes remained in GS021 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
54A2E00	Error occurred by notes remained in GS001 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2H00	Error occurred by notes remained in GS618 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2J00	Error occurred by notes remained in GS619 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2K00	Error occurred by notes remained in GS701,702 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2M00	Error occurred by notes remained in GSA01 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2N00	Error occurred by notes remained in GSA02 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2P00	Error occurred by notes remained in GSA03 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2Q00	Error occurred by notes remained in GSD01 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54A2W00	Error occurred by notes remained in GS802 during Deposit Cancel	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
54AA100	UTC open Error before operation Deposit Cancel	1. Open the upper unit. 2. Check the UTC removal and reinstallation
54AA200	TSK open Error before operation Deposit Cancel	1. Open the upper unit. 2. Check the TSK open and close
54AA300	BMU Inter Lock Error before operation Deposit Cancel	1. Check BMU open and close
54AA400	BMU open Error before operation Deposit Cancel	1. Check BMU open and close

Problem Code	Problem Description	Troubleshooting
54AA500	Replenishment CST open Error before operation Deposit Cancel	1. Check the Transit CST installation
54AA600	CSM open Error before operation Deposit Cancel	1. Open the upper unit. 2. Check CSM Open/Close
54AA800	BMD Inter Lock Error before operation Deposit Cancel	1. Open the lower unit. 2. Check the BMD open and close
54AA900	BMD open Error before operation Deposit Cancel	1. Open the lower unit. 2. Check the BMD open and close
54AAA00	BC Open Error before operation Deposit Cancel	1. Open the upper unit. 2. Check BC Open/Close
54AAB00	RC Full Error before operation Deposit Cancel	1. Open the lower unit. 2. Check RC Full and remove notes
54AAC00	RJC Full Error before operation Deposit Cancel	1. Open the upper unit. 2. Check RJC Full and remove notes
54AAD00	UTC Full Error before operation Deposit Cancel	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
54AAE00	RTC Full Error before operation Deposit Cancel	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
54AAF00	RC Empty Error before operation Deposit Cancel	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
54AAG00	Suspected note RC open Error before operation Deposit Cancel	1. Open the lower unit. 2. Check the RC removal and reinstall
54AAJ00	Deposit Cancel is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
54AE100	Received operation command without Initial Info Set during Deposit Cancel	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
54AE200	Status on not operation reception command during Deposit Cancel	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
54AE300	Received operation command without System Info Read during Deposit Cancel	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
54AE400	Transaction was executed without Initializing after power on during Deposit Cancel	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
54AEE00	RBU RS485 communication sequence disorder during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
54AEF00	RBU RS485 connection line disorder during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
54AEL00	RBU communication was not ready after power on during Deposit Cancel	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
54AH600	Failure to check clearing NVRAM during Deposit Cancel	1. Operate to initialize BRM(Recovery)
54ANC00	CSM stack count is more than that of TSK during deposit cancle	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
54AND00	In case of difference between separate TSK notes from TSK after Deposit Cancel and stack notes to TSK after Deposit Cancel	1. Operate to initialize BRM(Recovery)
54AR100	Message timeout error during operation ready during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54AR200	Message timeout error during transaction operation during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54AR300	Message timeout error during error postprocessing during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54AR800	RBU/BC sensor auto dimming response message timeout error during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54ARC00	BC response message timeout error during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54ARJ00	Message timeout error during Stop Ready during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54BR000	RBU Response Timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54BR700	RBU Response Message Timeout during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54BS100	RBU RS-232 Seq Num Echo Error during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54BS200	RBU RS-232 MI Echo Error during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54BSS00	RBU Auto Calibration Command Parameter Error during Deposit Cancel	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
54CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
54ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
54ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
54ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
54ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
54US100	USB Bulk Sequence Error during Deposit Cancel.	1. Restart over AP-SP
54US300	USB Bulk Received Length Error during Deposit Cancel.	1. Reboot the system
54US400	Message transmission Error from USB to Main Task during Deposit Cancel.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
54US500	Message reception Error from MainTask to USB during Deposit Cancel.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
54USCMD	Bulk command data check error during Deposit Cancel. (USB communication failure)	1. Restart over AP-SP
54USCRC	CRC data check error during Deposit Cancel. (USB communication failure)	1. Restart over AP-SP
54USLEN	Bulk length error during Deposit Cancel. (USB communication failure)	1. Restart over AP-SP
5500100	GS801 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5500200	GS002 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500300	GS003 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500400	GS004 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5500500	GS005 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500600	GS006 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500700	GS014 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500800	GS018 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500900	GS020 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500A00	GS021 Light Jam error during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5500E00	GS001 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500H00	GS618 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500J00	GS619 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5500M00	GSA01 Light Jam error during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5500N00	GSA02 Light Jam error during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5500P00	GSA03 Light Jam error during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

5505900	GS020 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5505A00	GS021 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5505C00	GS030 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5505E00	GS001 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5505H00	GS618 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5505J00	GS619 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5505M00	GSA01 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5505N00	GSA02 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5505P00	GSA03 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5505Q00	GSD01 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5505W00	GS802 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506100	GS801 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5506200	GS002 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506300	GS003 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506400	GS004 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506500	GS005 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506600	GS006 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506700	GS014 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506800	GS018 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5506900	GS020 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5506A00	GS021 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5506C00	GS030 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5507J00	Error occurred by the notes disorder in GS619 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5507M00	Error occurred by the notes disorder in GSA01 during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5507N00	Error occurred by the notes disorder in GSA02 during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5507P00	Error occurred by the notes disorder in GSA03 during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5507Q00	Error occurred by the notes disorder in GSD01 during Withdrawal for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5507W00	Error occurred by the notes disorder in GS802 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
550D100	Reject excess error (continue Reject error) during Withdrawal for adjustment	1. Check the Rejected denomination during Withdrawal for adjustment(Including denomination which did not set up in the cassette)
550D200	Reject excess error (notes excess error) during Withdrawal for adjustment	1. Check the Rejected denomination during Withdrawal for adjustment(Including denomination which did not set up in the cassette)

Problem Code	Problem Description	Troubleshooting
550D300	Reject excess error (Unappointed notes error) during Withdrawal for adjustment	1. Check the Rejected denomination during Withdrawal for adjustment(Including denomination which did not set up in the cassette)
550D400	Reject excess error (Cassette note error) during Withdrawal for adjustment	1. Check the Rejected denomination during Withdrawal for adjustment(Including denomination which did not set up in the cassette)
550D500	Reject excess error (2notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550D600	Reject excess error (Gap error(1note)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550D700	Reject excess error (Gap error(2notes)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550D800	Reject excess error (skew error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550D900	Reject excess error (shift error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550DA00	Reject excess error (Max length error(1note)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550DB00	Reject excess error (Max length error(2notes)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550DC00	Reject excess error (Max length error(3notes)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550DD00	Reject excess error (Max length error(4notes)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550DE00	Reject excess error (Min length error(1note)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
550DF00	Reject excess error (Min length error(2notes)) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution

Problem Code	Problem Description	Troubleshooting
550DG00	Reject excess error (note error) during Withdrawal for adjustment	1. Check the Rejected denomination during Withdrawal for adjustment(Including denomination which did not set up in the cassette)
550DH00	Reject excess error (MR error) during Withdrawal for adjustment	1. Check the Rejected Notes during Withdrawal for adjustment(Failure to Notes recognition)
550DJ00	Reject excess error (IR error) during Withdrawal for adjustment	1. Check the Rejected Notes during Withdrawal for adjustment(Failure to Notes recognition)
550DK00	Reject excess error (Edge error) during Withdrawal for adjustment	1. Check the Rejected Notes during Withdrawal for adjustment(Failure to Notes recognition)
550DL00	Reject excess error (Image error) during Withdrawal for adjustment	1. Check the Rejected Notes during Withdrawal for adjustment(Failure to Notes recognition)
550DM00	Reject excess error (UV error) during Withdrawal for adjustment	1. Check the Rejected Notes during Withdrawal for adjustment(Failure to Notes recognition)
550DN00	Reject excess error (Sensor error) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DO00	Deposit count disallowed notes reject excess error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DP00	Reject excess error (Communication error) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DQ00	Reject excess error (Full & etc) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DR00	Recognition Fail Error (Recognition test fail) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DS00	Recognition Fail Error (No Recognition info) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DT00	Recognition Fail Error (Only STX in Recognition info) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DU00	Recognition Fail Error (Recognition info BCC NG) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DV00	Recognition Fail Error (Recognition info MI NG) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DW00	Recognition Fail Error (Recognition info Index Fail) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DX00	Recognition Fail Error (Info BC Pass Info) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550DY00	Recognition Fail Error (Serial Number Data Format error) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550F100	GM001 motor doesn't operate at a constant speed when the motor works during Withdrawal for adjustment	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
550F200	GM002 motor doesn't operate at a constant speed when the motor works during Withdrawal for adjustment	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
550F400	GM004 motor doesn't operate at a constant speed when the motor works during Withdrawal for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
550F600	GM006 motor doesn't operate at a constant speed when the motor works during Withdrawal for adjustment	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
550F700	GM007 motor doesn't operate at a constant speed when the motor works during Withdrawal for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
550F900	GM009 motor doesn't operate at a constant speed when the motor works during Withdrawal for adjustment	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
550FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal for adjustment	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
550FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal for adjustment	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
550FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
550FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal for adjustment	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
550FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
550FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal for adjustment	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
550FY00	Fail to Start BM Low Speed Control during Withdrawal for adjustment (Motor Encoder Error)	1. Open the lower, upper unit2. Check remained Notes and substance in the upper, lower Transport Path3. Check motor encoder sensors4. Initialize
550G100	Failure to 3Way Gate 0 degree mode conversion during Withdrawal for adjustment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
550G200	Failure to 3Way Gate 120 degree mode conversion during Withdrawal for adjustment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize

Problem Code	Problem Description	Troubleshooting
550GB00	Time Out to 3Way Gate Mode conversion during Withdrawal for adjustment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
550GC00	Failure to RTRJ Gate RJC Mode conversion during Withdrawal for adjustment	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
550GD00	Failure to RTRJ Gate RTC Mode conversion during Withdrawal for adjustment	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
550J200	Box full detection error during Withdrawal for adjustment	1. Open the lower unit2. Open MID Transport(7)3. Check CST inside whether Full or not
550J300	RC assigned by OC(Operation Cassette) Separation End during Withdrawal for adjustment	1. Normal Status
550K100	Duplication S/N Error during Withdrawal for adjustment	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
550N400	Jam Message Receive Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
550NA00	Checksum error when notes separate from TSK during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
550NC00	length different from separation part to stack part after transport during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
550NK00	BC recognized notes have no cassette to be stacked during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
550Q100	UTC detachment Error during Withdrawal for adjustment	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
550Q200	TSK detachment Error during Withdrawal for adjustment	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
550Q300	BMU Inter Lock Error during Withdrawal for adjustment	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
550Q400	BMU detackment Error during Withdrawal for adjustment	1. Check Load/Removal of the upper unit
550Q500	Replenishment CST detachment Error during Withdrawal for adjustment	1. Check the safe door open
550Q600	CSM detackment Error during Withdrawal for adjustment	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
550Q800	BMD Inter Lock Error during Withdrawal for adjustment	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
550Q900	BMD detachment Error during Withdrawal for adjustment	1. Check the lower Unit load/removal

Problem Code	Problem Description	Troubleshooting
550QA00	BC Open Error during Withdrawal for adjustment	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
550QS00	Receive Error Stop CMD during Withdrawal for adjustment	1. Initialize
550R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
550R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
550R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
550SZ00	Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5510100	RC1 GS101 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5510200	RC1 GS102 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5510500	RC1 GS105 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5510Z00	RC1 All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5511100	RC1 GS101 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5511200	RC1 GS102 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5511500	RC1 GS105 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5511Z00	All RC1 Sensor Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5512100	Error occurred by notes remained in RC1 GS101 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5512200	Error occurred by notes remained in RC1 GS102 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5512500	Error occurred by notes remained in RC1 GS105 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5512Z00	Error occurred by notes remained in All RC1 Sensor during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5513100	RC1 GS101 Sensor auto calibration error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5513200	RC1 GS102 Sensor auto calibration error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5513500	RC1 GS105 Sensor auto calibration error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5513Z00	All RC1 Sensor auto calibration error during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5514100	RC1 GS101 Extern lights check error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5514200	RC1 GS102 Extern lights check error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5514500	RC1 GS105 Extern lights check error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5514Z00	All RC1 Sensor Extern lights check error during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5515100	RC1 GS101 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5515200	RC1 GS102 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5515500	RC1 GS105 Path error on transport path during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5515Z00	All RC1 Sensor Path error on transport path during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5516100	RC1 GS101 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5516200	RC1 GS102 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5516500	RC1 GS105 Path error on sensor except for transport path during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5516Z00	RC1 All Path error on sensor except for transport path during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5517100	Error occurred by the notes disorder in RC1 GS101 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5517200	Error occurred by the notes disorder in RC1 GS102 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5517500	Error occurred by the notes disorder in RC1 GS105 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5517Z00	Error occurred by the notes disorder in RC1 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
551C100	RC Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
551C200	Exceeded number of retries for RC1 separation error during Withdrawal for adjustment.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
551C400	RC1 Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
551G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
551G200	RC1 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(A) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
551G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(A) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
551G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551G600	RC1 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
551GA00	RC1 Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
551GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
551GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
551GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
551GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
551GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551GK00	RC1 Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
551GQ00	RJC Press and Stack position fail during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
551GR00	RJC Stack position fail during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
551GS00	RC1 RJC Press position fail during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
551GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
551GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
551GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
551GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
551GX00	RC1 GS101 detects notes during RJC intialize during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
551J100	RJC Full during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
551J200	RC1 No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
551J300	Full,Bottom no detect before move RC1 PP to stack position during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
551K100	RC1 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
551NL00	RC1 Requested notes is more than Residue notes,separation stop during Withdrawal for adjustment	1. Check RC1 actual count and SPL screen count.2. Setting RC1 count match actual count.3. Operate to initialize BRM(Recovery)
551R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
551RF00	RC1 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551RP00	RC1 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551S200	RC1 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551S300	RC1 Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551SA00	RC1 Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551SR00	RC1 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
551SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5520100	RC2 GS201 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5520200	RC2 GS202 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5520500	RC2 GS205 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5520Z00	RC2 All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5521100	RC2 GS201 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5521200	RC2 GS202 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5521500	RC2 GS205 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5521Z00	RC2 All Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5522100	Error occurred by notes remained in RC2 GS201 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5522200	Error occurred by notes remained in RC2 GS202 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5522500	Error occurred by notes remained in RC2 GS205 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5522Z00	Error occurred by notes remained in RC2 All Sensor during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5523100	Sensor auto calibration error in RC2 GS201 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5523200	Sensor auto calibration error in RC2 GS202 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5523500	Sensor auto calibration error in RC2 GS205 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5523Z00	Sensor auto calibration error in RC2 All Sensor during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5524100	Extern lights check error in RC2 GS201 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5524200	Extern lights check error in RC2 GS202 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5524500	Extern lights check error in RC2 GS205 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5524Z00	Extern lights check error in RC2 All Sensor during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5525100	Path error on transport path in RC2 GS201 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5525200	Path error on transport path in RC2 GS202 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5525500	Path error on transport path in RC2 GS205 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5525Z00	Path error on transport path in RC2 All Sensor during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5526100	Path error on sensor except for transport path in RC2 GS201 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5526200	Path error on sensor except for transport path in RC2 GS202 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5526500	Path error on sensor except for transport path in RC2 GS205 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5526Z00	Path error on sensor except for transport path in RC2 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5527100	Error occurred by the notes disorder in RC2 GS201 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5527200	Error occurred by the notes disorder in RC2 GS202 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5527500	Error occurred by the notes disorder in RC2 GS205 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5527Z00	Error occurred by the notes disorder in RC2 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
552C100	RC2 Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check the upper and the notes.
552C200	Exceeded number of retries for RC2 separation error during Withdrawal for adjustment.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check the upper and the notes.
552C400	RC2 Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
552G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
552G200	RC2 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
552G400	RC2 Failure to upword moving of PP during RC2 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
552G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552G600	RC2 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
552GA00	RC2 Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
552GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
552GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
552GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
552GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
552GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552GK00	RC2 Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
552J200	RC2 No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
552J300	RC2 Full,Bottom no detect before move RC PP to stack position during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
552K100	RC2 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
552NL00	RC2 Requested notes is more than Residue notes, separation stop during Withdrawal for adjustment	1. Check RC2 actual count and SPL screen count.2. Setting RC2 count match actual count.3. Operate to initialize BRM(Recovery)
552R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552RF00	RC2 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552RP00	RC2 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552S200	RC2 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552S300	RC2 Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552SA00	RC2 Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552SR00	RC2 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
552SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5530100	RC3 GS301 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5530200	RC3 GS302 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5530500	RC3 GS305 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).

Problem Code	Problem Description	Troubleshooting
5530Z00	RC3 All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5531100	RC3 GS301 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5531200	RC3 GS302 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5531500	RC3 GS305 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5531Z00	RC3 All Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5532100	Error occurred by notes remained in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5532200	Error occurred by notes remained in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5532500	Error occurred by notes remained in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5532Z00	Error occurred by notes remained in RC3 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5533100	Sensor auto calibration error in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5533200	Sensor auto calibration error in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5533500	Sensor auto calibration error in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5533Z00	Sensor auto calibration error in RC3 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5534100	Extern lights check error in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5534200	Extern lights check error in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5534500	Extern lights check error in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5534Z00	Extern lights check error in RC3 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5535100	Path error on transport path in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5535200	Path error on transport path in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5535500	Path error on transport path in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5535Z00	Path error on transport path in RC3 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5536100	Path error on sensor except for transport path in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5536200	Path error on sensor except for transport path in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5536500	Path error on sensor except for transport path in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5536Z00	Path error on sensor except for transport path in RC3 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5537100	Error occurred by the notes disorder in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5537200	Error occurred by the notes disorder in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5537500	Error occurred by the notes disorder in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5537Z00	Error occurred by the notes disorder in RC3 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
553C100	RC3 Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check the upper and the notes.
553C200	Exceeded number of retries for RC3 separation error during Withdrawal for adjustment.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check the upper and the notes.
553C400	RC3 Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
553G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
553G200	RC3 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
553G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
553G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553G600	RC3 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
553G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
553GA00	RC3 RC Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
553GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
553GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
553GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
553GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
553GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
553J200	RC3 No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C)5. Fill up the Notes if there are no notes
553J300	RC3 Full,Bottom no detect before move RC PP to stack position during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
553K100	RC3 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
553L100	Remaining notes stack process error in RC3 GS301 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
553L200	Remaining notes stack process error in RC3 GS302 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
553L500	Remaining notes stack process error in RC3 GS305 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
553NL00	RC3 Requested notes is more than Residue notes,separation stop during Withdrawal for adjustment	1. Check RC3 actual count and SPL screen count.2. Setting RC3 count match actual count.3. Operate to initialize BRM(Recovery)
553R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553RF00	RC3 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553RP00	RC3 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
553S200	RC3 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553S300	RC3 RC Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553SA00	RC3 RC Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553SR00	RC3 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
553SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5540100	RC4 GS401 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5540200	RC4 GS402 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5540500	RC4 GS405 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5540Z00	RC4 All Sensor Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5541100	RC4 GS401 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5541200	RC4 GS402 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5541500	RC4 GS405 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5541Z00	RC4 All Sensor Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5542100	Error occurred by notes remained in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5542200	Error occurred by notes remained in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5542500	Error occurred by notes remained in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5542Z00	Error occurred by notes remained in RC4 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5543100	Sensor auto calibration error in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5543200	Sensor auto calibration error in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5543500	Sensor auto calibration error in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5543Z00	Sensor auto calibration error in RC4 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5544100	Extern lights check error in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5544200	Extern lights check error in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5544500	Extern lights check error in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5544Z00	Extern lights check error in RC4 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5545100	Path error on transport path in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5545200	Path error on transport path in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5545500	Path error on transport path in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5545Z00	Path error on transport path in RC4 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5546100	Path error on sensor except for transport path in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5546200	Path error on sensor except for transport path in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5546500	Path error on sensor except for transport path in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5546Z00	Path error on sensor except for transport path in RC4 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5547100	Error occurred by the notes disorder in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5547200	Error occurred by the notes disorder in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5547500	Error occurred by the notes disorder in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5547Z00	Error occurred by the notes disorder in RC4 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
554C100	RC4 Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check the upper and the notes.
554C200	Exceeded number of retries for RC4 separation error during Withdrawal for adjustment.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check the upper and the notes.
554C400	RC4 Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
554G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
554G200	RC4 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(D). 4. Open the recycle cassette door(D).5. Check cassette status to move stage up and down.
554G400	RC4 Failure to upword moving of PP during RC4 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(D). 4. Open the recycle cassette door(D).5. Check cassette status to move stage up and down.
554G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554G600	RC4 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
554GA00	RC4 RC Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
554GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
554GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
554GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
554GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
554GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
554J200	RC4 No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D).5. Fill up the Notes if there are no notes
554J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
554K100	RC4 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
554L100	Remaining notes stack process error in RC4 GS401 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
554L200	Remaining notes stack process error in RC4 GS402 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
554L500	Remaining notes stack process error in RC4 GS405 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
554NL00	RC4 Requested notes is more than Residue notes, separation stop during Withdrawal for adjustment	1. Check RC4 actual count and SPL screen count.2. Setting RC4 count match actual count.3. Operate to initialize BRM(Recovery)
554R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554RF00	RC4 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554RP00	RC4 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554S200	RC4 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554S300	RC4 RC Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554SA00	RC4 RC Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
554SR00	RC4 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
554SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5550100	RC5 GS501 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5550200	RC5 GS502 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5550500	RC5 GS505 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5550Z00	RC5 All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5551100	RC5 GS501 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5551200	RC5 GS502 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5551500	RC5 GS505 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5551Z00	RC5 All Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5552100	Error occurred by notes remained in RC5 GS501 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5552200	Error occurred by notes remained in RC5 GS502 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5552500	Error occurred by notes remained in RC5 GS505 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5552Z00	Error occurred by notes remained in RC5 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5553100	Sensor auto calibration error in RC5 GS501 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

5555100	Path error on transport path in RC5 GS501 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5555200	Path error on transport path in RC5 GS502 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5555500	Path error on transport path in RC5 GS505 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5555Z00	Path error on transport path in RC5 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5556100	Path error on sensor except for transport path in RC5 GS501 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5556200	Path error on sensor except for transport path in RC5 GS502 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5556500	Path error on sensor except for transport path in RC5 GS505 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5556Z00	Path error on sensor except for transport path in RC5 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
5557100	Error occurred by the notes disorder in RC5 GS501 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5557200	Error occurred by the notes disorder in RC5 GS502 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5557500	Error occurred by the notes disorder in RC5 GS505 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5557Z00	Error occurred by the notes disorder in RC5 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
555C100	RC5 Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check the upper and the notes.
555C200	Exceeded number of retries for RC5 separation error during Withdrawal for adjustment.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check the upper and the notes.
555C400	RC5 Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
555G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
555G200	RC5 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.
555G400	RC5 Failure to upward moving of PP during RC5 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.
555G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555G600	RC5 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
555GA00	RC5 Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
555GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
555GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
555GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
555GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555GK00	RC5 Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
555J200	RC5 No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E)5. Fill up the Notes if there are no notes
555J300	RC5 Full,Bottom no detect before move RC PP to stack position during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
555K100	RC5 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
555L100	Remaining notes stack process error in RC5 GS501 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
555L200	Remaining notes stack process error in RC5 GS502 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
555L500	Remaining notes stack process error in RC5 GS505 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
555NL00	RC5 Requested notes is more than Residue notes,separation stop during Withdrawal for adjustment	1. Check RC5 actual count and SPL screen count.2. Setting RC5 count match actual count.3. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
555R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555RF00	RC5 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555RP00	RC5 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555S200	RC5 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555S300	RC5 Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555SA00	RC5 Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555SR00	RC5 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
555SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5561H00	GS618/619 Dark Jam error during Withdrawal for adjustment.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5562100	CSM Residue Error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5562300	CSM insert notes excess Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recover open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5562500	CSM notes disappear Error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5562600	CSM notes appear Error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5562Z00	CSM Residue Error during during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
556G100	Fail to move CSM BP to Stack Position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
556G200	Fail to move CSM BP to Deposit Position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
556G300	Fail to move CSM BP to Separation Position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
556G500	Fail to move CSM BP to Note-Out Position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
556G600	Fail to move CSM P-Roller to Home position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
556G800	Fail to CSM return notes during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
556G900	CSM GM601 Step out during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
556GA00	Fail to move CSM BP to return note Position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
556GB00	Fail to move CSM FP to Deposit Position during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
556GF00	Fail to move CSM G-Roller to Homeposition during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
556GG00	Fail to move both CSM P/G-Roller to Homeposition during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status

Problem Code	Problem Description	Troubleshooting
556M200	CSM Inner Shutter Open Error during Withdrawal for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
556M300	CSM Inner Shutter Close Error during Withdrawal for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
556M400	CSM Outer Shutter Open Error during Withdrawal for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
556M500	CSM Outer Shutter Close Error during Withdrawal for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
556M600	CSM Outer Shutter is Opened during Withdrawal for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
556M700	CSM Inner Shutter Open during Stack during Withdrawal for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
556M800	CSM Stopper Home position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
556M900	CSM Stopper Stack position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
556MB00	CSM Bill Supporter Up position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
556MC00	CSM Bill Supporter Down position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
556P100	CSM PP Withdrawal(Stack) position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
556P200	CSM PP Deposit position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556P300	CSM PP Separation position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556P400	CSM PP collect lost notes position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556P500	CSM PP Note-out position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556P600	CSM PP Note-arrange position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556P800	CSM PP Control Stack Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556P900	CSM PP Return note position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556PD00	CSM PP Check semi-note Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
556PE00	CSM PP Bill SuCSM PPorter Up position Fail during Withdrawal for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
556R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5571Z00	TSK All Dark Jam during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5572100	Error occurred by notes remained in TSK GS701 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5572200	Error occurred by notes remained in TSK GS702 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5572300	Error occurred by notes remained in TSK GS703,4 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5572Z00	Error occurred by notes remained in TSK All Sensor during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5575100	GS701 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5575200	GS702 Path error on transport path during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5577100	Error occurred by the notes disorder in GS701 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5577200	Error occurred by the notes disorder in GS702 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5577300	Error occurred by the notes disorder in TSK GS703,4 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5577Z00	Error occurred by the notes disorder in TSK All during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
557C200	TSK Last note unclear during separation during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
557CA00	TSK Incounted note is not Outcounted for 500ms during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
557F200	TSK GM701 stepout during stack during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
557F300	TSK GM701 F-Roller Homeposition fail during Withdrawal for adjustment	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
557G100	GM701 Return notes fail during Withdrawal for adjustment	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
557J100	TSK Full during Withdrawal for adjustment	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
557L100	Remaining notes stack process error in TSK GS701 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
557L200	Remaining notes stack process error in TSK GS702 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
557L300	Remaining notes stack process error in TSK GS703,4 during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
557LZ00	Remaining notes stack process error in TSK All during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
557M100	TSK Stopper Home position for intialze fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
557M200	TSK Stopper Stack position for intialze fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
557M300	TSK Stopper Return note position for intialze fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed

Problem Code	Problem Description	Troubleshooting
557M400	TSK Stopper Lock FP Fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
557M500	TSK Stopper Unlock FP Fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
557P100	FP Sensor detect Dark Fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
557P200	FP Sensor detect Light Fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
557P300	PP Press position fail during Withdrawal for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
557Q700	TSK Door Open during operation in Withdrawal for adjustment	1. Close the door of TSK(5)
557Q800	TSK Door Lock fail during operation in Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Retry the operation.
557R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557RF00	TSK Feed Motor response timeout in Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557RP00	TSK PP response timeout in Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557RT00	TSK Stopper response timeout in Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557S200	TSK Receive undefined command in Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
557SR00	TSK Sub Task for Wait Setting Error in Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558HA01	GS801A Sensor Error during Withdrawal for adjustment	1. Check GS801A2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
558HA02	GS801B Sensor Error during Withdrawal for adjustment	1. Check GS801B2. Operate to initialize BRM(Recovery)
558HA03	GS801A, GS801B Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
558HA04	GS802A Sensor Error during Withdrawal for adjustment	1. Check GS802A2. Operate to initialize BRM(Recovery)
558HA05	GS801A, GS802A Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
558HA06	GS801B, GS802A Sensor Error during Withdrawal for adjustment	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
558HA07	GS801A, GS801B, GS802A Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
558HA08	GS802B Sensor Error during Withdrawal for adjustment	1. Check GS802B2. Operate to initialize BRM(Recovery)
558HA09	GS801A, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
558HA10	GS801B, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
558HA11	GS801A, GS801B, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
558HA12	GS802A, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
558HA13	GS801A, GS802A, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
558HA14	GS801B, GS802A, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
558HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Withdrawal for adjustment	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
558HB01	MR Sensor Level Error during Withdrawal for adjustment	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
558HC02	UV_01 Sensor Level Error during Withdrawal for adjustment	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
558HF03	CIS Shading data loading Fail during Withdrawal for adjustment	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
558HF04	Detection DB Table loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF05	BC FPGA Data checksum Fail during Withdrawal for adjustment	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
558HF06	BC FPGA Configuration Fail during Withdrawal for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
558HF07	BC FPGA Header Information Loading Fail during Withdrawal for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
558HF08	BC FPGA Initialize Fail during Withdrawal for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
558HF09	BC FPGA VERSION Fail during Withdrawal for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
558HF11	Detection DB #01 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF12	Detection DB #02 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF13	Detection DB #03 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF14	Detection DB #04 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF15	Detection DB #05 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF16	Detection DB #06 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF17	Detection DB #07 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF18	Detection DB #08 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF19	Detection DB #09 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HF20	Detection DB #10 loading Fail during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
558HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Withdrawal for adjustment	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Withdrawal for adjustment	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG03	BC Transaction Ready Fail When Receive BC READY Command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
558HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Withdrawal for adjustment	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Withdrawal for adjustment	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Withdrawal for adjustment	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG07	Receive BC Unknown Command during Withdrawal for adjustment	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
558HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Withdrawal for adjustment	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Withdrawal for adjustment	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Withdrawal for adjustment	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
558HG11	No Nation Code When Receive BC READY Command during Withdrawal for adjustment	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Withdrawal for adjustment	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
558HG20	Fail to Initialize CIS When Receive BC READY Command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
558HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
558HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
558HG23	DD Sensor DAC Set Error When Receive BC READY Command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
558HG24	ENCODER Mode Set Error When Receive BC READY Command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
558HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Withdrawal for adjustment	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Withdrawal for adjustment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Withdrawal for adjustment	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Withdrawal for adjustment	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
558HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Withdrawal for adjustment	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Withdrawal for adjustment	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Withdrawal for adjustment	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Withdrawal for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Withdrawal for adjustment	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Withdrawal for adjustment	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Withdrawal for adjustment	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Withdrawal for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Withdrawal for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Withdrawal for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Withdrawal for adjustment	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Withdrawal for adjustment	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Withdrawal for adjustment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG46	Bill Number Error When Receive Check No Write Command during Withdrawal for adjustment	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
558HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Withdrawal for adjustment	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG48	Bill Number Table CRC Error When Receive Check No Write Command during Withdrawal for adjustment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Withdrawal for adjustment	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HH01	Fail to Delete NAND FLASH during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
558HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Withdrawal for adjustment	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
558HH03	Fail to Download Detection DB during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
558HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Withdrawal for adjustment	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
558HH05	Detection DB Download File Check Error during Withdrawal for adjustment	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
558HH06	Detection DB Download File Size Error during Withdrawal for adjustment	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
558HH07	DB Table Save Error After Download Detection DB during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
558HH08	Over Detection DB Download (Over 10) during Withdrawal for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
558HH09	Detection DB Header Information Error during Withdrawal for adjustment	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
558HH10	EP Download Fail during Withdrawal for adjustment	1. Re-download BC EP.2. Change the BC B/D if continuous error.
558HH11	EP Download Check Error during Withdrawal for adjustment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
558HH12	EP Download File Size Error during Withdrawal for adjustment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
558HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Withdrawal for adjustment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
558HH14	BC FPGA Download Fail during Withdrawal for adjustment	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
558HH15	Header Information Save Error After BC FPGA Download during Withdrawal for adjustment	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
558HH16	Not Provide BC FPGA Download during Withdrawal for adjustment	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
558HH17	EEPROM READ/WRITE Error during Withdrawal for adjustment	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
558HH18	Receive Unit Serial Number Undefined Option during Withdrawal for adjustment	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
558HH19	Receive USB Undefined Command during Withdrawal for adjustment	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
558HH20	No BC Process Note When Receive Image Upload Command during Withdrawal for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH21	FC1 Set Error When Receive Image Upload Command during Withdrawal for adjustment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH22	BC is Processing Note When Receive Image Upload Command during Withdrawal for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH23	FC2 Set Error When Receive Image Upload Command during Withdrawal for adjustment	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH24	Not Provide Total Image Upload Function during Withdrawal for adjustment	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
558HH25	Not Provide Note Number Detection Image Upload Function during Withdrawal for adjustment	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH26	FC2 Set Error When Receive Image Information Upload Command during Withdrawal for adjustment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Withdrawal for adjustment	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Withdrawal for adjustment	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal for adjustment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal for adjustment	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
558HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Withdrawal for adjustment	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal for adjustment	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
558HI01	RecogTask Messeage Timeout Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
558HI02	ScanTask Messeage Timeout Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
558HI03	UartTask Messeage Timeout Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
558HI04	BcUsbTask Messeage Timeout Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
558HJ01	Algorithm Initialize Fail during Withdrawal for adjustment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HJ02	Algorithm Ready Fail during Withdrawal for adjustment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HJ03	Algorithm Information Set Error during Withdrawal for adjustment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
558HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Withdrawal for adjustment	1. Retry the operation
558HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Withdrawal for adjustment	1. Check the number of CST Setting notes info
558HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Withdrawal for adjustment	1. Check Withdrawal notes setting
558HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Withdrawal for adjustment	1. Check Withdrawal notes info
558HS01	FPGA Write Data Error When Initialize Scan Driver during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
558HS05	Not Process Shading When Initialize Scan Driver during Withdrawal for adjustment	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
558HS08	Fail to Set DAC When Initialize Scan Driver during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS11	FPGA Write Data Error When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS13	Fail to Set CIS Led On Value When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS14	Fail to Set Source of Scan Ligh When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS15	Not Process Shading When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS17	Fail to Set AFE Chip When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS18	Fail to Set DAC When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS19	MR/UV/DD Sampling Start Error When BC Ready during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS1A	Fail to Set 2-Notes DAC When BC Ready during Withdrawal for adjustment	1. Check whether double notes sensor is contaminant or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
558HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Withdrawal for adjustment	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
558HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS28	Fail to Set DAC When Stop BC during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS29	MR/UV/DD Sampling Stop Error When Stop BC during Withdrawal for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
558HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Withdrawal for adjustment	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
558HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Withdrawal for adjustment	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
558HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Withdrawal for adjustment	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
558HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Withdrawal for adjustment	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
558HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Withdrawal for adjustment	1. Retry the operation2. Change BC
558HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Withdrawal for adjustment	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
558HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Withdrawal for adjustment	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
558HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Withdrawal for adjustment	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
558HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Withdrawal for adjustment	1. Retry the operation2. Change BC
558HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Withdrawal for adjustment	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
558HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Withdrawal for adjustment	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
558HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Withdrawal for adjustment	1. Retry the operation2. Change BC
558R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558S100	BCU response MI error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558S200	BCU response BCC error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558S300	BCU response Sub MI error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558S400	BCU response Parameter error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
558S900	BCU response Timeout Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
55A2100	Error occurred by notes remained in GS801 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2200	Error occurred by notes remained in GS002 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2300	Error occurred by notes remained in GS003 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2400	Error occurred by notes remained in GS004 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2500	Error occurred by notes remained in GS005 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2600	Error occurred by notes remained in GS006 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2700	Error occurred by notes remained in GS014 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2800	Error occurred by notes remained in GS018 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2900	Error occurred by notes remained in GS020 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2A00	Error occurred by notes remained in GS021 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
55A2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2E00	Error occurred by notes remained in GS001 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2H00	Error occurred by notes remained in GS618 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2J00	Error occurred by notes remained in GS619 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2K00	Error occurred by notes remained in GS701,702 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2M00	Error occurred by notes remained in GSA01 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2N00	Error occurred by notes remained in GSA02 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2P00	Error occurred by notes remained in GSA03 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2Q00	Error occurred by notes remained in GSD01 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55A2W00	Error occurred by notes remained in GS802 during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
55AA100	UTC open Error before operation Withdrawal for adjustment	1. Open the upper unit. 2. Check the UTC removal and reinstallation

Problem Code	Problem Description	Troubleshooting
55AA200	TSK open Error before operation Withdrawal for adjustment	1. Open the upper unit. 2. Check the TSK open and close
55AA300	BMU Inter Lock Error before operation Withdrawal for adjustment	1. Check BMU open and close
55AA400	BMU open Error before operation Withdrawal for adjustment	1. Check BMU open and close
55AA500	Replenishment CST open Error before operation Withdrawal for adjustment	1. Check the Transit CST installation
55AA600	CSM open Error before operation Withdrawal for adjustment	1. Open the upper unit. 2. Check CSM Open/Close
55AA800	BMD Inter Lock Error before operation Withdrawal for adjustment	1. Open the lower unit. 2. Check the BMD open and close
55AA900	BMD open Error before operation Withdrawal for adjustment	1. Open the lower unit. 2. Check the BMD open and close
55AAA00	BC Open Error before operation Withdrawal for adjustment	1. Open the upper unit. 2. Check BC Open/Close
55AAB00	RC Full Error before operation Withdrawal for adjustment	1. Open the lower unit. 2. Check RC Full and remove notes
55AAC00	RJC Full Error before operation Withdrawal for adjustment	1. Open the upper unit. 2. Check RJC Full and remove notes
55AAD00	UTC Full Error before operation Withdrawal for adjustment	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
55AAE00	RTC Full Error before operation Withdrawal for adjustment	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
55AAF00	RC Empty Error before operation Withdrawal for adjustment	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
55AAG00	Suspected note RC open Error before operation Withdrawal for adjustment	1. Open the lower unit. 2. Check the RC removal and reinstall
55AAJ00	Withdrawal for adjustment is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
55AAQ00	Reject position is set to UTC in the UTC disabled mode during Withdrawal for adjustment.	1. Check the Status of Cassette setting2. Initialize
55AE100	Received operation command without Initial Info Set during Withdrawal for adjustment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
55AE200	Status on not operation reception command during Withdrawal for adjustment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
55AE300	Received operation command without System Info Read during Withdrawal for adjustment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
55AE400	Transaction was executed without Initializing after power on during Withdrawal for adjustment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization

55AEE00	RBU RS485 communication sequence disorder during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
55AEF00	RBU RS485 connection line disorder during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
55AEL00	RBU communication was not ready after power on during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
55AH600	Failure to check clearing NVRAM during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
55AHF00	Transaction count exists but GS801A sensor no change during Withdrawal for adjustment	1. Check GS801A2. Operate to initialize BRM(Recovery)
55AHG00	Transaction count exists but GS801B sensor no change during Withdrawal for adjustment	1. Check GS801B2. Operate to initialize BRM(Recovery)
55AHH00	Transaction count exists but GS802A sensor no change during Withdrawal for adjustment	1. Check GS802A2. Operate to initialize BRM(Recovery)
55AHJ00	Transaction count exists but GS802B sensor no change during Withdrawal for adjustment	1. Check GS802B2. Operate to initialize BRM(Recovery)
55AJD00	Error of no available CST during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
55ANA00	CSM stack count is different with BC Normal Pass count during Adjustment withdrawal	1. Operate to initialize BRM(Recovery)
55AR100	Message timeout error during operation ready during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55AR200	Message timeout error during transaction operation during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55AR300	Message timeout error during error postprocessing during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55AR800	RBU/BC sensor auto dimming response message timeout error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ARC00	BC response message timeout error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ARJ00	Message timeout error during Stop Ready during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55AS700	Comparative error when denomination/note count set during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASA00	Set note number to Transit CST in adjustment mode during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
55ASC00	Both RC and CST have Requested count during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASD00	Set Count in DPC or RJC during Adjustment withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASE00	USB Timeout occurs due to excessive RC Separation error Retry during Withdrawal for adjustment	1. Operate to initialize(recover) BRM.2. Reboot the system when the same error occurs after initialization.
55ASF00	OC(Operation Cassette) is set to Transit CST on a device that does not support the front Transit CST during Adjustment withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASG00	OC(Operation Cassette) Set Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASH00	Note number Set Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASM00	RC6 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASN00	Note Full in CSM during adjustment withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASP00	RC7 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASQ00	Set Count in several RC during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASR00	Max withdrawal count excess request error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASS00	RC1 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55AST00	RC2 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASU00	RC3 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASV00	RC4 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASW00	RC5 is not possible for Withdrawal for adjustment during Withdrawal for adjustmet	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
55ASX00	Requested withdrawal count is more than the Residue in the Cassette during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASY00	Requested count is 0 during Withdrawal for adjustment.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ASZ00	No Separation RC during Adjustment withdrawal+Requested count 0 or RC breakdown) during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55BH100	RC1 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH200	RC2 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH300	RC3 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH400	RC4 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH500	RC5 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH600	RC6 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH700	RC1 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH800	RC2 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BH900	RC3 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BHA00	RC4 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BHB00	RC5 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BHC00	RC6 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BHD00	RC1 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
55BHE00	RC2 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
55BHF00	RC3 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
55BHG00	RC4 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
55BHH00	RC5 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
55BHJ00	RC6 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
55BHK00	BMD Open Error During EEPROM Read/Write during Withdrawal for adjustment	1. Check the lower Unit load/removal
55BHU00	BMD EEPROM Read Error during Withdrawal for adjustment	1. Replace RBU B/D
55BHV00	BMD EEPROM Write Error during Withdrawal for adjustment	1. Replace RBU B/D
55BHW00	BMD EEPROM Verify Error during Withdrawal for adjustment	1. Replace RBU B/D
55BHX00	RC7 EEPROM Read Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BHY00	RC7 EEPROM Write Error during Withdrawal for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
55BHZ00	RC7 EEPROM Verify Error during Withdrawal for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
55BR000	RBU Response Timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55BR700	RBU Response Message Timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55BS100	RBU RS-232 Seq Num Echo Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55BS200	RBU RS-232 MI Echo Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55BSS00	RBU Auto Calibration Command Parameter Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55C0100	RC6 GSC01 Light Jam during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
55C0200	RC6 GSC02 Light Jam during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C0500	RC6 GSC05 Light Jam during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the jam on the recycle cassette(8).4. Rotate the knob of the mid transport path.5. Remove the jam on the mid transport path(7).
55C0Z00	RC6 All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C1100	RC6 GSC01 Dark Jam during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C1200	RC6 GSC02 Dark Jam during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C1500	RC6 GSC05 Dark Jam during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C1Z00	RC6 All Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C2100	Error occurred by notes remained in RC6 GSC01 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C2200	Error occurred by notes remained in RC6 GSC02 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C2500	Error occurred by notes remained in RC6 GSC05 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C2Z00	Error occurred by notes remained in RC6 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C3100	Sensor auto calibration error in RC6 GSC01 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
55C3200	Sensor auto calibration error in RC6 GSC02 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C3500	Sensor auto calibration error in RC6 GSC05 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C3Z00	Sensor auto calibration error in RC6 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C4100	Extern lights check error in RC6 GSC01 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C4200	Extern lights check error in RC6 GSC02 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C4500	Extern lights check error in RC6 GSC05 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C4Z00	Extern lights check error in RC6 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C5100	Path error on transport path in RC6 GSC01 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C5200	Path error on transport path in RC6 GSC02 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C5500	Path error on transport path in RC6 GSC05 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C5Z00	Path error on transport path in RC6 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C6100	Path error on sensor except for transport path in RC6 GSC01 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
55C6200	Path error on sensor except for transport path in RC6 GSC02 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C6500	Path error on sensor except for transport path in RC6 GSC05 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C6Z00	Path error on sensor except for transport path in RC6 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55C7100	Error occurred by the notes disorder in RC6 GSC01 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C7200	Error occurred by the notes disorder in RC6 GSC02 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C7500	Error occurred by the notes disorder in RC6 GSC05 during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55C7Z00	Error occurred by the notes disorder in RC6 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55CC100	RC6 Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check the upper and the notes.
55CC200	Exceeded number of retries for RC6 separation error during Withdrawal for adjustment.	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check the upper and the notes.
55CC400	RJC Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
55CG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55CG200	RC6 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.

Problem Code	Problem Description	Troubleshooting
55CG400	RC6 Failure to upword moving of PP during RC6 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
55CG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CG600	RC6 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
55CGA00	RC6 RC Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
55CGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55CGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
55CGF00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
55CGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
55CGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55CGQ00	RJC Press and Stack position fail during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
55CGR00	RJC Stack position fail during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
55CGS00	RC6 RJC Press position fail during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
55CGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
55CGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
55CGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
55CGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Withdrawal for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
55CGX00	RC6 GSC01 detects notes during RJC intialize during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
55CJ100	RC6 RJC Full during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
55CJ200	RC6 RC No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
55CJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
55CK100	RC6 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55CNL00	RC6 Requested notes is more than Residue notes,separation stop during Withdrawal for adjustment	1. Check RC6 actual count and SPL screen count.2. Setting RC6 count match actual count.3. Operate to initialize BRM(Recovery)
55CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CRF00	RC6 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CRP00	RC6 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CS200	RC6 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CS300	RC6 Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CSA00	RC6 Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CSR00	RC6 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55CSZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
55E0100	CST GS901 Light Jam during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E0200	CST GS902 Light Jam during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E0500	CST GS905 Light Jam during Withdrawal for adjustment	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
55E0Z00	CST All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55E1100	CST GS901 Dark Jam during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E1200	CST GS902 Dark Jam during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E1500	CST GS905 Dark Jam during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E1Z00	CST All Dark Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55E2100	Error occurred by notes remained in CST GS901 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E2200	Error occurred by notes remained in CST GS902 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E2500	Error occurred by notes remained in CST GS905 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E2Z00	Error occurred by notes remained in CST All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55E3100	Sensor auto calibration error in CST GS901 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E3200	Sensor auto calibration error in CST GS902 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
55E3500	Sensor auto calibration error in CST GS905 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E3Z00	Sensor auto calibration error in CST All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55E4100	Extern lights check error in CST GS901 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E4200	Extern lights check error in CST GS902 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E4500	Extern lights check error in CST GS905 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E4Z00	Extern lights check error in CST All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55E5100	Path error on transport path in CST GS901 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E5200	Path error on transport path in CST GS902 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E5500	Path error on transport path in CST GS905 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E5Z00	Path error on transport path in CST All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55E6100	Path error on sensor except for transport path in CST GS901 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E6200	Path error on sensor except for transport path in CST GS902 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E6500	Path error on sensor except for transport path in CST GS905 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E6Z00	Path error on sensor except for transport path in CST All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
55E7100	Error occurred by the notes disorder in CST GS901 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E7200	Error occurred by the notes disorder in CST GS902 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E7500	Error occurred by the notes disorder in CST GS905 during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55E7Z00	Error occurred by the notes disorder in CST All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55EC100	CST Miss-Pickup during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
55EC200	Exceeded number of retries for CST separation error during Withdrawal for adjustment.	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
55EC400	CST Last Note No Front detect during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
55EG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55EG200	CST Failure to move PP to stack position during Withdrawal for adjustment	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
55EG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Withdrawal for adjustment	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
55EG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EG600	CST Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Withdrawal for adjustment	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
55EGA00	CST RC Solenoid Echo error during Withdrawal for adjustment	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.

Problem Code	Problem Description	Troubleshooting
55EGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
55EGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
55EGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
55EGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EGK00	CST RC Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
55EJ200	CST No Residue during Withdrawal for adjustment	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
55EJ300	CST Full,Bottom no detect before move RC PP to stack position during Withdrawal for adjustment	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
55EK100	CST separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55ENL00	CST Requested notes is more than Residue notes,separation stop during Withdrawal for adjustment	1. Check CST actual count and SPL screen count.2. Setting CST count match actual count.3. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
55ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ERF00	CST Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ERP00	CST PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ES200	CST Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ES300	CST RC Task not for separation receive separation command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ESA00	CST RC Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ESR00	CST Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55ESZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55F0100	RC7 GSF01 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F0200	RC7 GSF02 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F0500	RC7 GSF05 Light Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
55F0Z00	RC7 All Light Jam during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
55F1100	RC7 GSF01 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F1200	RC7 GSF02 Dark Jam during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F6Z00	RC7 All Path error on sensor except for transport path during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
55F7100	Error occurred by the notes disorder in RC7 GSF01 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F7200	Error occurred by the notes disorder in RC7 GSF02 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F7500	Error occurred by the notes disorder in RC7 GSF05 during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55F7Z00	Error occurred by the notes disorder in RC7 All during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55FC100	RC Miss-Pickup during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
55FC200	Exceeded number of retries for RC7 separation error during Withdrawal for adjustment.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F)..4. Put down the Stage after open the cassette(F) door.5. Remove note in the upper side.6. Check the upper and the notes.
55FG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55FG200	RC7 Failure to move PP to stack position during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(F) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
55FG400	RC7 Failure to upword moving of PP during RC7 stack roller retreat movement during Withdrawal for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(F) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
55FG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FG600	RC7 Stack Roller retreat position disorder during RC Separation during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
55FG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
55FGA00	RC7 Solenoid Echo error during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
55FGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
55FGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
55FGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
55FGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FGK00	RC7 Stack Roller retreat fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
55FGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Withdrawal for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
55FJ200	RC7 No Residue during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
55FJ300	Full,Bottom no detect before move RC7 PP to stack position during Withdrawal for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
55FK100	RC7 separation request notes is 0 during Withdrawal for adjustment	1. Operate to initialize BRM.(Recovery)
55FNL00	RC7 Requested notes is more than Residue notes,separation stop during Withdrawal for adjustment	1. Check RC7 actual count and SPL screen count.2. Setting RC7 count match actual count.3. Operate to initialize BRM(Recovery)
55FRF00	RC7 Feed Motor response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55FRP00	RC7 PP response timeout during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55FS200	RC7 Receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

55FSA00	RC7 Sub Task receive undefined command during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55FSR00	RC7 Sub Task for Wait Setting Error during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
55US100	USB Bulk Sequence Error during Withdrawal for adjustment.	1. Restart over AP-SP
55US300	USB Bulk Received Length Error during Withdrawal for adjustment.	1. Reboot the system
55US400	Message transmission Error from USB to Main Task during Withdrawal for adjustment.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
55US500	Message reception Error from MainTask to USB during Withdrawal for adjustment.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
55USCMD	Bulk command data check error during Withdrawal for adjustment. (USB communication failure)	1. Restart over AP-SP
55USCRC	CRC data check error during Withdrawal for adjustment. (USB communication failure)	1. Restart over AP-SP
55USLEN	Bulk length error during Withdrawal for adjustment. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
561G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
561G200	RC1 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
561G400	RC1 Failure to upward moving of PP during RC1 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
561G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561G600	RC1 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
561GA00	RC1 Solenoid Echo error during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
561GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
561GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
561GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
561GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GK00	RC1 Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
561GQ00	RJC Press and Stack position fail during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
561GR00	RJC Stack position fail during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
561GS00	RC1 RJC Press position fail during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
561GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
561GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
561GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
561GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
561GX00	RC1 GS101 detects notes during RJC intialize during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
561J100	RJC Full during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
561J200	RC1 No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
561J300	Full,Bottom no detect before move RC1 PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
561K100	RC1 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
561NL00	RC1 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC1 actual count and SPL screen count.2. Setting RC1 count match actual count.3. Operate to initialize BRM(Recovery)
561R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561RF00	RC1 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561RP00	RC1 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561S200	RC1 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561S300	RC1 Task not for sepratation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
561SA00	RC1 Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
561SR00	RC1 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
562G200	RC2 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
562G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
562G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562G600	RC2 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
562GA00	RC2 Solenoid Echo error during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
562GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
562GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
562GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
562GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
562GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562GK00	RC2 Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
562J200	RC2 No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
562J300	RC2 Full,Bottom no detect before move RC PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
562K100	RC2 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
562NL00	RC2 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC2 actual count and SPL screen count.2. Setting RC2 count match actual count.3. Operate to initialize BRM(Recovery)
562R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
562R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562RF00	RC2 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562RP00	RC2 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562S200	RC2 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562S300	RC2 Task not for separation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562SA00	RC2 Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
562SR00	RC2 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5630100	RC3 GS301 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5630200	RC3 GS302 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5630500	RC3 GS305 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5631100	RC3 GS301 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5631200	RC3 GS302 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5631500	RC3 GS305 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5632100	Error occurred by notes remained in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5632200	Error occurred by notes remained in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5632500	Error occurred by notes remained in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5633100	Sensor auto calibration error in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5633200	Sensor auto calibration error in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5633500	Sensor auto calibration error in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5634100	Extern lights check error in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5634200	Extern lights check error in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5634500	Extern lights check error in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5635100	Path error on transport path in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5635200	Path error on transport path in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5635500	Path error on transport path in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5636100	Path error on sensor except for transport path in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5636200	Path error on sensor except for transport path in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5636500	Path error on sensor except for transport path in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5637100	Error occurred by the notes disorder in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5637200	Error occurred by the notes disorder in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5637500	Error occurred by the notes disorder in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
563G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
563G200	RC3 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C).4. Open the recycle cassette door (C).5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
563G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
563G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563G600	RC3 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
563GA00	RC3 RC Solenoid Echo error during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
563GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
563GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
563GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
563GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
563GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
563J200	RC3 No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
563J300	RC3 Full,Bottom no detect before move RC PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
563K100	RC3 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
563L100	Remaining notes stack process error in RC3 GS301 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
563L200	Remaining notes stack process error in RC3 GS302 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
563L500	Remaining notes stack process error in RC3 GS305 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
563NL00	RC3 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC3 actual count and SPL screen count.2. Setting RC3 count match actual count.3. Operate to initialize BRM(Recovery)
563R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
563R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563RF00	RC3 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563RP00	RC3 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563S200	RC3 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563S300	RC3 RC Task not for separation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563SA00	RC3 RC Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
563SR00	RC3 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5640100	RC4 GS401 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5640200	RC4 GS402 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5640500	RC4 GS405 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5641100	RC4 GS401 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5641200	RC4 GS402 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5641500	RC4 GS405 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5642100	Error occurred by notes remained in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5642200	Error occurred by notes remained in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5642500	Error occurred by notes remained in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5643100	Sensor auto calibration error in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5643200	Sensor auto calibration error in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5643500	Sensor auto calibration error in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5644100	Extern lights check error in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5644200	Extern lights check error in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5644500	Extern lights check error in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5645100	Path error on transport path in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5645200	Path error on transport path in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5645500	Path error on transport path in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5646100	Path error on sensor except for transport path in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5646200	Path error on sensor except for transport path in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5646500	Path error on sensor except for transport path in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5647100	Error occurred by the notes disorder in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5647200	Error occurred by the notes disorder in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5647500	Error occurred by the notes disorder in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
564G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
564G200	RC4 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
564G400	RC4 Failure to upword moving of PP during RC4 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
564G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564G600	RC4 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
564GA00	RC4 RC Solenoid Echo error during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
564GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
564GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
564GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
564GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
564GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
564J200	RC4 No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D).5. Fill up the Notes if there are no notes
564J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
564K100	RC4 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
564L100	Remaining notes stack process error in RC4 GS401 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
564L200	Remaining notes stack process error in RC4 GS402 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
564L500	Remaining notes stack process error in RC4 GS405 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
564NL00	RC4 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC4 actual count and SPL screen count.2. Setting RC4 count match actual count.3. Operate to initialize BRM(Recovery)
564R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
564R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564RF00	RC4 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564RP00	RC4 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564S200	RC4 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564S300	RC4 RC Task not for separation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564SA00	RC4 RC Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
564SR00	RC4 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5650100	RC5 GS501 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5650200	RC5 GS502 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5650500	RC5 GS505 Light Jam during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5651100	RC5 GS501 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5651200	RC5 GS502 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5651500	RC5 GS505 Dark Jam during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5652100	Error occurred by notes remained in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5652200	Error occurred by notes remained in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5652500	Error occurred by notes remained in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5653100	Sensor auto calibration error in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5653200	Sensor auto calibration error in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5653500	Sensor auto calibration error in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5654100	Extern lights check error in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5654200	Extern lights check error in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5654500	Extern lights check error in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5655100	Path error on transport path in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5655200	Path error on transport path in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5655500	Path error on transport path in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5656100	Path error on sensor except for transport path in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5656200	Path error on sensor except for transport path in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5656500	Path error on sensor except for transport path in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5657100	Error occurred by the notes disorder in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5657200	Error occurred by the notes disorder in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5657500	Error occurred by the notes disorder in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
565G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
565G200	RC5 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
565G400	RC5 Failure to upword moving of PP during RC5 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
565G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565G600	RC5 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
565GA00	RC5 Solenoid Echo error during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
565GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
565GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
565GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
565GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
565GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565GK00	RC5 Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
565J200	RC5 No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E)5. Fill up the Notes if there are no notes
565J300	RC5 Full,Bottom no detect before move RC PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
565K100	RC5 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
565L100	Remaining notes stack process error in RC5 GS501 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
565L200	Remaining notes stack process error in RC5 GS502 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
565L500	Remaining notes stack process error in RC5 GS505 during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
565NL00	RC5 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC5 actual count and SPL screen count.2. Setting RC5 count match actual count.3. Operate to initialize BRM(Recovery)
565R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
565R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565RF00	RC5 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565RP00	RC5 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565S200	RC5 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565S300	RC5 Task not for separation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565SA00	RC5 Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
565SR00	RC5 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5662100	CSM Residue Error during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5662300	CSM insert notes excess Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5662500	CSM notes disappear Error during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5662600	CSM notes appear Error during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5662Z00	CSM Residue Error during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
566B100	CSM Notes insert position Error during Withdrawal Ready	1. Return Notes to customer(Semi OK Code)2. If Notes don't return open the outer/inner Shutter and remove the notes

Problem Code	Problem Description	Troubleshooting
566B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 중) after ready separation during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566B300	CSM Separate Mis-pickup during Withdrawal Ready	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
566B400	CSM Separate disorder Jam (Front Skew) during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566B600	CSM Separate disorder Jam (Over Max Length) during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566B700	CSM Separate disorder Jam (Less Min Length) during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566B800	CSM Separate disorder Dark Jam during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566B900	CSM Low speed control 30 times over Error during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566BA00	CSM Over separation notes during collect lost notes during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566BE00	CSM Residue Notes in separation part after separation during Withdrawal Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
566G100	Fail to move CSM BP to Stack Position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
566G200	Fail to move CSM BP to Deposit Position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
566G300	Fail to move CSM BP to Separation Position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
566G500	Fail to move CSM BP to Note-Out Position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
566G600	Fail to move CSM P-Roller to Home position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
566G800	Fail to CSM return notes during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
566G900	CSM GM601 Step out during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
566GA00	Fail to move CSM BP to return note Position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
566GB00	Fail to move CSM FP to Deposit Position during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
566GF00	Fail to move CSM G-Roller to Homeposition during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
566GG00	Fail to move both CSM P/G-Roller to Homeposition during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
566M200	CSM Inner Shutter Open Error during Withdrawal Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
566M300	CSM Inner Shutter Close Error during Withdrawal Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
566M400	CSM Outer Shutter Open Error during Withdrawal Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
566M500	CSM Outer Shutter Close Error during Withdrawal Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
566M600	CSM Outer Shutter is Opened during Withdrawal Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
566M700	CSM Inner Shutter Open during Stack during Withdrawal Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
566M800	CSM Stopper Home position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
566M900	CSM Stopper Stack position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
566MB00	CSM Bill Supporter Up position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
566MC00	CSM Bill Supporter Down position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
566P100	CSM PP Withdrawal(Stack) position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566P200	CSM PP Deposit position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566P300	CSM PP Separation position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566P400	CSM PP collect lost notes position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566P500	CSM PP Note-out position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566P600	CSM PP Note-arrange position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
566P800	CSM PP Control Stack Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566P900	CSM PP Return note position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566PD00	CSM PP Check semi-note Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566PE00	CSM PP Bill SuCSM PPorter Up position Fail during Withdrawal Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
566R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566RB00	CSM BP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566RF00	CSM Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566RL00	CSM Lift response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566RP00	CSM PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566RR00	CSM Bill supporter response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
566RS00	CSM Inner Shutter response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566RT00	CSM Stopper response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566SA00	CSM Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
566SR00	CSM Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5672100	Error occurred by notes remained in TSK GS701 during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5). Remove notes and substance TSK(5)
5672200	Error occurred by notes remained in TSK GS702 during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5). Remove notes and substance TSK(5)
5672300	Error occurred by notes remained in TSK GS703,4 during Withdrawal Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5672Z00	Error occurred by notes remained in TSK All Sensor during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5). Remove notes and substance TSK(5)
5677100	Error occurred by the notes disorder in TSK GS701 during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5). Remove notes and substance TSK(5)
5677200	Error occurred by the notes disorder in TSK GS702 during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5). Remove notes and substance TSK(5)
5677300	Error occurred by the notes disorder in TSK GS703,4 during Withdrawal Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5677Z00	Error occurred by the notes disorder in TSK All during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5). Remove notes and substance TSK(5)
567C200	TSK Last note unclear during separation during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
567F300	TSK GM701 F-Roller Homeposition fail during Withdrawal Ready	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
567G100	GM701 Return notes fail during Withdrawal Ready	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly

Problem Code	Problem Description	Troubleshooting
567J100	TSK Full during Withdrawal Ready	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
567L100	Remaining notes stack process error in TSK GS701 during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
567L200	Remaining notes stack process error in TSK GS702 during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
567L300	Remaining notes stack process error in TSK GS703,4 during Withdrawal Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
567LZ00	Remaining notes stack process error in TSK All during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
567M100	TSK Stopper Home position for intialze fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
567M200	TSK Stopper Stack position for intialize fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
567M300	TSK Stopper Return note position for intialize fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
567M400	TSK Stopper Lock FP Fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
567M500	TSK Stopper Unlock FP Fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
567P100	FP Sensor detect Dark Fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
567P200	FP Sensor detect Light Fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
567P300	PP Press position fail during Withdrawal Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
567Q700	TSK Door Open during operation in Withdrawal Ready	1. Close the door of TSK(5)
567R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
567R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567RF00	TSK Feed Motor response timeout in Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567RP00	TSK PP response timeout in Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567RT00	TSK Stopper response timeout in Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567S200	TSK Receive undefined command in Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
567SR00	TSK Sub Task for Wait Setting Error in Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568HA01	GS801A Sensor Error during Withdrawal Ready	1. Check GS801A2. Operate to initialize BRM(Recovery)
568HA02	GS801B Sensor Error during Withdrawal Ready	1. Check GS801B2. Operate to initialize BRM(Recovery)
568HA03	GS801A, GS801B Sensor Error during Withdrawal Ready	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
568HA04	GS802A Sensor Error during Withdrawal Ready	1. Check GS802A2. Operate to initialize BRM(Recovery)
568HA05	GS801A, GS802A Sensor Error during Withdrawal Ready	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
568HA06	GS801B, GS802A Sensor Error during Withdrawal Ready	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
568HA07	GS801A, GS801B, GS802A Sensor Error during Withdrawal Ready	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
568HA08	GS802B Sensor Error during Withdrawal Ready	1. Check GS802B2. Operate to initialize BRM(Recovery)
568HA09	GS801A, GS802B Sensor Error during Withdrawal Ready	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
568HA10	GS801B, GS802B Sensor Error during Withdrawal Ready	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
568HA11	GS801A, GS801B, GS802B Sensor Error during Withdrawal Ready	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
568HA12	GS802A, GS802B Sensor Error during Withdrawal Ready	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
568HA13	GS801A, GS802A, GS802B Sensor Error during Withdrawal Ready	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
568HA14	GS801B, GS802A, GS802B Sensor Error during Withdrawal Ready	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
568HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Withdrawal Ready	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
568HB01	MR Sensor Level Error during Withdrawal Ready	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
568HC02	UV_01 Sensor Level Error during Withdrawal Ready	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
568HF03	CIS Shading data loading Fail during Withdrawal Ready	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
568HF04	Detection DB Table loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF05	BC FPGA Data checksum Fail during Withdrawal Ready	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
568HF06	BC FPGA Configuration Fail during Withdrawal Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
568HF07	BC FPGA Header Information Loading Fail during Withdrawal Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
568HF08	BC FPGA Initialize Fail during Withdrawal Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
568HF09	BC FPGA VERSION Fail during Withdrawal Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
568HF11	Detection DB #01 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF12	Detection DB #02 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF13	Detection DB #03 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF14	Detection DB #04 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF15	Detection DB #05 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF16	Detection DB #06 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF17	Detection DB #07 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF18	Detection DB #08 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF19	Detection DB #09 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
568HF20	Detection DB #10 loading Fail during Withdrawal Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
568HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Withdrawal Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Withdrawal Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG03	BC Transaction Ready Fail When Receive BC READY Command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
568HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Withdrawal Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Withdrawal Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Withdrawal Ready	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG07	Receive BC Unknown Command during Withdrawal Ready	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
568HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Withdrawal Ready	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Withdrawal Ready	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Withdrawal Ready	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
568HG11	No Nation Code When Receive BC READY Command during Withdrawal Ready	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Withdrawal Ready	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
568HG20	Fail to Initialize CIS When Receive BC READY Command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
568HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
568HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
568HG23	DD Sensor DAC Set Error When Receive BC READY Command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
568HG24	ENCODER Mode Set Error When Receive BC READY Command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
568HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Withdrawal Ready	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Withdrawal Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Withdrawal Ready	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Withdrawal Ready	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Withdrawal Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Withdrawal Ready	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Withdrawal Ready	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Withdrawal Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Withdrawal Ready	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Withdrawal Ready	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Withdrawal Ready	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Withdrawal Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
568HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Withdrawal Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Withdrawal Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Withdrawal Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Withdrawal Ready	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Withdrawal Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG46	Bill Number Error When Receive Check No Write Command during Withdrawal Ready	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Withdrawal Ready	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG48	Bill Number Table CRC Error When Receive Check No Write Command during Withdrawal Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Withdrawal Ready	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HH01	Fail to Delete NAND FLASH during Withdrawal Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
568HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Withdrawal Ready	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
568HH03	Fail to Download Detection DB during Withdrawal Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
568HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Withdrawal Ready	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
568HH05	Detection DB Download File Check Error during Withdrawal Ready	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
568HH06	Detection DB Download File Size Error during Withdrawal Ready	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
568HH07	DB Table Save Error After Download Detection DB during Withdrawal Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
568HH08	Over Detection DB Download (Over 10) during Withdrawal Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
568HH09	Detection DB Header Information Error during Withdrawal Ready	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
568HH10	EP Download Fail during Withdrawal Ready	1. Re-download BC EP.2. Change the BC B/D if continuous error.
568HH11	EP Download Check Error during Withdrawal Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
568HH12	EP Download File Size Error during Withdrawal Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
568HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Withdrawal Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
568HH14	BC FPGA Download Fail during Withdrawal Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
568HH15	Header Information Save Error After BC FPGA Download during Withdrawal Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
568HH16	Not Provide BC FPGA Download during Withdrawal Ready	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
568HH17	EEPROM READ/WRITE Error during Withdrawal Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
568HH18	Receive Unit Serial Number Undefined Option during Withdrawal Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
568HH19	Receive USB Undefined Command during Withdrawal Ready	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
568HH20	No BC Process Note When Receive Image Upload Command during Withdrawal Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH21	FC1 Set Error When Receive Image Upload Command during Withdrawal Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH22	BC is Processing Note When Receive Image Upload Command during Withdrawal Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH23	FC2 Set Error When Receive Image Upload Command during Withdrawal Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH24	Not Provide Total Image Upload Function during Withdrawal Ready	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
568HH25	Not Provide Note Number Detection Image Upload Function during Withdrawal Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH26	FC2 Set Error When Receive Image Information Upload Command during Withdrawal Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
568HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Withdrawal Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Withdrawal Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Withdrawal Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Ready	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
568HI01	RecogTask Messeage Timeout Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
568HI02	ScanTask Messeage Timeout Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
568HI03	UartTask Messeage Timeout Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
568HI04	BcUsbTask Messeage Timeout Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
568HJ01	Algorithm Initialize Fail during Withdrawal Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HJ02	Algorithm Ready Fail during Withdrawal Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HJ03	Algorithm Information Set Error during Withdrawal Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
568HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Withdrawal Ready	1. Retry the operation

Problem Code	Problem Description	Troubleshooting
568HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Withdrawal Ready	1. Check the number of CST Setting notes info
568HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Withdrawal Ready	1. Check Withdrawal notes setting
568HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Withdrawal Ready	1. Check Withdrawal notes info
568HS01	FPGA Write Data Error When Initialize Scan Driver during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS05	Not Process Shading When Initialize Scan Driver during Withdrawal Ready	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
568HS08	Fail to Set DAC When Initialize Scan Driver during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS11	FPGA Write Data Error When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS13	Fail to Set CIS Led On Value When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS14	Fail to Set Source of Scan Ligh When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS15	Not Process Shading When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS17	Fail to Set AFE Chip When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS18	Fail to Set DAC When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS19	MR/UV/DD Sampling Start Error When BC Ready during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS1A	Fail to Set 2-Notes DAC When BC Ready during Withdrawal Ready	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
568HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Withdrawal Ready	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
568HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS28	Fail to Set DAC When Stop BC during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS29	MR/UV/DD Sampling Stop Error When Stop BC during Withdrawal Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
568HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Withdrawal Ready	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
568HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Withdrawal Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
568HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Withdrawal Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
568HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Withdrawal Ready	1. Retry the operation2. Change BC
568HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Withdrawal Ready	1. Retry the operation2. Change BC
568HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Withdrawal Ready	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
568HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Withdrawal Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
568HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Withdrawal Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
568HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Withdrawal Ready	1. Retry the operation2. Change BC
568HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Withdrawal Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
568HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Withdrawal Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
568HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Withdrawal Ready	1. Retry the operation2. Change BC
568R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
568R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568S100	BCU response MI error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568S200	BCU response BCC error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568S300	BCU response Sub MI error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568S400	BCU response Parameter error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
568S900	BCU response Timeout Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56A2100	Error occurred by notes remained in GS801 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2200	Error occurred by notes remained in GS002 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2300	Error occurred by notes remained in GS003 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2400	Error occurred by notes remained in GS004 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2500	Error occurred by notes remained in GS005 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2600	Error occurred by notes remained in GS006 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
56A2700	Error occurred by notes remained in GS014 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2800	Error occurred by notes remained in GS018 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2900	Error occurred by notes remained in GS020 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2A00	Error occurred by notes remained in GS021 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2C00	Error occurred by notes remained in GS030 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2E00	Error occurred by notes remained in GS001 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2H00	Error occurred by notes remained in GS618 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2J00	Error occurred by notes remained in GS619 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2K00	Error occurred by notes remained in GS701,702 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2M00	Error occurred by notes remained in GSA01 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
56A2N00	Error occurred by notes remained in GSA02 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2P00	Error occurred by notes remained in GSA03 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2Q00	Error occurred by notes remained in GSD01 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56A2W00	Error occurred by notes remained in GS802 during Withdrawal Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
56AA100	UTC open Error before operation Withdrawal Ready	1. Open the upper unit. 2. Check the UTC removal and reinstallation
56AA200	TSK open Error before operation Withdrawal Ready	1. Open the upper unit. 2. Check the TSK open and close
56AA300	BMU Inter Lock Error before operation Withdrawal Ready	1. Check BMU open and close
56AA400	BMU open Error before operation Withdrawal Ready	1. Check BMU open and close
56AA500	Replenishment CST open Error before operation Withdrawal Ready	1. Check the Transit CST installation
56AA600	CSM open Error before operation Withdrawal Ready	1. Open the upper unit. 2. Check CSM Open/Close
56AA800	BMD Inter Lock Error before operation Withdrawal Ready	1. Open the lower unit. 2. Check the BMD open and close
56AA900	BMD open Error before operation Withdrawal Ready	1. Open the lower unit. 2. Check the BMD open and close
56AAA00	BC Open Error before operation Withdrawal Ready	1. Open the upper unit. 2. Check BC Open/Close
56AAB00	RC Full Error before operation Withdrawal Ready	1. Open the lower unit. 2. Check RC Full and remove notes
56AAC00	RJC Full Error before operation Withdrawal Ready	1. Open the upper unit. 2. Check RJC Full and remove notes
56AAD00	UTC Full Error before operation Withdrawal Ready	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
56AAE00	RTC Full Error before operation Withdrawal Ready	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
56AAF00	RC Empty Error before operation Withdrawal Ready	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC

Problem Code	Problem Description	Troubleshooting
56AAG00	Suspected note RC open Error before operation Withdrawal Ready	1. Open the lower unit. 2. Check the RC removal and reinstall
56AE100	Received operation command without Initial Info Set during Withdrawal Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
56AE200	Status on not operation reception command during Withdrawal Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
56AE300	Received operation command without System Info Read during Withdrawal Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
56AE400	Transaction was executed without Initializing after power on during Withdrawal Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
56AEE00	RBU RS485 communication sequence disorder during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
56AEF00	RBU RS485 connection line disorder during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
56AEL00	RBU communication was not ready after power on during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
56AH600	Failure to check clearing NVRAM during Withdrawal Ready	1. Operate to initialize BRM(Recovery)
56AR100	Message timeout error during operation ready during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56AR200	Message timeout error during transation operation during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56AR300	Message timeout error during error postprocessing during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56AR800	RBU/BC sensor auto dimming response message timeout error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ARC00	BC response message timeout error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ARJ00	Message timeout error during Stop Ready during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56BR000	RBU Response Timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56BR700	RBU Response Message Timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
56BS100	RBU RS-232 Seq Num Echo Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56BS200	RBU RS-232 MI Echo Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56BSS00	RBU Auto Calibration Command Parameter Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
56CG200	RC6 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
56CG400	RC6 Failure to upward moving of PP during RC6 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
56CG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CG600	RC6 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
56CGA00	RC6 RC Solenoid Echo error during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
56CGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
56CGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
56CGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
56CFG00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
56CGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56CGQ00	RJC Press and Stack position fail during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
56CGR00	RJC Stack position fail during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
56CGS00	RC6 RJC Press position fail during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
56CGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
56CGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
56CGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
56CGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Withdrawal Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
56CGX00	RC6 GSC01 detects notes during RJC intialize during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
56CJ100	RC6 RJC Full during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
56CJ200	RC6 RC No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
56CJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
56CK100	RC6 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
56CNL00	RC6 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC6 actual count and SPL screen count.2. Setting RC6 count match actual count.3. Operate to initialize BRM(Recovery)
56CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
56CRF00	RC6 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CRP00	RC6 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CS200	RC6 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CS300	RC6 Task not for separation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CSA00	RC6 Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56CSR00	RC6 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56EG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
56EG200	CST Failure to move PP to stack position during Withdrawal Ready	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
56EG400	CST Failure to upward moving of PP during RC stack roller retreat movement during Withdrawal Ready	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
56EG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EG600	CST Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Withdrawal Ready	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
56EGA00	CST RC Solenoid Echo error during Withdrawal Ready	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
56EGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
56EGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
56EGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
56EGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
56EGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EGK00	CST RC Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
56EJ200	CST No Residue during Withdrawal Ready	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
56EJ300	CST Full,Bottom no detect before move RC PP to stack position during Withdrawal Ready	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
56EK100	CST separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
56ENL00	CST Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check CST actual count and SPL screen count.2. Setting CST count match actual count.3. Operate to initialize BRM(Recovery)
56ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
56ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ERF00	CST Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ERP00	CST PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ES200	CST Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ES300	CST RC Task not for separation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ESA00	CST RC Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56ESR00	CST Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56FG100	RC7 Failure of returning notes (GSF01, GSF02 Sensors detect no notes) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
56FG200	RC7 Failure to move PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
56FG400	RC7 Failure to upward moving of PP during RC7 stack roller retreat movement during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
56FG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FG600	RC7 Stack Roller retreat position disorder during RC Separation during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
56FG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
56FGA00	RC7 Solenoid Echo error during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
56FGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
56FGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
56FGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
56FGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FGK00	RC7 Stack Roller retreat fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
56FGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Withdrawal Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
56FJ200	RC7 No Residue during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
56FJ300	Full,Bottom no detect before move RC7 PP to stack position during Withdrawal Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
56FK100	RC7 separation request notes is 0 during Withdrawal Ready	1. Operate to initialize BRM.(Recovery)
56FNL00	RC7 Requested notes is more than Residue notes,separation stop during Withdrawal Ready	1. Check RC7 actual count and SPL screen count.2. Setting RC7 count match actual count.3. Operate to initialize BRM(Recovery)
56FRF00	RC7 Feed Motor response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56FRP00	RC7 PP response timeout during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56FS200	RC7 Receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56FS300	RC7 Task not for sepratation receive separation command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56FSA00	RC7 Sub Task receive undefined command during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56FSR00	RC7 Sub Task for Wait Setting Error during Withdrawal Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
56US100	USB Bulk Sequence Error during Withdrawal Ready.	1. Restart over AP-SP
56US300	USB Bulk Received Length Error during Withdrawal Ready.	1. Reboot the system
56US400	Message transmission Error from USB to Main Task during Withdrawal Ready.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
56US500	Message reception Error from MainTask to USB during Withdrawal Ready.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
56USCMD	Bulk command data check error during Withdrawal Ready. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
56USCRC	CRC data check error during Withdrawal Ready. (USB communication failure)	1. Restart over AP-SP
56USLEN	Bulk length error during Withdrawal Ready. (USB communication failure)	1. Restart over AP-SP
5700100	GS801 Light Jam error during Withdrawal	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5700200	GS002 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700300	GS003 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700400	GS004 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700500	GS005 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700600	GS006 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700700	GS014 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700800	GS018 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700900	GS020 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5700A00	GS021 Light Jam error during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5700C00	GS030 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700E00	GS001 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700H00	GS618 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700J00	GS619 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5700M00	GSA01 Light Jam error during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5700N00	GSA02 Light Jam error during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5700P00	GSA03 Light Jam error during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5700Q00	GSD01 Light Jam error during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5700W00	GS802 Light Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5701100	GS801 Dark Jam error during Withdrawal	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5701200	GS002 Dark Jam error during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702100	Error occurred by notes remained in GS801 during Withdrawal	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5702200	Error occurred by notes remained in GS002 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702300	Error occurred by notes remained in GS003 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702400	Error occurred by notes remained in GS004 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702500	Error occurred by notes remained in GS005 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702600	Error occurred by notes remained in GS006 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702700	Error occurred by notes remained in GS014 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702800	Error occurred by notes remained in GS018 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702900	Error occurred by notes remained in GS020 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702A00	Error occurred by notes remained in GS021 during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5702C00	Error occurred by notes remained in GS030 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5702E00	Error occurred by notes remained in GS001 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702H00	Error occurred by notes remained in GS618 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702J00	Error occurred by notes remained in GS619 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5702M00	Error occurred by notes remained in GSA01 during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5702N00	Error occurred by notes remained in GSA02 during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5702P00	Error occurred by notes remained in GSA03 during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5702Q00	Error occurred by notes remained in GSD01 during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5702W00	Error occurred by notes remained in GS802 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705100	GS801 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5705200	GS002 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5705300	GS003 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705400	GS004 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705500	GS005 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705600	GS006 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705700	GS014 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705800	GS018 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705900	GS020 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705A00	GS021 Path error on transport path during Withdrawal	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5705C00	GS030 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5705E00	GS001 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5705H00	GS618 Path error on transport path during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. 570D300	Reject excess error (Unappointed notes error) during Withdrawal	1. Check the Rejected denomination during withdrawal(Including denomination which did not set up in the cassette)
570D400	Reject excess error (Cassette note error) during Withdrawal	1. Check the Rejected denomination during withdrawal(Including denomination which did not set up in the cassette)
570D500	Reject excess error (2notes) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570D600	Reject excess error (Gap error(1note)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570D700	Reject excess error (Gap error(2notes)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution

Problem Code	Problem Description	Troubleshooting
570D800	Reject excess error (skew error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570D900	Reject excess error (shift error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DA00	Reject excess error (Max length error(1note)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DB00	Reject excess error (Max length error(2notes)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DC00	Reject excess error (Max length error(3notes)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DD00	Reject excess error (Max length error(4notes)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DE00	Reject excess error (Min length error(1note)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DF00	Reject excess error (Min length error(2notes)) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
570DG00	Reject excess error (note error) during Withdrawal	1. Check the Rejected denomination during withdrawal(Including denomination which did not set up in the cassette)
570DH00	Reject excess error (MR error) during Withdrawal	1. Check the Rejected Notes during withdrawal(Failure to Notes recognition)
570DJ00	Reject excess error (IR error) during Withdrawal	1. Check the Rejected Notes during withdrawal(Failure to Notes recognition)
570DK00	Reject excess error (Edge error) during Withdrawal	1. Check the Rejected Notes during withdrawal(Failure to Notes recognition)
570DL00	Reject excess error (Image error) during Withdrawal	1. Check the Rejected Notes during withdrawal(Failure to Notes recognition)
570DM00	Reject excess error (UV error) during Withdrawal	1. Check the Rejected Notes during withdrawal(Failure to Notes recognition)
570DN00	Reject excess error (Sensor error) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DO00	Deposit count disallowed notes reject excess error during Withdrawal	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
570DP00	Reject excess error (Communication error) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DQ00	Reject excess error (Full & etc) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DR00	Recognition Fail Error (Recognition test fail) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DS00	Recognition Fail Error (No Recognition info) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DT00	Recognition Fail Error (Only STX in Recognition info) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DU00	Recognition Fail Error (Recognition info BCC NG) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DV00	Recognition Fail Error (Recognition info MI NG) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DW00	Recognition Fail Error (Recognition info Index Fail) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DX00	Recognition Fail Error (Info BC Pass Info) during Withdrawal	1. Operate to initialize BRM(Recovery)
570DY00	Recognition Fail Error (Serial Number Data Format error) during Withdrawal	1. Operate to initialize BRM(Recovery)
570F100	GM001 motor doesn't operate at a constant speed when the motor works during Withdrawal	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
570F200	GM002 motor doesn't operate at a constant speed when the motor works during Withdrawal	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570F400	GM004 motor doesn't operate at a constant speed when the motor works during Withdrawal	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570F600	GM006 motor doesn't operate at a constant speed when the motor works during Withdrawal	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570F700	GM007 motor doesn't operate at a constant speed when the motor works during Withdrawal	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570F900	GM009 motor doesn't operate at a constant speed when the motor works during Withdrawal	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
570FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize

Problem Code	Problem Description	Troubleshooting
570FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
570FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
570FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
570FY00	Fail to Start BM Low Speed Control during Withdrawal (Motor Encoder Error)	1. Open the lower, upper unit2. Check remained Notes and substance in the upper, lower Transport Path3. Check motor encoder sensors4. Initialize
570G100	Failure to 3Way Gate 0 degree mode conversion during Withdrawal	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
570G200	Failure to 3Way Gate 120 degree mode conversion during Withdrawal	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
570GB00	Time Out to 3Way Gate Mode conversion during Withdrawal	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
570GC00	Failure to GGA01 RTRJ Gate RJC Mode conversion during Withdrawal	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
570GD00	Failure to GGA01 RTRJ Gate RTC Mode conversion during Withdrawal	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
570K100	Duplication S/N Error during Withdrawal	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
570N400	Jam Message Receive Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
570NA00	Checksum error when notes separate from TSK during Withdrawal	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
570NC00	length different from separation part to stack part after transport during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
570NK00	BC recognized notes have no cassette to be stacked during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
570Q100	UTC detachment Error during Withdrawal	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
570Q200	TSK detachment Error during Withdrawal	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
570Q300	BMU Inter Lock Error during Withdrawal	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
570Q400	BMU detackment Error during Withdrawal	1. Check Load/Removal of the upper unit
570Q500	Replenishment CST detachment Error during Withdrawal	1. Check the safe door open
570Q600	CSM detackment Error during Withdrawal	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
570Q800	BMD Inter Lock Error during Withdrawal	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
570Q900	BMD detachment Error during Withdrawal	1. Check the lower Unit load/removal
570QA00	BC Open Error during Withdrawal	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
570QS00	Receive Error Stop CMD during Withdrawal	1. Initialize
570R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
570R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
570R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
570SZ00	Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5710100	RC1 GS101 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5710200	RC1 GS102 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5710500	RC1 GS105 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5710Z00	RC1 All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5711100	RC1 GS101 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5711200	RC1 GS102 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5711500	RC1 GS105 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5711Z00	All RC1 Sensor Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5712100	Error occurred by notes remained in RC1 GS101 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5712200	Error occurred by notes remained in RC1 GS102 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5712500	Error occurred by notes remained in RC1 GS105 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5712Z00	Error occurred by notes remained in All RC1 Sensor during Withdrawal	1. Operate to initialize BRM.(Recovery)
5713100	RC1 GS101 Sensor auto calibration error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5713200	RC1 GS102 Sensor auto calibration error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5713500	RC1 GS105 Sensor auto calibration error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5713Z00	All RC1 Sensor auto calibration error during Withdrawal	1. Operate to initialize BRM.(Recovery)
5714100	RC1 GS101 Extern lights check error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5714200	RC1 GS102 Extern lights check error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5714500	RC1 GS105 Extern lights check error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5714Z00	All RC1 Sensor Extern lights check error during Withdrawal	1. Operate to initialize BRM.(Recovery)
5715100	RC1 GS101 Path error on transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5715200	RC1 GS102 Path error on transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5715500	RC1 GS105 Path error on transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5715Z00	All RC1 Sensor Path error on transport path during Withdrawal	1. Operate to initialize BRM.(Recovery)
5716100	RC1 GS101 Path error on sensor except for transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5716200	RC1 GS102 Path error on sensor except for transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5716500	RC1 GS105 Path error on sensor except for transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5716Z00	RC1 All Path error on sensor except for transport path during Withdrawal	1. Operate to initialize BRM.(Recovery)
5717100	Error occurred by the notes disorder in RC1 GS101 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5717200	Error occurred by the notes disorder in RC1 GS102 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5717500	Error occurred by the notes disorder in RC1 GS105 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5717Z00	Error occurred by the notes disorder in RC1 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
571C100	RC Miss-Pickup during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
571C200	Exceeded number of retries for RC1 separation error during Withdrawal.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
571C400	RC1 Last Note No Front detect during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
571G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
571G200	RC1 Failure to move PP to stack position during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
571G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
571G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571G600	RC1 Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
571GA00	RC1 Solenoid Echo error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
571GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
571GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
571GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
571GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
571GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571GK00	RC1 Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
571GQ00	RJC Press and Stack position fail during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
571GR00	RJC Stack position fail during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
571GS00	RC1 RJC Press position fail during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
571GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
571GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
571GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
571GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
571GX00	RC1 GS101 detects notes during RJC intialize during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
571J100	RJC Full during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
571J200	RC1 No Residue during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
571J300	Full,Bottom no detect before move RC1 PP to stack position during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
571K100	RC1 separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)
571NL00	RC1 Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check RC1 actual count and SPL screen count.2. Setting RC1 count match actual count.3. Operate to initialize BRM(Recovery)
571R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571RF00	RC1 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571RP00	RC1 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571S200	RC1 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571S300	RC1 Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571SA00	RC1 Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571SR00	RC1 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
571SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5720100	RC2 GS201 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5720200	RC2 GS202 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5720500	RC2 GS205 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5720Z00	RC2 All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5721100	RC2 GS201 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5721200	RC2 GS202 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5721500	RC2 GS205 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5721Z00	RC2 All Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5722100	Error occurred by notes remained in RC2 GS201 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5722200	Error occurred by notes remained in RC2 GS202 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5722500	Error occurred by notes remained in RC2 GS205 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5722Z00	Error occurred by notes remained in RC2 All Sensor during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5723100	Sensor auto calibration error in RC2 GS201 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5723200	Sensor auto calibration error in RC2 GS202 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5723500	Sensor auto calibration error in RC2 GS205 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5723Z00	Sensor auto calibration error in RC2 All Sensor during Withdrawal	1. Operate to initialize BRM.(Recovery)
5724100	Extern lights check error in RC2 GS201 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5724200	Extern lights check error in RC2 GS202 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5724500	Extern lights check error in RC2 GS205 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5724Z00	Extern lights check error in RC2 All Sensor during Withdrawal	1. Operate to initialize BRM.(Recovery)
5725100	Path error on transport path in RC2 GS201 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5725200	Path error on transport path in RC2 GS202 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5725500	Path error on transport path in RC2 GS205 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5725Z00	Path error on transport path in RC2 All Sensor during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5726100	Path error on sensor except for transport path in RC2 GS201 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5726200	Path error on sensor except for transport path in RC2 GS202 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5726500	Path error on sensor except for transport path in RC2 GS205 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5726Z00	Path error on sensor except for transport path in RC2 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5727100	Error occurred by the notes disorder in RC2 GS201 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5727200	Error occurred by the notes disorder in RC2 GS202 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5727500	Error occurred by the notes disorder in RC2 GS205 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5727Z00	Error occurred by the notes disorder in RC2 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
572C100	RC2 Miss-Pickup during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check the upper and the notes.
572C200	Exceeded number of retries for RC2 separation error during Withdrawal.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check the upper and the notes.
572C400	RC2 Last Note No Front detect during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
572G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
572G200	RC2 Failure to move PP to stack position during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
572G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
572G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572G600	RC2 Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
572GA00	RC2 Solenoid Echo error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
572GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
572GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
572GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
572GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572GK00	RC2 Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
572J200	RC2 No Residue during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B)5. Fill up the Notes if there are no notes
572J300	RC2 Full,Bottom no detect before move RC PP to stack position during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
572K100	RC2 separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)
572NL00	RC2 Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check RC2 actual count and SPL screen count.2. Setting RC2 count match actual count.3. Operate to initialize BRM(Recovery)
572R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
572RF00	RC2 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572RP00	RC2 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572S200	RC2 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572S300	RC2 Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572SA00	RC2 Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572SR00	RC2 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
572SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5730100	RC3 GS301 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5730200	RC3 GS302 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5730500	RC3 GS305 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5730Z00	RC3 All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5731100	RC3 GS301 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5731200	RC3 GS302 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5731500	RC3 GS305 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5731Z00	RC3 All Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5732100	Error occurred by notes remained in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5732200	Error occurred by notes remained in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5732500	Error occurred by notes remained in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5732Z00	Error occurred by notes remained in RC3 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5733100	Sensor auto calibration error in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5733200	Sensor auto calibration error in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5733500	Sensor auto calibration error in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5733Z00	Sensor auto calibration error in RC3 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5734100	Extern lights check error in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5734200	Extern lights check error in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5734500	Extern lights check error in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5734Z00	Extern lights check error in RC3 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5735100	Path error on transport path in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5735200	Path error on transport path in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5735500	Path error on transport path in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5735Z00	Path error on transport path in RC3 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5736100	Path error on sensor except for transport path in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5736200	Path error on sensor except for transport path in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5736500	Path error on sensor except for transport path in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5736Z00	Path error on sensor except for transport path in RC3 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5737100	Error occurred by the notes disorder in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5737200	Error occurred by the notes disorder in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5737500	Error occurred by the notes disorder in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5737Z00	Error occurred by the notes disorder in RC3 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
573C100	RC3 Miss-Pickup during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check the upper and the notes.
573C200	Exceeded number of retries for RC3 separation error during Withdrawal.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check the upper and the notes.
573C400	RC3 Last Note No Front detect during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
573G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
573G200	RC3 Failure to move PP to stack position during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
573G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
573G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573G600	RC3 Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
573GA00	RC3 RC Solenoid Echo error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
573GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
573GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
573GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
573GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
573GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
573J200	RC3 No Residue during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
573J300	RC3 Full,Bottom no detect before move RC PP to stack position during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
573K100	RC3 separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
573L100	Remaining notes stack process error in RC3 GS301 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
573L200	Remaining notes stack process error in RC3 GS302 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
573L500	Remaining notes stack process error in RC3 GS305 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
573NL00	RC3 Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check RC3 actual count and SPL screen count.2. Setting RC3 count match actual count.3. Operate to initialize BRM(Recovery)
573R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573RF00	RC3 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573RP00	RC3 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573S200	RC3 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573S300	RC3 RC Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573SA00	RC3 RC Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
573SR00	RC3 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
573SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5740100	RC4 GS401 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5740200	RC4 GS402 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5740500	RC4 GS405 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5740Z00	RC4 All Sensor Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5741100	RC4 GS401 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5741200	RC4 GS402 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5741500	RC4 GS405 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5741Z00	RC4 All Sensor Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5742100	Error occurred by notes remained in RC4 GS401 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5742200	Error occurred by notes remained in RC4 GS402 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5742500	Error occurred by notes remained in RC4 GS405 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5742Z00	Error occurred by notes remained in RC4 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5743100	Sensor auto calibration error in RC4 GS401 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

574R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574RF00	RC4 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574RP00	RC4 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574S200	RC4 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574S300	RC4 RC Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574SA00	RC4 RC Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574SR00	RC4 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
574SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5750100	RC5 GS501 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5750200	RC5 GS502 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5750500	RC5 GS505 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5750Z00	RC5 All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5751100	RC5 GS501 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5751200	RC5 GS502 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5751500	RC5 GS505 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5751Z00	RC5 All Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
5752100	Error occurred by notes remained in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5752200	Error occurred by notes remained in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5752500	Error occurred by notes remained in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5752Z00	Error occurred by notes remained in RC5 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5753100	Sensor auto calibration error in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5753200	Sensor auto calibration error in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5753500	Sensor auto calibration error in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5753Z00	Sensor auto calibration error in RC5 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5754100	Extern lights check error in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5754200	Extern lights check error in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5754500	Extern lights check error in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5754Z00	Extern lights check error in RC5 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5755100	Path error on transport path in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5755200	Path error on transport path in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5755500	Path error on transport path in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5755Z00	Path error on transport path in RC5 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
5756100	Path error on sensor except for transport path in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5756200	Path error on sensor except for transport path in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5756500	Path error on sensor except for transport path in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5756Z00	Path error on sensor except for transport path in RC5 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5757100	Error occurred by the notes disorder in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5757200	Error occurred by the notes disorder in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5757500	Error occurred by the notes disorder in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5757Z00	Error occurred by the notes disorder in RC5 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
575C100	RC5 Miss-Pickup during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check the upper and the notes.
575C200	Exceeded number of retries for RC5 separation error during Withdrawal.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check the upper and the notes.
575C400	RC5 Last Note No Front detect during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
575G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
575G200	RC5 Failure to move PP to stack position during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
575G400	RC5 Failure to upword moving of PP during RC5 stack roller retreat movement during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
575G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575G600	RC5 Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
575G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
575GA00	RC5 Solenoid Echo error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
575GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
575GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
575GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
575GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575GK00	RC5 Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
575GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
575J200	RC5 No Residue during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E)5. Fill up the Notes if there are no notes
575J300	RC5 Full,Bottom no detect before move RC PP to stack position during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
575K100	RC5 separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)
575L100	Remaining notes stack process error in RC5 GS501 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
575L200	Remaining notes stack process error in RC5 GS502 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
575L500	Remaining notes stack process error in RC5 GS505 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
575NL00	RC5 Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check RC5 actual count and SPL screen count.2. Setting RC5 count match actual count.3. Operate to initialize BRM(Recovery)
575R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575RF00	RC5 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575RP00	RC5 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
575S200	RC5 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575S300	RC5 Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575SA00	RC5 Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575SR00	RC5 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
575SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5761H00	GS618/619 Dark Jam error during Withdrawal.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5762100	CSM Residue Error during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5762200	CSM No separation notes Error during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5762300	CSM insert notes excess Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5762500	CSM notes disappear Error during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5762600	CSM notes appear Error during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5762Z00	CSM Residue Error during withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
576B100	CSM Notes insert position Error during Withdrawal	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
576B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 등) after ready separation during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
576B300	CSM Separate Mis-pickup during Withdrawal	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
576B400	CSM Separate disorder Jam (Front Skew) during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576B600	CSM Separate disorder Jam (Over Max Length) during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576B700	CSM Separate disorder Jam (Less Min Length) during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576B800	CSM Separate disorder Dark Jam during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576B900	CSM Low speed control 30 times over Error during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576BA00	CSM Over separation notes during collect lost notes during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576BE00	CSM Residue Notes in separation part after separation during Withdrawal	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
576G100	Fail to move CSM BP to Stack Position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
576G200	Fail to move CSM BP to Deposit Position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
576G300	Fail to move CSM BP to Separation Position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
576G500	Fail to move CSM BP to Note-Out Position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
576G600	Fail to move CSM P-Roller to Home position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status

Problem Code	Problem Description	Troubleshooting
576G800	Fail to CSM return notes during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
576G900	CSM GM601 Step out during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
576GA00	Fail to move CSM BP to return note Position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
576GB00	Fail to move CSM FP to Deposit Position during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
576GF00	Fail to move CSM G-Roller to Homeposition during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
576GG00	Fail to move both CSM P/G-Roller to Homeposition during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
576M200	CSM Inner Shutter Open Error during Withdrawal	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
576M300	CSM Inner Shutter Close Error during Withdrawal	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
576M400	CSM Outer Shutter Open Error during Withdrawal	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
576M500	CSM Outer Shutter Close Error during Withdrawal	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
576M600	CSM Outer Shutter is Opened during Withdrawal	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
576M700	CSM Inner Shutter Open during Stack during Withdrawal	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
576M800	CSM Stopper Home position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
576M900	CSM Stopper Stack position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
576MB00	CSM Bill Supporter Up position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
576MC00	CSM Bill Supporter Down position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
576P100	CSM PP Withdrawal(Stack) position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576P200	CSM PP Deposit position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576P300	CSM PP Separation position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576P400	CSM PP collect lost notes position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576P500	CSM PP Note-out position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576P600	CSM PP Note-arrange position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
576P800	CSM PP Control Stack Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576P900	CSM PP Return note position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576PD00	CSM PP Check semi-note Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576PE00	CSM PP Bill SuCSM PPorter Up position Fail during Withdrawal	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
576R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576RB00	CSM BP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576RF00	CSM Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576RL00	CSM Lift response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576RP00	CSM PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576RR00	CSM Bill supporter response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
576RS00	CSM Inner Shutter response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576RT00	CSM Stopper response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576SA00	CSM Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
576SR00	CSM Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5770100	TSK GS701 Light Jam during Withdrawal	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5770200	TSK GS702 Light Jam during Withdrawal	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5770300	TSK GS703,4 Light Jam during Withdrawal	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5770Z00	TSK All Light Jam during Withdrawal	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5771100	TSK GS701 Dark Jam during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5771200	TSK GS702 Dark Jam during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5771300	TSK GS703,4 Dark Jam during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5771Z00	TSK All Dark Jam during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5772100	Error occurred by notes remained in TSK GS701 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5772200	Error occurred by notes remained in TSK GS702 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5772300	Error occurred by notes remained in TSK GS703,4 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5772Z00	Error occurred by notes remained in TSK All Sensor during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5775100	GS701 Path error on transport path during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5775200	GS702 Path error on transport path during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5777100	Error occurred by the notes disorder in GS701 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5777200	Error occurred by the notes disorder in GS702 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5777300	Error occurred by the notes disorder in TSK GS703,4 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5777Z00	Error occurred by the notes disorder in TSK All during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
577C200	TSK Last note unclear during separation during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
577CA00	TSK Incounted note is not Outcounted for 500ms during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
577F200	TSK GM701 stepout during stack during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
577F300	TSK GM701 F-Roller Homeposition fail during Withdrawal	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
577G100	GM701 Return notes fail during Withdrawal	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
577J100	TSK Full during Withdrawal	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK

Problem Code	Problem Description	Troubleshooting
577L100	Remaining notes stack process error in TSK GS701 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
577L200	Remaining notes stack process error in TSK GS702 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
577L300	Remaining notes stack process error in TSK GS703,4 during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
577LZ00	Remaining notes stack process error in TSK All during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
577M100	TSK Stopper Home position for intialize fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
577M200	TSK Stopper Stack position for intialize fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
577M300	TSK Stopper Return note position for intialize fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
577M400	TSK Stopper Lock FP Fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
577M500	TSK Stopper Unlock FP Fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
577P100	FP Sensor detect Dark Fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
577P200	FP Sensor detect Light Fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
577P300	PP Press position fail during Withdrawal	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
577Q700	TSK Door Open during operation in Withdrawal	1. Close the door of TSK(5)
577R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
577R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577RF00	TSK Feed Motor response timeout in Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577RP00	TSK PP response timeout in Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577RT00	TSK Stopper response timeout in Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577S200	TSK Receive undefined command in Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
577SR00	TSK Sub Task for Wait Setting Error in Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578HA01	GS801A Sensor Error during Withdrawal	1. Check GS801A2. Operate to initialize BRM(Recovery)
578HA02	GS801B Sensor Error during Withdrawal	1. Check GS801B2. Operate to initialize BRM(Recovery)
578HA03	GS801A, GS801B Sensor Error during Withdrawal	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
578HA04	GS802A Sensor Error during Withdrawal	1. Check GS802A2. Operate to initialize BRM(Recovery)
578HA05	GS801A, GS802A Sensor Error during Withdrawal	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
578HA06	GS801B, GS802A Sensor Error during Withdrawal	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
578HA07	GS801A, GS801B, GS802A Sensor Error during Withdrawal	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
578HA08	GS802B Sensor Error during Withdrawal	1. Check GS802B2. Operate to initialize BRM(Recovery)
578HA09	GS801A, GS802B Sensor Error during Withdrawal	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
578HA10	GS801B, GS802B Sensor Error during Withdrawal	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
578HA11	GS801A, GS801B, GS802B Sensor Error during Withdrawal	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
578HA12	GS802A, GS802B Sensor Error during Withdrawal	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
578HA13	GS801A, GS802A, GS802B Sensor Error during Withdrawal	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
578HA14	GS801B, GS802A, GS802B Sensor Error during Withdrawal	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
578HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Withdrawal	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
578HB01	MR Sensor Level Error during Withdrawal	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
578HC02	UV_01 Sensor Level Error during Withdrawal	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
578HF03	CIS Shading data loading Fail during Withdrawal	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
578HF04	Detection DB Table loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF05	BC FPGA Data checksum Fail during Withdrawal	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
578HF06	BC FPGA Configuration Fail during Withdrawal	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
578HF07	BC FPGA Header Information Loading Fail during Withdrawal	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
578HF08	BC FPGA Initialize Fail during Withdrawal	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
578HF09	BC FPGA VERSION Fail during Withdrawal	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
578HF11	Detection DB #01 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF12	Detection DB #02 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF13	Detection DB #03 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF14	Detection DB #04 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF15	Detection DB #05 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF16	Detection DB #06 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF17	Detection DB #07 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF18	Detection DB #08 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF19	Detection DB #09 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HF20	Detection DB #10 loading Fail during Withdrawal	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
578HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Withdrawal	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
578HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Withdrawal	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG03	BC Transaction Ready Fail When Receive BC READY Command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
578HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Withdrawal	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Withdrawal	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Withdrawal	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG07	Receive BC Unknown Command during Withdrawal	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
578HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Withdrawal	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Withdrawal	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Withdrawal	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
578HG11	No Nation Code When Receive BC READY Command during Withdrawal	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Withdrawal	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
578HG20	Fail to Initialize CIS When Receive BC READY Command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
578HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
578HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
578HG23	DD Sensor DAC Set Error When Receive BC READY Command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
578HG24	ENCODER Mode Set Error When Receive BC READY Command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
578HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Withdrawal	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Withdrawal	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Withdrawal	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Withdrawal	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Withdrawal	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Withdrawal	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Withdrawal	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Withdrawal	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Withdrawal	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HG4A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Withdrawal	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG4B	Over The Number of BC MODE SET Back Codes (Over 15) during Withdrawal	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Withdrawal	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
578HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Withdrawal	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Withdrawal	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Withdrawal	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Withdrawal	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Withdrawal	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG46	Bill Number Error When Receive Check No Write Command during Withdrawal	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Withdrawal	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG48	Bill Number Table CRC Error When Receive Check No Write Command during Withdrawal	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Withdrawal	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HH01	Fail to Delete NAND FLASH during Withdrawal	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
578HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Withdrawal	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
578HH03	Fail to Download Detection DB during Withdrawal	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
578HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Withdrawal	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
578HH05	Detection DB Download File Check Error during Withdrawal	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
578HH06	Detection DB Download File Size Error during Withdrawal	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
578HH07	DB Table Save Error After Download Detection DB during Withdrawal	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
578HH08	Over Detection DB Download (Over 10) during Withdrawal	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
578HH09	Detection DB Header Information Error during Withdrawal	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
578HH10	EP Download Fail during Withdrawal	1. Re-download BC EP.2. Change the BC B/D if continuous error.
578HH11	EP Download Check Error during Withdrawal	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
578HH12	EP Download File Size Error during Withdrawal	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
578HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Withdrawal	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
578HH14	BC FPGA Download Fail during Withdrawal	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
578HH15	Header Information Save Error After BC FPGA Download during Withdrawal	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
578HH16	Not Provide BC FPGA Download during Withdrawal	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
578HH17	EEPROM READ/WRITE Error during Withdrawal	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
578HH18	Receive Unit Serial Number Undefined Option during Withdrawal	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
578HH19	Receive USB Undefined Command during Withdrawal	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
578HH20	No BC Process Note When Receive Image Upload Command during Withdrawal	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH21	FC1 Set Error When Receive Image Upload Command during Withdrawal	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH22	BC is Processing Note When Receive Image Upload Command during Withdrawal	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH23	FC2 Set Error When Receive Image Upload Command during Withdrawal	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH24	Not Provide Total Image Upload Function during Withdrawal	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
578HH25	Not Provide Note Number Detection Image Upload Function during Withdrawal	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH26	FC2 Set Error When Receive Image Information Upload Command during Withdrawal	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
578HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Withdrawal	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Withdrawal	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH3A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH3B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH3C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH3D	Not Provide Replenishment/Collect Cash Image Upload Function during Withdrawal	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HH3E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
578HI01	RecogTask Messeage Timeout Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
578HI02	ScanTask Messeage Timeout Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
578HI03	UartTask Messeage Timeout Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
578HI04	BcUsbTask Messeage Timeout Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
578HJ01	Algorithm Initialize Fail during Withdrawal	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HJ02	Algorithm Ready Fail during Withdrawal	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HJ03	Algorithm Information Set Error during Withdrawal	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
578HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Withdrawal	1. Retry the operation

Problem Code	Problem Description	Troubleshooting
578HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Withdrawal	1. Check the number of CST Setting notes info
578HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Withdrawal	1. Check Withdrawal notes setting
578HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Withdrawal	1. Check Withdrawal notes info
578HS01	FPGA Write Data Error When Initialize Scan Driver during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS05	Not Process Shading When Initialize Scan Driver during Withdrawal	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
578HS08	Fail to Set DAC When Initialize Scan Driver during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS11	FPGA Write Data Error When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS13	Fail to Set CIS Led On Value When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS14	Fail to Set Source of Scan Ligh When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS15	Not Process Shading When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS17	Fail to Set AFE Chip When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS18	Fail to Set DAC When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS19	MR/UV/DD Sampling Start Error When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS2A	Fail to Set 2-Notes DAC When BC Ready during Withdrawal	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
578HS2B	2-Notes to 1-Note Adjust Information Error When BC Ready during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
578HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS28	Fail to Set DAC When Stop BC during Withdrawal	1. Retry the operation.2. Operate to initialize BRM(Recovery)
578HS29	MR/UV/DD Sampling Stop Error When Stop BC during Withdrawal	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
578HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Withdrawal	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
578HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Withdrawal	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
578HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Withdrawal	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
578HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Withdrawal	1. Retry the operation2. Change BC
578HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Withdrawal	1. Retry the operation2. Change BC
578HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Withdrawal	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
578HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Withdrawal	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
578HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Withdrawal	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
578HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Withdrawal	1. Retry the operation2. Change BC
578HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Withdrawal	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
578HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Withdrawal	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
578HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Withdrawal	1. Retry the operation2. Change BC
578R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
578R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578S100	BCU response MI error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578S200	BCU response BCC error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578S300	BCU response Sub MI error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578S400	BCU response Parameter error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
578S900	BCU response Timeout Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57A2100	Error occurred by notes remained in GS801 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2200	Error occurred by notes remained in GS002 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2300	Error occurred by notes remained in GS003 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2400	Error occurred by notes remained in GS004 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2500	Error occurred by notes remained in GS005 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2600	Error occurred by notes remained in GS006 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
57A2700	Error occurred by notes remained in GS014 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2800	Error occurred by notes remained in GS018 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2900	Error occurred by notes remained in GS020 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2A00	Error occurred by notes remained in GS021 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2E00	Error occurred by notes remained in GS001 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2H00	Error occurred by notes remained in GS618 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2J00	Error occurred by notes remained in GS619 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2K00	Error occurred by notes remained in GS701,702 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2M00	Error occurred by notes remained in GSA01 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
57A2N00	Error occurred by notes remained in GSA02 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2P00	Error occurred by notes remained in GSA03 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2Q00	Error occurred by notes remained in GSD01 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57A2W00	Error occurred by notes remained in GS802 during Withdrawal	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
57AA100	UTC open Error before operation Withdrawal	1. Open the upper unit. 2. Check the UTC removal and reinstallation
57AA200	TSK open Error before operation Withdrawal	1. Open the upper unit. 2. Check the TSK open and close
57AA300	BMU Inter Lock Error before operation Withdrawal	1. Check BMU open and close
57AA400	BMU open Error before operation Withdrawal	1. Check BMU open and close
57AA500	Replenishment CST open Error before operation Withdrawal	1. Check the Transit CST installation
57AA600	CSM open Error before operation Withdrawal	1. Open the upper unit. 2. Check CSM Open/Close
57AA800	BMD Inter Lock Error before operation Withdrawal	1. Open the lower unit. 2. Check the BMD open and close
57AA900	BMD open Error before operation Withdrawal	1. Open the lower unit. 2. Check the BMD open and close
57AAA00	BC Open Error before operation Withdrawal	1. Open the upper unit. 2. Check BC Open/Close
57AAB00	RC Full Error before operation Withdrawal	1. Open the lower unit. 2. Check RC Full and remove notes
57AAC00	RJC Full Error before operation Withdrawal	1. Open the upper unit. 2. Check RJC Full and remove notes
57AAD00	UTC Full Error before operation Withdrawal	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
57AAE00	RTC Full Error before operation Withdrawal	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
57AAF00	RC Empty Error before operation Withdrawal	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
57AAG00	Suspected note RC open Error before operation Withdrawal	1. Open the lower unit. 2. Check the RC removal and reinstall

Problem Code	Problem Description	Troubleshooting
57AAJ00	Withdrawal is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
57AE100	Received operation command without Initial Info Set during Withdrawal	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
57AE200	Status on not operation reception command during Withdrawal	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
57AE300	Received operation command without System Info Read during Withdrawal	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
57AE400	Transaction was executed without Initializing after power on during Withdrawal	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
57AEE00	RBU RS485 communication sequence disorder during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
57AEF00	RBU RS485 connection line disorder during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
57AEL00	RBU communication was not ready after power on during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
57AH600	Failure to check clearing NVRAM during Withdrawal	1. Operate to initialize BRM(Recovery)
57AHF00	Transaction count exists but GS801A sensor no change during Withdrawal	1. Check GS801A2. Operate to initialize BRM(Recovery)
57AHG00	Transaction count exists but GS801B sensor no change during Withdrawal	1. Check GS801B2. Operate to initialize BRM(Recovery)
57AHH00	Transaction count exists but GS802A sensor no change during Withdrawal	1. Check GS802A2. Operate to initialize BRM(Recovery)
57AHJ00	Transaction count exists but GS802B sensor no change during Withdrawal	1. Check GS802B2. Operate to initialize BRM(Recovery)
57ANA00	CSM stack count is different with BC Normal Pass count during Withdrawal	1. Operate to initialize BRM(Recovery)
57ANF00	UTC stack count is different with fake count during withdrawal	1. Operate to initialize BRM(Recovery)
57ANL00	Request count is more than Residue count during withdrawal	1. Check RC actual count and SPL screen count.2. Setting RC count match actual count.3. Operate to initialize BRM(Recovery)
57AR100	Message timeout error during operation ready during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57AR200	Message timeout error during transation operation during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57AR300	Message timeout error during error postprocessing during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
57AR800	RBU/BC sensor auto dimming response message timeout error during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ARC00	BC response message timeout error during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ARJ00	Message timeout error during Stop Ready during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57AS700	Comparative error when denomination/note count set during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASB00	No UTC to stack forged/doubted notes in case of forged/doubted note detection setting during withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASD00	Set Count in DPC or RJC during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASM00	RC6 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASP00	RC7 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASR00	Max withdrawal count excess request error during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASS00	RC1 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57AST00	RC2 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASU00	RC3 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASV00	RC4 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASW00	RC5 is not possible for Withdrawal during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASX00	Requested withdrawal count is more than the Residue in the Cassette during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
57ASY00	Requested count is 0 during Withdrawal	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
57ASZ00	No Separation RC during Withdrawal+Requested count 0 or RC breakdown) during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57BH100	RC1 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH200	RC2 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH300	RC3 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH400	RC4 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH500	RC5 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH600	RC6 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH700	RC1 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH800	RC2 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BH900	RC3 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BHA00	RC4 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BHB00	RC5 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BHC00	RC6 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BHD00	RC1 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
57BHE00	RC2 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
57BHF00	RC3 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
57BHG00	RC4 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
57BHH00	RC5 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
57BHJ00	RC6 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
57BHK00	BMD Open Error During EEPROM Read/Write during Withdrawal	1. Check the lower Unit load/removal
57BHU00	BMD EEPROM Read Error during Withdrawal	1. Replace RBU B/D
57BHV00	BMD EEPROM Write Error during Withdrawal	1. Replace RBU B/D
57BHW00	BMD EEPROM Verify Error during Withdrawal	1. Replace RBU B/D
57BHX00	RC7 EEPROM Read Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BHY00	RC7 EEPROM Write Error during Withdrawal	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
57BHZ00	RC7 EEPROM Verify Error during Withdrawal	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
57BR000	RBU Response Timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57BR700	RBU Response Message Timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57BS100	RBU RS-232 Seq Num Echo Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57BS200	RBU RS-232 MI Echo Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57BSS00	RBU Auto Calibration Command Parameter Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57C0100	RC6 GSC01 Light Jam during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C0200	RC6 GSC02 Light Jam during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C0500	RC6 GSC05 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(8)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
57C0Z00	RC6 All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57C1100	RC6 GSC01 Dark Jam during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C1200	RC6 GSC02 Dark Jam during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C1500	RC6 GSC05 Dark Jam during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C1Z00	RC6 All Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
57C2100	Error occurred by notes remained in RC6 GSC01 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C2200	Error occurred by notes remained in RC6 GSC02 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C2500	Error occurred by notes remained in RC6 GSC05 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C2Z00	Error occurred by notes remained in RC6 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57C3100	Sensor auto calibration error in RC6 GSC01 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C3200	Sensor auto calibration error in RC6 GSC02 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C3500	Sensor auto calibration error in RC6 GSC05 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C3Z00	Sensor auto calibration error in RC6 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57C4100	Extern lights check error in RC6 GSC01 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C4200	Extern lights check error in RC6 GSC02 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C4500	Extern lights check error in RC6 GSC05 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C4Z00	Extern lights check error in RC6 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57C5100	Path error on transport path in RC6 GSC01 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C5200	Path error on transport path in RC6 GSC02 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C5500	Path error on transport path in RC6 GSC05 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C5Z00	Path error on transport path in RC6 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57C6100	Path error on sensor except for transport path in RC6 GSC01 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C6200	Path error on sensor except for transport path in RC6 GSC02 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C6500	Path error on sensor except for transport path in RC6 GSC05 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C6Z00	Path error on sensor except for transport path in RC6 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57C7100	Error occurred by the notes disorder in RC6 GSC01 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C7200	Error occurred by the notes disorder in RC6 GSC02 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C7500	Error occurred by the notes disorder in RC6 GSC05 during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57C7Z00	Error occurred by the notes disorder in RC6 All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57CC100	RC6 Miss-Pickup during Withdrawal	1. Open the lower unit.2. Open the Mid Transport Path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check the upper and the notes.
57CC200	Exceeded number of retries for RC6 separation error during Withdrawal.	1. Open the lower unit.2. Open the Mid Transport Path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check the upper and the notes.
57CC400	RJC Last Note No Front detect during Withdrawal	1. Open the lower unit.2. Open the Mid Transport Path.3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
57CG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57CG200	RC6 Failure to move PP to stack position during Withdrawal	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
57CG400	RC6 Failure to upword moving of PP during RC6 stack roller retreat movement during Withdrawal	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
57CG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Withdrawal	1. Open the lower unit.2. Open the Mid Transport Path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CG600	RC6 Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Open the lower unit.2. Open the Mid Transport Path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
57CG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
57CGA00	RC6 RC Solenoid Echo error during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
57CGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57CGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
57CFG00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
57CGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
57CGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57CGQ00	RJC Press and Stack position fail during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
57CGR00	RJC Stack position fail during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
57CGS00	RC6 RJC Press position fail during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
57CGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
57CGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
57CGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
57CGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Withdrawal	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
57CGX00	RC6 GSC01 detects notes during RJC intialize during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57CJ100	RC6 RJC Full during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
57CJ200	RC6 RC No Residue during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8).5. Fill up the Notes if there are no notes
57CJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
57CK100	RC6 separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57CNL00	RC6 Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check RC6 actual count and SPL screen count.2. Setting RC6 count match actual count.3. Operate to initialize BRM(Recovery)
57CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CRF00	RC6 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CRP00	RC6 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CS200	RC6 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CS300	RC6 Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CSA00	RC6 Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CSR00	RC6 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57CSZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57E0100	CST GS901 Light Jam during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E0200	CST GS902 Light Jam during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E0500	CST GS905 Light Jam during Withdrawal	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
57E0Z00	CST All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57E1100	CST GS901 Dark Jam during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E1200	CST GS902 Dark Jam during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E1500	CST GS905 Dark Jam during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E1Z00	CST All Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
57E2100	Error occurred by notes remained in CST GS901 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E2200	Error occurred by notes remained in CST GS902 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E2500	Error occurred by notes remained in CST GS905 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E2Z00	Error occurred by notes remained in CST All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57E3100	Sensor auto calibration error in CST GS901 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E3200	Sensor auto calibration error in CST GS902 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E3500	Sensor auto calibration error in CST GS905 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E3Z00	Sensor auto calibration error in CST All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57E4100	Extern lights check error in CST GS901 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E4200	Extern lights check error in CST GS902 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
57E4500	Extern lights check error in CST GS905 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E4Z00	Extern lights check error in CST All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57E5100	Path error on transport path in CST GS901 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E5200	Path error on transport path in CST GS902 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E5500	Path error on transport path in CST GS905 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E5Z00	Path error on transport path in CST All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57E6100	Path error on sensor except for transport path in CST GS901 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E6200	Path error on sensor except for transport path in CST GS902 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E6500	Path error on sensor except for transport path in CST GS905 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E6Z00	Path error on sensor except for transport path in CST All during Withdrawal	1. Operate to initialize BRM.(Recovery)
57E7100	Error occurred by the notes disorder in CST GS901 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E7200	Error occurred by the notes disorder in CST GS902 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E7500	Error occurred by the notes disorder in CST GS905 during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57E7Z00	Error occurred by the notes disorder in CST All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57EC100	CST Miss-Pickup during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
57EC200	Exceeded number of retries for CST separation error during Withdrawal.	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
57EC400	CST Last Note No Front detect during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
57EG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57EG200	CST Failure to move PP to stack position during Withdrawal	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
57EG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Withdrawal	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
57EG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EG600	CST Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Withdrawal	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
57EGA00	CST RC Solenoid Echo error during Withdrawal	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
57EGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
57EGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.

Problem Code	Problem Description	Troubleshooting
57EGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
57EGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EGK00	CST RC Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
57EJ200	CST No Residue during Withdrawal	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
57EJ300	CST Full,Bottom no detect before move RC PP to stack position during Withdrawal	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
57EK100	CST separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)
57ENL00	CST Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check CST actual count and SPL screen count.2. Setting CST count match actual count.3. Operate to initialize BRM(Recovery)
57ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ERF00	CST Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
57ERP00	CST PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ES200	CST Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ES300	CST RC Task not for separation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ESA00	CST RC Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ESR00	CST Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57ESZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57F0100	RC7 GSF01 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F0200	RC7 GSF02 Light Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F0500	RC7 GSF05 Light Jam during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
57F0Z00	RC7 All Light Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)
57F1100	RC7 GSF01 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F1200	RC7 GSF02 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F1500	RC7 GSF05 Dark Jam during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F1Z00	All RC7 Sensor Dark Jam during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57F2100	Error occurred by notes remained in RC7 GSF01 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F6500	RC7 GSF05 Path error on sensor except for transport path during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F6Z00	RC7 All Path error on sensor except for transport path during Withdrawal	1. Operate to initialize BRM.(Recovery)
57F7100	Error occurred by the notes disorder in RC7 GSF01 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F7200	Error occurred by the notes disorder in RC7 GSF02 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F7500	Error occurred by the notes disorder in RC7 GSF05 during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57F7Z00	Error occurred by the notes disorder in RC7 All during Withdrawal	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
57FC100	RC Miss-Pickup during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
57FC200	Exceeded number of retries for RC7 separation error during Withdrawal.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F)..4. Put down the Stage after open the cassette(F) door.5. Remove note in the upper side.6. Check the upper and the notes.
57FG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57FG200	RC7 Failure to move PP to stack position during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
57FG400	RC7 Failure to upword moving of PP during RC7 stack roller retreat movement during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
57FG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FG600	RC7 Stack Roller retreat position disorder during RC Separation during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
57FGA00	RC7 Solenoid Echo error during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
57FGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
57FGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
57FGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
57FGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
57FGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FGK00	RC7 Stack Roller retreat fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Withdrawal	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
57FJ200	RC7 No Residue during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A).5. Fill up the Notes if there are no notes
57FJ300	Full,Bottom no detect before move RC7 PP to stack position during Withdrawal	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
57FK100	RC7 separation request notes is 0 during Withdrawal	1. Operate to initialize BRM.(Recovery)
57FNL00	RC7 Requested notes is more than Residue notes,separation stop during Withdrawal	1. Check RC7 actual count and SPL screen count.2. Setting RC7 count match actual count.3. Operate to initialize BRM(Recovery)
57FRF00	RC7 Feed Motor response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
57FRP00	RC7 PP response timeout during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57FS200	RC7 Receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57FS300	RC7 Task not for sepratation receive separation command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57FSA00	RC7 Sub Task receive undefined command during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57FSR00	RC7 Sub Task for Wait Setting Error during Withdrawal	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
57US100	USB Bulk Sequence Error during Withdrawal.	1. Restart over AP-SP
57US300	USB Bulk Received Length Error during Withdrawal.	1. Reboot the system
57US400	Message transmission Error from USB to Main Task during Withdrawal.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
57US500	Message reception Error from MainTask to USB during Withdrawal.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
57USCMD	Bulk command data check error during Withdrawal. (USB communication failure)	1. Restart over AP-SP
57USCRC	CRC data check error during Withdrawal. (USB communication failure)	1. Restart over AP-SP
57USLEN	Bulk length error during Withdrawal. (USB communication failure)	1. Restart over AP-SP
581R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
581R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
581R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
581R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
582R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
582R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
582R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
582R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5830100	RC3 GS301 Light Jam during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5830200	RC3 GS302 Light Jam during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5830500	RC3 GS305 Light Jam during Notes Out	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5831100	RC3 GS301 Dark Jam during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5831200	RC3 GS302 Dark Jam during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5831500	RC3 GS305 Dark Jam during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5832100	Error occurred by notes remained in RC3 GS301 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5832200	Error occurred by notes remained in RC3 GS302 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5832500	Error occurred by notes remained in RC3 GS305 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5833100	Sensor auto calibration error in RC3 GS301 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5833200	Sensor auto calibration error in RC3 GS302 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5833500	Sensor auto calibration error in RC3 GS305 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5834100	Extern lights check error in RC3 GS301 during Notes Out	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
585R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
585R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
585R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
585R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5862100	CSM Residue Error during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5862200	CSM No separation notes Error during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5862300	CSM insert notes excess Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5862500	CSM notes disappear Error during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5862600	CSM notes appear Error during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
586Z00	CSM Residue Error during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
586B100	CSM Notes insert position Error during Notes Out	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
586B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 중) after ready separation during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586B300	CSM Separate Mis-pickup during Notes Out	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
586B400	CSM Separate disorder Jam (Front Skew) during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586B600	CSM Separate disorder Jam (Over Max Length) during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586B700	CSM Separate disorder Jam (Less Min Length) during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586B800	CSM Separate disorder Dark Jam during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586B900	CSM Low speed control 30 times over Error during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586BA00	CSM Over separation notes during collect lost notes during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586BE00	CSM Residue Notes in separation part after separation during Notes Out	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
586G100	Fail to move CSM BP to Stack Position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
586G200	Fail to move CSM BP to Deposit Position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
586G300	Fail to move CSM BP to Separation Position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
586G500	Fail to move CSM BP to Note-Out Position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
586G600	Fail to move CSM P-Roller to Home position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
586G800	Fail to CSM return notes during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
586G900	CSM GM601 Step out during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
586GA00	Fail to move CSM BP to return note Position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
586GB00	Fail to move CSM FP to Deposit Position during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
586GF00	Fail to move CSM G-Roller to Homeposition during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
586GG00	Fail to move both CSM P/G-Roller to Homeposition during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
586M200	CSM Inner Shutter Open Error during Notes Out	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
586M300	CSM Inner Shutter Close Error during Notes Out	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
586M700	CSM Inner Shutter Open during Stack during Notes Out	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
586M800	CSM Stopper Home position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
586M900	CSM Stopper Stack position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
586MB00	CSM Bill Supporter Up position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
586MC00	CSM Bill Supporter Down position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
586P100	CSM PP Withdrawal(Stack) position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
586P200	CSM PP Deposit position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
586P300	CSM PP Separation position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
586P400	CSM PP collect lost notes position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
586P500	CSM PP Note-out position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
586P600	CSM PP Note-arrange position Fail during Notes Out	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

588HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Notes Out	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG03	BC Transaction Ready Fail When Receive BC READY Command during Notes Out	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
588HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Notes Out	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Notes Out	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Notes Out	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG07	Receive BC Unknown Command during Notes Out	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
588HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Notes Out	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Notes Out	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Notes Out	1. Check the BC recognition DB of country.2. Download DB again after delecting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
588HG11	No Nation Code When Receive BC READY Command during Notes Out	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Notes Out	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
588HG20	Fail to Initialize CIS When Receive BC READY Command during Notes Out	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
588HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Notes Out	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
588HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Notes Out	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
588HG23	DD Sensor DAC Set Error When Receive BC READY Command during Notes Out	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
588HG24	ENCODER Mode Set Error When Receive BC READY Command during Notes Out	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
588HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Notes Out	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Notes Out	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Notes Out	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Notes Out	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Notes Out	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Notes Out	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Notes Out	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command <b>위조지폐 목록 검색 구분 설정 오류</b> (Classification Value is Not 1, 2, 3 ) during Notes Out	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Notes Out	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HG4A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Notes Out	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG4B	Over The Number of BC MODE SET Back Codes (Over 15) during Notes Out	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
588HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Notes Out	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Notes Out	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Notes Out	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Notes Out	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Notes Out	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Notes Out	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG46	Bill Number Error When Receive Check No Write Command during Notes Out	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Notes Out	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG48	Bill Number Table CRC Error When Receive Check No Write Command during Notes Out	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Notes Out	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HH01	Fail to Delete NAND FLASH during Notes Out	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
588HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Notes Out	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
588HH03	Fail to Download Detection DB during Notes Out	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
588HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Notes Out	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
588HH05	Detection DB Download File Check Error during Notes Out	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
588HH06	Detection DB Download File Size Error during Notes Out	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
588HH07	DB Table Save Error After Download Detection DB during Notes Out	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
588HH08	Over Detection DB Download (Over 10) during Notes Out	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
588HH09	Detection DB Header Information Error during Notes Out	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
588HH10	EP Download Fail during Notes Out	1. Re-download BC EP.2. Change the BC B/D if continuous error.
588HH11	EP Download Check Error during Notes Out	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
588HH12	EP Download File Size Error during Notes Out	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
588HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Notes Out	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
588HH14	BC FPGA Download Fail during Notes Out	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
588HH15	Header Information Save Error After BC FPGA Download during Notes Out	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
588HH16	Not Provide BC FPGA Download during Notes Out	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
588HH17	EEPROM READ/WRITE Error during Notes Out	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
588HH18	Receive Unit Serial Number Undefined Option during Notes Out	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
588HH19	Receive USB Undefined Command during Notes Out	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
588HH20	No BC Process Note When Receive Image Upload Command during Notes Out	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH21	FC1 Set Error When Receive Image Upload Command during Notes Out	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH22	BC is Processing Note When Receive Image Upload Command during Notes Out	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH23	FC2 Set Error When Receive Image Upload Command during Notes Out	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH24	Not Provide Total Image Upload Function during Notes Out	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
588HH25	Not Provide Note Number Detection Image Upload Function during Notes Out	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH26	FC2 Set Error When Receive Image Information Upload Command during Notes Out	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Notes Out	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Notes Out	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Notes Out	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH3A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Notes Out	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH3B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Notes Out	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH3C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Notes Out	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH3D	Not Provide Replenishment/Collect Cash Image Upload Function during Notes Out	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HH3E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Notes Out	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
588HI01	RecogTask Messeage Timeout Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
588HI02	ScanTask Messeage Timeout Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
588HI03	UartTask Messeage Timeout Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
588HI04	BcUsbTask Messeage Timeout Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
588HJ01	Algorithm Initialize Fail during Notes Out	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
588HJ02	Algorithm Ready Fail during Notes Out	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HJ03	Algorithm Information Set Error during Notes Out	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
588HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Notes Out	1. Retry the operation
588HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Notes Out	1. Check the number of CST Setting notes info
588HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Notes Out	1. Check Withdrawal notes setting
588HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Notes Out	1. Check Withdrawal notes info
588HS01	FPGA Write Data Error When Initialize Scan Driver during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS05	Not Process Shading When Initialize Scan Driver during Notes Out	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
588HS08	Fail to Set DAC When Initialize Scan Driver during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS11	FPGA Write Data Error When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS13	Fail to Set CIS Led On Value When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS14	Fail to Set Source of Scan Ligh When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS15	Not Process Shading When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS17	Fail to Set AFE Chip When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS18	Fail to Set DAC When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
588HS19	MR/UV/DD Sampling Start Error When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS2A	Fail to Set 2-Notes DAC When BC Ready during Notes Out	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
588HS2B	2-Notes to 1-Note Adjust Information Error When BC Ready during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS28	Fail to Set DAC When Stop BC during Notes Out	1. Retry the operation.2. Operate to initialize BRM(Recovery)
588HS29	MR/UV/DD Sampling Stop Error When Stop BC during Notes Out	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
588HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Notes Out	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
588HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Notes Out	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
588HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Notes Out	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
588HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Notes Out	1. Retry the operation2. Change BC
588HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Notes Out	1. Retry the operation2. Change BC
588HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Notes Out	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
588HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Notes Out	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
588HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Notes Out	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
588HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Notes Out	1. Retry the operation2. Change BC
588HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Notes Out	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
588HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Notes Out	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
588HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Notes Out	1. Retry the operation2. Change BC
588R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
588R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588S100	BCU response MI error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588S200	BCU response BCC error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588S300	BCU response Sub MI error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588S400	BCU response Parameter error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
588S900	BCU response Timeout Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58AA100	UTC open Error before operation Notes Out	1. Open the upper unit. 2. Check the UTC removal and reinstallation
58AA200	TSK open Error before operation Notes Out	1. Open the upper unit. 2. Check the TSK open and close
58AA300	BMU Inter Lock Error before operation Notes Out	1. Check BMU open and close
58AA400	BMU open Error before operation Notes Out	1. Check BMU open and close
58AA500	Replenishment CST open Error before operation Notes Out	1. Check the Transit CST installation
58AA600	CSM open Error before operation Notes Out	1. Open the upper unit. 2. Check CSM Open/Close
58AA800	BMD Inter Lock Error before operation Notes Out	1. Open the lower unit. 2. Check the BMD open and close
58AA900	BMD open Error before operation Notes Out	1. Open the lower unit. 2. Check the BMD open and close
58AAA00	BC Open Error before operation Notes Out	1. Open the upper unit. 2. Check BC Open/Close
58AAB00	RC Full Error before operation Notes Out	1. Open the lower unit. 2. Check RC Full and remove notes
58AAC00	RJC Full Error before operation Notes Out	1. Open the upper unit. 2. Check RJC Full and remove notes
58AAD00	UTC Full Error before operation Notes Out	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC

Problem Code	Problem Description	Troubleshooting
58AAE00	RTC Full Error before operation Notes Out	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
58AAF00	RC Empty Error before operation Notes Out	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
58AAG00	Suspected note RC open Error before operation Notes Out	1. Open the lower unit. 2. Check the RC removal and reinstall
58AE100	Received operation command without Initial Info Set during Notes Out	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
58AE200	Status on not operation reception command during Notes Out	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
58AE300	Received operation command without System Info Read during Notes Out	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
58AE400	Transaction was executed without Initializing after power on during Notes Out	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
58AEE00	RBU RS485 communication sequence disorder during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
58AEF00	RBU RS485 connection line disorder during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
58AEL00	RBU communication was not ready after power on during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
58AH600	Failure to check clearing NVRAM during Notes Out	1. Operate to initialize BRM(Recovery)
58AR100	Message timeout error during operation ready during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58AR200	Message timeout error during transation operation during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58AR300	Message timeout error during error postprocessing during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58AR800	RBU/BC sensor auto dimming response message timeout error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58ARC00	BC response message timeout error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58ARJ00	Message timeout error during Stop Ready during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58BR000	RBU Response Timeout during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
58BR700	RBU Response Message Timeout during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58BS100	RBU RS-232 Seq Num Echo Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58BS200	RBU RS-232 MI Echo Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58BSS00	RBU Auto Calibration Command Parameter Error during Notes Out	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
58US100	USB Bulk Sequence Error during Notes Out.	1. Restart over AP-SP
58US300	USB Bulk Received Length Error during Notes Out.	1. Reboot the system
58US400	Message transmission Error from USB to Main Task during Notes Out.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
58US500	Message reception Error from MainTask to USB during Notes Out.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
58USCMD	Bulk command data check error during Notes Out. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
58USCRC	CRC data check error during Notes Out. (USB communication failure)	1. Restart over AP-SP
58USLEN	Bulk length error during Notes Out. (USB communication failure)	1. Restart over AP-SP
590R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
590R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
590R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
590SZ00	Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
591G200	RC1 Failure to move PP to stack position during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
591G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
591G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591G600	RC1 Stack Roller retreat position disorder during RC Separation during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
591GA00	RC1 Solenoid Echo error during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs

Problem Code	Problem Description	Troubleshooting
591GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
591GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Put down the Stage after open the recycle cassette door (A)5. Remove note.
591GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
591GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GK00	RC1 Stack Roller retreat fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GL00	RC1 Feed Roller homeposition fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
591GS00	RC1 RJC Press position fail during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
591GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
591GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
591GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
591GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
591GX00	RC1 GS101 detects notes during RJC intialize during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
591J100	RJC Full during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
591J200	RC1 No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
591J300	Full,Bottom no detect before move RC1 PP to stack position during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
591R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591RF00	RC1 Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591RP00	RC1 PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
591S200	RC1 Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591S300	RC1 Task not for separation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591SA00	RC1 Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
591SR00	RC1 Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5921500	RC2 GS206 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
592G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
592G200	RC2 Failure to move PP to stack position during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
592G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
592G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592G600	RC2 Stack Roller retreat position disorder during RC Separation during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
592GA00	RC2 Solenoid Echo error during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs

Problem Code	Problem Description	Troubleshooting
592GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
592GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
592GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
592GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592GK00	RC2 Stack Roller retreat fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592GL00	RC2 Feed Roller homeposition fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
592J200	RC2 No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B)5. Fill up the Notes if there are no notes

Problem Code	Problem Description	Troubleshooting
592J300	RC2 Full,Bottom no detect before move RC PP to stack position during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
592R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5937500	Error occurred by the notes disorder in RC3 GS305 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
593G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
593G200	RC3 Failure to move PP to stack position during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
593G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
593G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593G600	RC3 Stack Roller retreat position disorder during RC Separation during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
593GA00	RC3 RC Solenoid Echo error during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
593GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
593GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
593GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
593GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
593GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
593J200	RC3 No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C)5. Fill up the Notes if there are no notes
593J300	RC3 Full,Bottom no detect before move RC PP to stack position during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
593L100	Remaining notes stack process error in RC3 GS301 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
593L200	Remaining notes stack process error in RC3 GS302 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
593L500	Remaining notes stack process error in RC3 GS305 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
593R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593RF00	RC3 Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593RP00	RC3 PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593S200	RC3 Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593S300	RC3 RC Task not for separation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593SA00	RC3 RC Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
593SR00	RC3 Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5940100	RC4 GS401 Light Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5940200	RC4 GS402 Light Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5940500	RC4 GS405 Light Jam during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5941100	RC4 GS401 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5941200	RC4 GS402 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5941500	RC4 GS405 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5942100	Error occurred by notes remained in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5942200	Error occurred by notes remained in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5942500	Error occurred by notes remained in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5943100	Sensor auto calibration error in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5943200	Sensor auto calibration error in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5943500	Sensor auto calibration error in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5944100	Extern lights check error in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5944200	Extern lights check error in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5944500	Extern lights check error in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5945100	Path error on transport path in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5945200	Path error on transport path in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5945500	Path error on transport path in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5946100	Path error on sensor except for transport path in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5946200	Path error on sensor except for transport path in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5946500	Path error on sensor except for transport path in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5947100	Error occurred by the notes disorder in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5947200	Error occurred by the notes disorder in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5947500	Error occurred by the notes disorder in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
594G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
594G200	RC4 Failure to move PP to stack position during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
594G400	RC4 Failure to upward moving of PP during RC4 stack roller retreat movement during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
594G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594G600	RC4 Stack Roller retreat position disorder during RC Separation during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
594GA00	RC4 RC Solenoid Echo error during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
594GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
594GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
594GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
594GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
594GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
594J200	RC4 No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes
594J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
594L100	Remaining notes stack process error in RC4 GS401 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
594L200	Remaining notes stack process error in RC4 GS402 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
594L500	Remaining notes stack process error in RC4 GS405 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
594R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594RF00	RC4 Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594RP00	RC4 PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594S200	RC4 Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594S300	RC4 RC Task not for separation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594SA00	RC4 RC Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
594SR00	RC4 Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5950100	RC5 GS501 Light Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5950200	RC5 GS502 Light Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5950500	RC5 GS505 Light Jam during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5951100	RC5 GS501 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5951200	RC5 GS502 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5951500	RC5 GS505 Dark Jam during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5952100	Error occurred by notes remained in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5952200	Error occurred by notes remained in RC5 GS502 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5952500	Error occurred by notes remained in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5953100	Sensor auto calibration error in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5953500	Sensor auto calibration error in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5954100	Extern lights check error in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5954200	Extern lights check error in RC5 GS502 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5954500	Extern lights check error in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5955100	Path error on transport path in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5955200	Path error on transport path in RC5 GS502 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5955500	Path error on transport path in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5956100	Path error on sensor except for transport path in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5956200	Path error on sensor except for transport path in RC5 GS502 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5956500	Path error on sensor except for transport path in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5957100	Error occurred by the notes disorder in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5957200	Error occurred by the notes disorder in RC5 GS502 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5957500	Error occurred by the notes disorder in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
595G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
595G200	RC5 Failure to move PP to stack position during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
595G400	RC5 Failure to upword moving of PP during RC5 stack roller retreat movement during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
595G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595G600	RC5 Stack Roller retreat position disorder during RC Separation during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
595GA00	RC5 Solenoid Echo error during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
595GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
595GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
595GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
595GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
595GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595GK00	RC5 Stack Roller retreat fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595GL00	RC5 Feed Roller homeposition fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
595J200	RC5 No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E).5. Fill up the Notes if there are no notes
595J300	RC5 Full,Bottom no detect before move RC PP to stack position during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
595L100	Remaining notes stack process error in RC5 GS501 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
595L200	Remaining notes stack process error in RC5 GS502 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
595L500	Remaining notes stack process error in RC5 GS505 during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
595R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595RF00	RC5 Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595RP00	RC5 PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595S200	RC5 Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595S300	RC5 Task not for separation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595SA00	RC5 Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
595SR00	RC5 Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5962100	CSM Residue Error during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3. Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5962300	CSM insert notes excess Error during System Ready	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3. Remove notes and substance in the CSM(1)

Problem Code	Problem Description	Troubleshooting
5962500	CSM notes disappear Error during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5962600	CSM notes appear Error during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5962Z00	CSM Residue Error during during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
596B100	CSM Notes insert position Error during System Ready	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
596B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 중) after ready separation during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596B300	CSM Separate Mis-pickup during System Ready	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
596B400	CSM Separate disorder Jam (Front Skew) during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596B600	CSM Separate disorder Jam (Over Max Length) during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596B700	CSM Separate disorder Jam (Less Min Length) during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596B800	CSM Separate disorder Dark Jam during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596B900	CSM Low speed control 30 times over Error during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596BA00	CSM Over separation notes during collect lost notes during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
596BE00	CSM Residue Notes in separation part after separation during System Ready	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
596G100	Fail to move CSM BP to Stack Position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
596G200	Fail to move CSM BP to Deposit Position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
596G300	Fail to move CSM BP to Separation Position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
596G500	Fail to move CSM BP to Note-Out Position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
596G600	Fail to move CSM P-Roller to Home position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
596G800	Fail to CSM return notes during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
596G900	CSM GM601 Step out during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
596GA00	Fail to move CSM BP to return note Position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
596GB00	Fail to move CSM FP to Deposit Position during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
596GD00	Fail to move CSM Lift to Up position during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
596GE00	Fail to move CSM Lift to Down position during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
596GF00	Fail to move CSM G-Roller to Homeposition during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
596GG00	Fail to move both CSM P/G-Roller to Homeposition during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status

Problem Code	Problem Description	Troubleshooting
596GS00	RC6 RJC Press position fail during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
596M200	CSM Inner Shutter Open Error during System Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
596M300	CSM Inner Shutter Close Error during System Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
596M400	CSM Outer Shutter Open Error during System Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
596M500	CSM Outer Shutter Close Error during System Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
596M600	CSM Outer Shutter is Opened during System Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
596M700	CSM Inner Shutter Open during Stack during System Ready	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
596M800	CSM Stopper Home position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
596M900	CSM Stopper Stack position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
596MB00	CSM Bill Supporter Up position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
596MC00	CSM Bill Supporter Down position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
596P100	CSM PP Withdrawal(Stack) position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
596P200	CSM PP Deposit position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596P300	CSM PP Separation position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596P400	CSM PP collect lost notes position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596P500	CSM PP Note-out position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596P600	CSM PP Note-arrange position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596P800	CSM PP Control Stack Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596P900	CSM PP Return note position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596PD00	CSM PP Check semi-note Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
596PE00	CSM PP Bill SuCSM PPorter Up position Fail during System Ready	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

5972100	Error occurred by notes remained in TSK GS701 during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5972200	Error occurred by notes remained in TSK GS702 during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5972300	Error occurred by notes remained in TSK GS703,4 during System Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5972Z00	Error occurred by notes remained in TSK All Sensor during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5977100	Error occurred by the notes disorder in TSK GS701 during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5977200	Error occurred by the notes disorder in TSK GS702 during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5977300	Error occurred by the notes disorder in TSK GS703,4 during System Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5977Z00	Error occurred by the notes disorder in TSK All during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
597C200	TSK Last note unclear during separation during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
597F300	TSK GM701 F-Roller Homeposition fail during System Ready	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
597G100	GM701 Return notes fail during System Ready	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
597J100	TSK Full during System Ready	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
597L100	Remaining notes stack process error in TSK GS701 during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
597L200	Remaining notes stack process error in TSK GS702 during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
597L300	Remaining notes stack process error in TSK GS703,4 during System Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
597LZ00	Remaining notes stack process error in TSK All during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
597M100	TSK Stopper Home position for intialize fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed

Problem Code	Problem Description	Troubleshooting
597M200	TSK Stopper Stack position for initialize fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed
597M300	TSK Stopper Return note position for initialize fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed
597M400	TSK Stopper Lock FP Fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if FP(Front Plate) was obstructed
597M500	TSK Stopper Unlock FP Fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if FP(Front Plate) was obstructed
597P100	FP Sensor detect Dark Fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
597P200	FP Sensor detect Light Fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
597P300	PP Press position fail during System Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
597Q700	TSK Door Open during operation in System Ready	1. Close the door of TSK(5)
597Q900	TSK Door Release fail during operation in System Ready	1. Operate to initialize BRM(Recovery)2. Retry the operation.
597R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597RF00	TSK Feed Motor response timeout in System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597RP00	TSK PP response timeout in System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597RT00	TSK Stopper response timeout in System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
597S200	TSK Receive undefined command in System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
597SR00	TSK Sub Task for Wait Setting Error in System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598HA01	GS801A Sensor Error during System Ready	1. Check GS801A2. Operate to initialize BRM(Recovery)
598HA02	GS801B Sensor Error during System Ready	1. Check GS801B2. Operate to initialize BRM(Recovery)
598HA03	GS801A, GS801B Sensor Error during System Ready	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
598HA04	GS802A Sensor Error during System Ready	1. Check GS802A2. Operate to initialize BRM(Recovery)
598HA05	GS801A, GS802A Sensor Error during System Ready	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
598HA06	GS801B, GS802A Sensor Error during System Ready	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
598HA07	GS801A, GS801B, GS802A Sensor Error during System Ready	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
598HA08	GS802B Sensor Error during System Ready	1. Check GS802B2. Operate to initialize BRM(Recovery)
598HA09	GS801A, GS802B Sensor Error during System Ready	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
598HA10	GS801B, GS802B Sensor Error during System Ready	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
598HA11	GS801A, GS801B, GS802B Sensor Error during System Ready	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
598HA12	GS802A, GS802B Sensor Error during System Ready	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
598HA13	GS801A, GS802A, GS802B Sensor Error during System Ready	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
598HA14	GS801B, GS802A, GS802B Sensor Error during System Ready	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
598HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during System Ready	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
598HB01	MR Sensor Level Error during System Ready	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
598HC02	UV_01 Sensor Level Error during System Ready	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
598HF03	CIS Shading data loading Fail during System Ready	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
598HF04	Detection DB Table loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF05	BC FPGA Data checksum Fail during System Ready	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
598HF06	BC FPGA Configuration Fail during System Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
598HF07	BC FPGA Header Information Loading Fail during System Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
598HF08	BC FPGA Initialize Fail during System Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
598HF09	BC FPGA VERSION Fail during System Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
598HF11	Detection DB #01 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF12	Detection DB #02 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF13	Detection DB #03 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF14	Detection DB #04 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF15	Detection DB #05 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF16	Detection DB #06 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF17	Detection DB #07 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF18	Detection DB #08 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF19	Detection DB #09 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HF20	Detection DB #10 loading Fail during System Ready	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
598HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during System Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during System Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG03	BC Transaction Ready Fail When Receive BC READY Command during System Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
598HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during System Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during System Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during System Ready	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
598HG07	Receive BC Unknown Command during System Ready	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
598HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during System Ready	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG09	Nation Code Set Error When Receive BC DATA WRITE Command during System Ready	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during System Ready	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
598HG11	No Nation Code When Receive BC READY Command during System Ready	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during System Ready	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
598HG20	Fail to Initialize CIS When Receive BC READY Command during System Ready	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
598HG21	Fail to ENCODER POWER ON When Receive BC READY Command during System Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
598HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during System Ready	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
598HG23	DD Sensor DAC Set Error When Receive BC READY Command during System Ready	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
598HG24	ENCODER Mode Set Error When Receive BC READY Command during System Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
598HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during System Ready	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during System Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during System Ready	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
598HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during System Ready	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during System Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during System Ready	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during System Ready	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during System Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during System Ready	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HG4A	BC MODE SET Bill Management Level Set Error (Over 1~5) during System Ready	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG4B	Over The Number of BC MODE SET Back Codes (Over 15) during System Ready	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during System Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during System Ready	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during System Ready	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during System Ready	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during System Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during System Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
598HG46	Bill Number Error When Receive Check No Write Command during System Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during System Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG48	Bill Number Table CRC Error When Receive Check No Write Command during System Ready	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during System Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HH01	Fail to Delete NAND FLASH during System Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
598HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during System Ready	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
598HH03	Fail to Download Detection DB during System Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
598HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during System Ready	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
598HH05	Detection DB Download File Check Error during System Ready	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
598HH06	Detection DB Download File Size Error during System Ready	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
598HH07	DB Table Save Error After Download Detection DB during System Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
598HH08	Over Detection DB Download (Over 10) during System Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
598HH09	Detection DB Header Information Error during System Ready	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
598HH10	EP Download Fail during System Ready	1. Re-download BC EP.2. Change the BC B/D if continuous error.
598HH11	EP Download Check Error during System Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
598HH12	EP Download File Size Error during System Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
598HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during System Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
598HH14	BC FPGA Download Fail during System Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
598HH15	Header Information Save Error After BC FPGA Download during System Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
598HH16	Not Provide BC FPGA Download during System Ready	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
598HH17	EEPROM READ/WRITE Error during System Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
598HH18	Receive Unit Serial Number Undefined Option during System Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
598HH19	Receive USB Undefined Command during System Ready	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
598HH20	No BC Process Note When Receive Image Upload Command during System Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH21	FC1 Set Error When Receive Image Upload Command during System Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH22	BC is Processing Note When Receive Image Upload Command during System Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH23	FC2 Set Error When Receive Image Upload Command during System Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH24	Not Provide Total Image Upload Function during System Ready	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
598HH25	Not Provide Note Number Detection Image Upload Function during System Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH26	FC2 Set Error When Receive Image Information Upload Command during System Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during System Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during System Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during System Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH3A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during System Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH3B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during System Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
598HH3C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during System Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH3D	Not Provide Replenishment/Collect Cash Image Upload Function during System Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HH3E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during System Ready	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
598HI01	RecogTask Messeage Timeout Error during System Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
598HI02	ScanTask Messeage Timeout Error during System Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
598HI03	UartTask Messeage Timeout Error during System Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
598HI04	BcUsbTask Messeage Timeout Error during System Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
598HJ01	Algorithm Initialize Fail during System Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HJ02	Algorithm Ready Fail during System Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HJ03	Algorithm Information Set Error during System Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
598HK01	Table CRC Error When Set Poly-Note Withdrawal Information during System Ready	1. Retry the operation
598HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during System Ready	1. Check the number of CST Setting notes info
598HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during System Ready	1. Check Withdrawal notes setting
598HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during System Ready	1. Check Withdrawal notes info
598HS01	FPGA Write Data Error When Initialize Scan Driver during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
598HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS05	Not Process Shading When Initialize Scan Driver during System Ready	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
598HS08	Fail to Set DAC When Initialize Scan Driver during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS11	FPGA Write Data Error When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS13	Fail to Set CIS Led On Value When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS14	Fail to Set Source of Scan Ligh When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS15	Not Process Shading When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS17	Fail to Set AFE Chip When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS18	Fail to Set DAC When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS19	MR/UV/DD Sampling Start Error When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS2A	Fail to Set 2-Notes DAC When BC Ready during System Ready	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
598HS2B	2-Notes to 1-Note Adjust Information Error When BC Ready during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS28	Fail to Set DAC When Stop BC during System Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
598HS29	MR/UV/DD Sampling Stop Error When Stop BC during System Ready	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
598HS31	BC Ready Fail When Process CIS Shading – Use in Plant during System Ready	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
598HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during System Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
598HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during System Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
598HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during System Ready	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
598HS35	BC Stop Fail When Process CIS Shading – Use in Plant during System Ready	1. Retry the operation2. Change BC
598HS36	Over 10Pixel-Excess-Image When Process CIS Shading during System Ready	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
598HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during System Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
598HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during System Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
598HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during System Ready	1. Retry the operation2. Change BC
598HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during System Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
598HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during System Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
598HS43	2-Notes Adjust Flash Write Fail – Use in Plant during System Ready	1. Retry the operation2. Change BC
598R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598S100	BCU response MI error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598S200	BCU response BCC error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598S300	BCU response Sub MI error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598S400	BCU response Parameter error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
598S900	BCU response Timeout Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
59A2100	Error occurred by notes remained in GS801 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2200	Error occurred by notes remained in GS002 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2300	Error occurred by notes remained in GS003 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2400	Error occurred by notes remained in GS004 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2500	Error occurred by notes remained in GS005 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2600	Error occurred by notes remained in GS006 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2700	Error occurred by notes remained in GS014 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2800	Error occurred by notes remained in GS018 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2900	Error occurred by notes remained in GS020 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2A00	Error occurred by notes remained in GS021 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
59A2C00	Error occurred by notes remained in GS030 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2E00	Error occurred by notes remained in GS001 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2H00	Error occurred by notes remained in GS618 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2J00	Error occurred by notes remained in GS619 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2K00	Error occurred by notes remained in GS701,702 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2M00	Error occurred by notes remained in GSA01 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2N00	Error occurred by notes remained in GSA02 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2P00	Error occurred by notes remained in GSA03 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2Q00	Error occurred by notes remained in GSD01 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59A2W00	Error occurred by notes remained in GS802 during System Ready	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
59AA100	UTC open Error before operation System Ready	1. Open the upper unit. 2. Check the UTC removal and reinstallation

Problem Code	Problem Description	Troubleshooting
59AA200	TSK open Error before operation System Ready	1. Open the upper unit. 2. Check the TSK open and close
59AA300	BMU Inter Lock Error before operation System Ready	1. Check BMU open and close
59AA400	BMU open Error before operation System Ready	1. Check BMU open and close
59AA500	Replenishment CST open Error before operation System Ready	1. Check the Transit CST installation
59AA600	CSM open Error before operation System Ready	1. Open the upper unit. 2. Check CSM Open/Close
59AA800	BMD Inter Lock Error before operation System Ready	1. Open the lower unit. 2. Check the BMD open and close
59AA900	BMD open Error before operation System Ready	1. Open the lower unit. 2. Check the BMD open and close
59AAA00	BC Open Error before operation System Ready	1. Open the upper unit. 2. Check BC Open/Close
59AAB00	RC Full Error before operation System Ready	1. Open the lower unit. 2. Check RC Full and remove notes
59AAC00	RJC Full Error before operation System Ready	1. Open the upper unit. 2. Check RJC Full and remove notes
59AAD00	UTC Full Error before operation System Ready	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
59AAE00	RTC Full Error before operation System Ready	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
59AAF00	RC Empty Error before operation System Ready	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
59AAG00	Suspected note RC open Error before operation System Ready	1. Open the lower unit. 2. Check the RC removal and reinstall
59AAH00	Status of BMU loading in the BMU Test Mode before the operation during System Ready	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
59AE100	Received operation command without Initial Info Set during System Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
59AE200	Status on not operation reception command during System Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
59AE300	Received operation command without System Info Read during System Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
59AE400	Transaction was executed without Initializing after power on during System Ready	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
59AEE00	RBU RS485 communication sequence disorder during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
59AEF00	RBU RS485 connection line disorder during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization

Problem Code	Problem Description	Troubleshooting
59AEL00	RBU communication was not ready after power on during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
59AH600	Failure to check clearing NVRAM during System Ready	1. Operate to initialize BRM(Recovery)
59AR100	Message timeout error during operation ready during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59AR200	Message timeout error during transaction operation during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59AR300	Message timeout error during error postprocessing during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59AR800	RBU/BC sensor auto dimming response message timeout error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ARC00	BC response message timeout error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ARJ00	Message timeout error during Stop Ready during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59BH100	RC1 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH200	RC2 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH300	RC3 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH400	RC4 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH500	RC5 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH600	RC6 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH700	RC1 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BH800	RC2 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
59BH900	RC3 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BHA00	RC4 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BHB00	RC5 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BHC00	RC6 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BHD00	RC1 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BHE00	RC2 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BHF00	RC3 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BHG00	RC4 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BHH00	RC5 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BHQ00	RC6 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BHK00	BMD Open Error During EEPROM Read/Write during System Ready	1. Check the lower Unit load/removal
59BHU00	BMD EEPROM Read Error during System Ready	1. Replace RBU B/D
59BHV00	BMD EEPROM Write Error during System Ready	1. Replace RBU B/D
59BHW00	BMD EEPROM Verify Error during System Ready	1. Replace RBU B/D
59BHX00	RC7 EEPROM Read Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BHY00	RC7 EEPROM Write Error during System Ready	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
59BHZ00	RC7 EEPROM Verify Error during System Ready	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
59BR000	RBU Response Timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59BR700	RBU Response Message Timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
59BS100	RBU RS-232 Seq Num Echo Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59BS200	RBU RS-232 MI Echo Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59BSS00	RBU Auto Calibration Command Parameter Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
59CG200	RC6 Failure to move PP to stack position during System Ready	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
59CG400	RC6 Failure to upward moving of PP during RC6 stack roller retreat movement during System Ready	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
59CG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CG600	RC6 Stack Roller retreat position disorder during RC Separation during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
59CGA00	RC6 RC Solenoid Echo error during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
59CGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
59CGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
59CGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
59CFG00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
59CGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
59CGS00	RC6 RJC Press position fail during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
59CGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
59CGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.

Problem Code	Problem Description	Troubleshooting
59CGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
59CGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during System Ready	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
59CGX00	RC6 GSC01 detects notes during RJC intialize during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
59CJ100	RC6 RJC Full during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
59CJ200	RC6 RC No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
59CJ300	RC6 Full,Bottom no detect before move RC PP to stack position during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
59CR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CRF00	RC6 Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CRP00	RC6 PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CS200	RC6 Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CS300	RC6 Task not for sepratation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59CSA00	RC6 Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
59CSR00	RC6 Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59EG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
59EG200	CST Failure to move PP to stack position during System Ready	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
59EG400	CST Failure to upword moving of PP during RC stack roller retreat movement during System Ready	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
59EG500	CST Failure to stack roller retreat (GS913 Sensor no change) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EG600	CST Stack Roller retreat position disorder during RC Separation during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during System Ready	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
59EGA00	CST RC Solenoid Echo error during System Ready	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
59EGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
59EGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
59EGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
59EGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
59EGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EGK00	CST RC Stack Roller retreat fail (Motor speed error) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during System Ready	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
59EJ200	CST No Residue during System Ready	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
59EJ300	CST Full,Bottom no detect before move RC PP to stack position during System Ready	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
59ER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ERF00	CST Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ERP00	CST PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ES200	CST Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ES300	CST RC Task not for separation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59ESA00	CST RC Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
59ESR00	CST Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59FGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during System Ready	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(F) door.5. Remove note.
59FJ200	RC7 No Residue during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
59FJ300	Full,Bottom no detect before move RC7 PP to stack position during System Ready	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
59FRF00	RC7 Feed Motor response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59FRP00	RC7 PP response timeout during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59FS200	RC7 Receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59FS300	RC7 Task not for separation receive separation command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59FSA00	RC7 Sub Task receive undefined command during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59FSR00	RC7 Sub Task for Wait Setting Error during System Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
59US100	USB Bulk Sequence Error during System ready.	1. Restart over AP-SP
59US300	USB Bulk Received Length Error during System ready.	1. Reboot the system
59US400	Message transmission Error from USB to Main Task during System ready.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
59US500	Message reception Error from MainTask to USB during System ready.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
59USCMD	Bulk command data check error during System Ready. (USB communication failure)	1. Restart over AP-SP
59USCRC	CRC data check error during System Ready. (USB communication failure)	1. Restart over AP-SP
59USLEN	Bulk length error during System Ready. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
5@AHA00	Checksum disorder when MAIN EP Download	1. Check the download bin file2. Change the bin file
5@AHB00	Flash Rom write failure when MAIN EP Download	1. Change MAIN board when same error occurred after retry download
5@AHC00	EP downgrade of this version is not supported	1. Download higher version EP2. Download EP after decryption
5@CMD00	Bulk command data check error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5@CRC00	CRC data check error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5@LEN00	Bulk length error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5@US300	USB command data length error during applying encryption.	1. Restart over AP-SP
5@US700	Not in CE certification status when receiving C8 command	1. Retry encryption authentication session
5@US800	C8 command received unencrypted	1. Retry encryption authentication session
5@USA00	Error to compare critical information 1 from 0xC1 command during applying encryption.	1. Restart over AP-SP
5@USB00	Error to compare critical information 2 from 0xC1 command during applying encryption.	1. Restart over AP-SP
5@USC00	Error to compare EPRN from 0xEE command during applying encryption.	1. Restart over AP-SP
5@USCMD	Bulk command data check error during applying encryption. (USB communication failure)	1. Restart over AP-SP
5@USCRC	CRC data check error during applying encryption. (USB communication failure)	1. Restart over AP-SP
5@USD00	Security session status is not AUTH_SUCCESS from 0xEE command during applying encryption.	1. Restart over AP-SP
5@USE00	Error to perform security Libray API during applying encryption.(0xC1 Error to open EP)	1. Restart over AP-SP
5@USF00	Error to perform security Libray API during applying encryption.(0xC2 Error to done EP)	1. Restart over AP-SP
5@USG00	Error to perform security Libray API during applying encryption.(0xEE Error to received full text deciphering)	1. Restart over AP-SP
5@USH00	Error to read NVRAM from 0xC1 during applying encryption.	1. Restart over AP-SP
5@USJ00	Error to write NVRAM from 0xC1 during applying encryption.	1. Restart over AP-SP
5@USK00	When received C1 in previous encryption during applying encryption, exist information 1, 2.	1. Restart over AP-SP
5@USL00	When received plain text during applying encryption, exist critical information 1, 2.	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
5@USLEN	Bulk length error during applying encryption. (USB communication failure)	1. Restart over AP-SP
5@USM00	When to resend encryption bulk during applying encryption, It's not critical information 1, 2.	1. Restart over AP-SP
5@USN00	Authentication was established using DH encryption, but C1 commands were received instead of DH encryption.	1. Retry encryption authentication session
5@USO00	When receiving C1 command, EP public key generation fails	1. Retry encryption authentication session
5@USP00	Received undefined command during applying encryption.	1. Restart over AP-SP
5@USQ00	Failed to encryption during applying encryption.	1. Restart over AP-SP
5@USR00	Failed to encryption mode at EP DONE during applying encryption.	1. Restart over AP-SP
5@USS00	Undefined command at C1, C2 during applying encryption .	1. Restart over AP-SP
5@UST00	Failed to encryption at resending bulk during applying encryption.	1. Restart over AP-SP
5@USU00	When received C1 during applying encryption, critical information 1 is NULL	1. Restart over AP-SP
5@USV00	When received C1 during applying encryption, critical information 2 is NULL	1. Restart over AP-SP
5@USX00	When receiving C1 command, DH encryption key creation fails.	1. Retry encryption authentication session
5@USY00	When receiving a C2 command, decryption of CE encryption information fails	1. Retry encryption authentication session
5@USZ00	When using DH encryption mode, writing encryption mode signature to NVRAM fails	1. Retry encryption authentication session
5A00100	GS801 Light Jam error during Collect CSM notes	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5A00200	GS002 Light Jam error during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A00300	GS003 Light Jam error during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5A00400	GS004 Light Jam error during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A00500	GS005 Light Jam error during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A00600	GS006 Light Jam error during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07C00	Error occurred by the notes disorder in GS030 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07E00	Error occurred by the notes disorder in GS001 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07H00	Error occurred by the notes disorder in GS618 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07J00	Error occurred by the notes disorder in GS619 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07M00	Error occurred by the notes disorder in GSA01 during Collect CSM notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07N00	Error occurred by the notes disorder in GSA02 during Collect CSM notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07P00	Error occurred by the notes disorder in GSA03 during Collect CSM notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5A07Q00	Error occurred by the notes disorder in GSD01 during Collect CSM notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5A07W00	Error occurred by the notes disorder in GS802 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5A0D100	Reject excess error (continue Reject error) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0D200	Reject excess error (notes excess error) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0D300	Reject excess error (Unappointed notes error) during Collect CSM notes	1. Check the Deposited Denomination
5A0D400	Reject excess error (Cassette note error) during Collect CSM notes	1. Check the Deposited Denomination
5A0D500	Reject excess error (2notes) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0D600	Reject excess error (Gap error(1note)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0D700	Reject excess error (Gap error(2notes)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0D800	Reject excess error (skew error) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0D900	Reject excess error (shift error) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DA00	Reject excess error (Max length error(1note)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DB00	Reject excess error (Max length error(2notes)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DC00	Reject excess error (Max length error(3notes)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DD00	Reject excess error (Max length error(4notes)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DE00	Reject excess error (Min length error(1note)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DF00	Reject excess error (Min length error(2notes)) during Collect CSM notes	1. Open the upper unit2. Open the shutter of CSM3. Check the seperate part status of CSM
5A0DG00	Reject excess error (note error) during Collect CSM notes	1. Check the Deposited Denomination
5A0DH00	Reject excess error (MR error) during Collect CSM notes	1. Check the Notes(Failure to Notes recognition)
5A0DJ00	Reject excess error (IR error) during Collect CSM notes	1. Check the Notes(Failure to Notes recognition)
5A0DK00	Reject excess error (Edge error) during Collect CSM notes	1. Check the Notes(Failure to Notes recognition)

Problem Code	Problem Description	Troubleshooting
5A0DL00	Reject excess error (Image error) during Collect CSM notes	1. Check the Notes(Failure to Notes recognition)
5A0DM00	Reject excess error (UV error) during Collect CSM notes	1. Check the Notes(Failure to Notes recognition)
5A0DN00	Reject excess error (Sensor error) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DO00	Deposit count disallowed notes reject excess error during Collect CSM notes	Return the Notes to customer(Semi OK Code)
5A0DP00	Reject excess error (Communication error) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DQ00	Reject excess error (Full & etc) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DR00	Recognition Fail Error (Recognition test fail) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DS00	Recognition Fail Error (No Recognition info) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DT00	Recognition Fail Error (Only STX in Recognition info) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DU00	Recognition Fail Error (Recognition info BCC NG) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DV00	Recognition Fail Error (Recognition info MI NG) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DW00	Recognition Fail Error (Recognition info Index Fail) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DX00	Recognition Fail Error (Info BC Pass Info) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0DY00	Recognition Fail Error (Serial Number Data Format error) during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0F100	GM001 motor doesn't operate at a constant speed when the motor works during Collect CSM notes	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5A0F200	GM002 motor doesn't operate at a constant speed when the motor works during Collect CSM notes	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5A0F400	GM004 motor doesn't operate at a constant speed when the motor works during Collect CSM notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5A0F600	GM006 motor doesn't operate at a constant speed when the motor works during Collect CSM notes	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5A0F700	GM007 motor doesn't operate at a constant speed when the motor works during Collect CSM notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
5A0F900	GM009 motor doesn't operate at a constant speed when the motor works during Collect CSM notes	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5A0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect CSM notes	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5A0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect CSM notes	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5A0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect CSM notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5A0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect CSM notes	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5A0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect CSM notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5A0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect CSM notes	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
5A0FY00	Fail to Start BM Low Speed Control during Collect CSM notes (Motor Encoder Error)	1. Open the lower, upper unit2. Check remained Notes and substance in the upper, lower Transport Path3. Check motor encoder sensors4. Initialize
5A0G100	Failure to 3Way Gate 0 degree mode conversion during Collect CSM notes	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5A0G200	Failure to 3Way Gate 120 degree mode conversion during Collect CSM notes	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5A0GB00	Time Out to 3Way Gate Mode conversion during Collect CSM notes	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5A0GC00	Failure to RTRJ Gate RJC Mode conversion during Collect CSM notes	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5A0GD00	Failure to RTRJ Gate RTC Mode conversion during Collect CSM notes	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate

Problem Code	Problem Description	Troubleshooting
5A0K100	Duplication S/N Error during Collect CSM notes	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5A0N400	Jam Message Receive Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A0NA00	Checksum error when notes separate from TSK during Collect CSM notes	1. Operate to initialize BRM(Recovery)
5A0NC00	length different from separation part to stack part after transport during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A0NK00	BC recognized notes have no cassette to be stacked during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A0Q100	UTC detachment Error during Collect CSM notes	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5A0Q200	TSK detachment Error during Collect CSM notes	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5A0Q300	BMU Inter Lock Error during Collect CSM notes	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5A0Q400	BMU detackment Error during Collect CSM notes	1. Check Load/Removal of the upper unit
5A0Q500	Replenishment CST detachment Error during Collect CSM notes	1. Check the safe door open
5A0Q600	CSM detackment Error during Collect CSM notes	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
5A0Q800	BMD Inter Lock Error during Collect CSM notes	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5A0Q900	BMD detachment Error during Collect CSM notes	1. Check the lower Unit load/removal
5A0QA00	BC Open Error during Collect CSM notes	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5A0QS00	Receive Error Stop CMD during Collect CSM notes	1. Initialize
5A0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A0SZ00	Receive undefined command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5A1J100	RJC Full during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5A1J200	RC1 No Residue during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5A1J300	Full,Bottom no detect before move RC1 PP to stack position during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5A1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A2J200	RC2 No Residue during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B)5. Fill up the Notes if there are no notes
5A2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5A2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A30100	RC3 GS301 Light Jam during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5A30200	RC3 GS302 Light Jam during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A30500	RC3 GS305 Light Jam during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5A31100	RC3 GS301 Dark Jam during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A31200	RC3 GS302 Dark Jam during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A31500	RC3 GS305 Dark Jam during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A32100	Error occurred by notes remained in RC3 GS301 during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A32200	Error occurred by notes remained in RC3 GS302 during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A32500	Error occurred by notes remained in RC3 GS305 during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A33100	Sensor auto calibration error in RC3 GS301 during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A33200	Sensor auto calibration error in RC3 GS302 during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5A33500	Sensor auto calibration error in RC3 GS305 during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5A62100	CSM Residue Error during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5A62200	CSM No separation notes Error during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5A62300	CSM insert notes excess Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5A62500	CSM notes disappear Error during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5A62600	CSM notes appear Error during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5A62Z00	CSM Residue Error during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6B100	CSM Notes insert position Error during Collect CSM notes	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
5A6B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 등) after ready separation during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6B300	CSM Separate Mis-pickup during Collect CSM notes	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
5A6B400	CSM Separate disorder Jam (Front Skew) during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6B600	CSM Separate disorder Jam (Over Max Length) during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6B700	CSM Separate disorder Jam (Less Min Length) during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6B800	CSM Separate disorder Dark Jam during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5A6B900	CSM Low speed control 30 times over Error during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6BA00	CSM Over separation notes during collect lost notes during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6BE00	CSM Residue Notes in separation part after separation during Collect CSM notes	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5A6G100	Fail to move CSM BP to Stack Position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5A6G200	Fail to move CSM BP to Deposit Position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5A6G300	Fail to move CSM BP to Separation Position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5A6G500	Fail to move CSM BP to Note-Out Position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5A6G600	Fail to move CSM P-Roller to Home position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5A6G800	Fail to CSM return notes during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5A6G900	CSM GM601 Step out during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5A6GA00	Fail to move CSM BP to return note Position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5A6GB00	Fail to move CSM FP to Deposit Position during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5A6GF00	Fail to move CSM G-Roller to Homeposition during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status

Problem Code	Problem Description	Troubleshooting
5A6GG00	Fail to move both CSM P/G-Roller to Homeposition during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5A6M200	CSM Inner Shutter Open Error during Collect CSM notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5A6M300	CSM Inner Shutter Close Error during Collect CSM notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5A6M400	CSM Outer Shutter Open Error during Collect CSM notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5A6M500	CSM Outer Shutter Close Error during Collect CSM notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5A6M600	CSM Outer Shutter is Opened during Collect CSM notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5A6M700	CSM Inner Shutter Open during Stack during Collect CSM notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5A6M800	CSM Stopper Home position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5A6M900	CSM Stopper Stack position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5A6MB00	CSM Bill Supporter Up position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5A6MC00	CSM Bill Supporter Down position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5A6P100	CSM PP Withdrawal(Stack) position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5A6P200	CSM PP Deposit position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6P300	CSM PP Separation position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6P400	CSM PP collect lost notes position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6P500	CSM PP Note-out position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6P600	CSM PP Note-arrange position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6P800	CSM PP Control Stack Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6P900	CSM PP Return note position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6PD00	CSM PP Check semi-note Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5A6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Collect CSM notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting

5A8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Collect CSM notes	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5A8HB01	MR Sensor Level Error during Collect CSM notes	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5A8HC02	UV_01 Sensor Level Error during Collect CSM notes	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5A8HF03	CIS Shading data loading Fail during Collect CSM notes	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5A8HF04	Detection DB Table loading Fail during Collect CSM notes	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF05	BC FPGA Data checksum Fail during Collect CSM notes	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5A8HF06	BC FPGA Configuration Fail during Collect CSM notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5A8HF07	BC FPGA Header Information Loading Fail during Collect CSM notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5A8HF08	BC FPGA Initialize Fail during Collect CSM notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5A8HF09	BC FPGA VERSION Fail during Collect CSM notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5A8HF11	Detection DB #01 loading Fail during Collect CSM notes	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF12	Detection DB #02 loading Fail during Collect CSM notes	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF13	Detection DB #03 loading Fail during Collect CSM notes	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5A8HF14	Detection DB #04 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF15	Detection DB #05 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF16	Detection DB #06 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF17	Detection DB #07 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF18	Detection DB #08 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF19	Detection DB #09 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HF20	Detection DB #10 loading Fail during Collect CSM notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5A8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Collect CSM notes	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Collect CSM notes	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG03	BC Transaction Ready Fail When Receive BC READY Command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5A8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Collect CSM notes	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Collect CSM notes	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Collect CSM notes	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG07	Receive BC Unknown Command during Collect CSM notes	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5A8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Collect CSM notes	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Collect CSM notes	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Collect CSM notes	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5A8HG11	No Nation Code When Receive BC READY Command during Collect CSM notes	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Collect CSM notes	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5A8HG20	Fail to Initialize CIS When Receive BC READY Command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5A8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5A8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5A8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5A8HG24	ENCODER Mode Set Error When Receive BC READY Command during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5A8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Collect CSM notes	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Collect CSM notes	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Collect CSM notes	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Collect CSM notes	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Collect CSM notes	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Collect CSM notes	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Collect CSM notes	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5A8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Collect CSM notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Collect CSM notes	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HG4A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Collect CSM notes	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG4B	Over The Number of BC MODE SET Back Codes (Over 15) during Collect CSM notes	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Collect CSM notes	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Collect CSM notes	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Collect CSM notes	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Collect CSM notes	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Collect CSM notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Collect CSM notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG46	Bill Number Error When Receive Check No Write Command during Collect CSM notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Collect CSM notes	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Collect CSM notes	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Collect CSM notes	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5A8HH01	Fail to Delete NAND FLASH during Collect CSM notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5A8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Collect CSM notes	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5A8HH03	Fail to Download Detection DB during Collect CSM notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5A8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Collect CSM notes	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5A8HH05	Detection DB Download File Check Error during Collect CSM notes	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5A8HH06	Detection DB Download File Size Error during Collect CSM notes	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5A8HH07	DB Table Save Error After Download Detection DB during Collect CSM notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5A8HH08	Over Detection DB Download (Over 10) during Collect CSM notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5A8HH09	Detection DB Header Information Error during Collect CSM notes	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5A8HH10	EP Download Fail during Collect CSM notes	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5A8HH11	EP Downlaod Check Error during Collect CSM notes	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5A8HH12	EP Download File Size Error during Collect CSM notes	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5A8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Collect CSM notes	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5A8HH14	BC FPGA Download Fail during Collect CSM notes	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5A8HH15	Header Information Save Error After BC FPGA Download during Collect CSM notes	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5A8HH16	Not Provide BC FPGA Download during Collect CSM notes	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5A8HH17	EEPROM READ/WRITE Error during Collect CSM notes	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5A8HH18	Receive Unit Serial Number Undefined Option during Collect CSM notes	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5A8HH19	Receive USB Undefined Command during Collect CSM notes	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5A8HH20	No BC Process Note When Receive Image Upload Command during Collect CSM notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5A8HH21	FC1 Set Error When Receive Image Upload Command during Collect CSM notes	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH22	BC is Processing Note When Receive Image Upload Command during Collect CSM notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH23	FC2 Set Error When Receive Image Upload Command during Collect CSM notes	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH24	Not Provide Total Image Upload Function during Collect CSM notes	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5A8HH25	Not Provide Note Number Detection Image Upload Function during Collect CSM notes	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH26	FC2 Set Error When Receive Image Information Upload Command during Collect CSM notes	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Collect CSM notes	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Collect CSM notes	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Collect CSM notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH3A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Collect CSM notes	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH3B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Collect CSM notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH3C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Collect CSM notes	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH3D	Not Provide Replenishment/Collect Cash Image Upload Function during Collect CSM notes	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HH3E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Collect CSM notes	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5A8HI01	RecogTask Messeage Timeout Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5A8HI02	ScanTask Messeage Timeout Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5A8HI03	UartTask Messeage Timeout Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5A8HI04	BcUsbTask Messeage Timeout Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5A8HJ01	Algorithm Initialize Fail during Collect CSM notes	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HJ02	Algorithm Ready Fail during Collect CSM notes	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HJ03	Algorithm Information Set Error during Collect CSM notes	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5A8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Collect CSM notes	1. Retry the operation
5A8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Collect CSM notes	1. Check the number of CST Setting notes info
5A8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Collect CSM notes	1. Check Withdrawal notes setting
5A8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Collect CSM notes	1. Check Withdrawal notes info
5A8HS01	FPGA Write Data Error When Initialize Scan Driver during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS05	Not Process Shading When Initialize Scan Driver during Collect CSM notes	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5A8HS08	Fail to Set DAC When Initialize Scan Driver during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS11	FPGA Write Data Error When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5A8HS13	Fail to Set CIS Led On Value When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS14	Fail to Set Source of Scan Ligh When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS15	Not Process Shading When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS17	Fail to Set AFE Chip When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS18	Fail to Set DAC When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS19	MR/UV/DD Sampling Start Error When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS2A	Fail to Set 2-Notes DAC When BC Ready during Collect CSM notes	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5A8HS2B	2-Notes to 1-Note Adjust Information Error When BC Ready during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS28	Fail to Set DAC When Stop BC during Collect CSM notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5A8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Collect CSM notes	1. Check whether double notes sensor is contaminant or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5A8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Collect CSM notes	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5A8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Collect CSM notes	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5A8HS33	Over Target Gap When Process CIS Shading – Use in Plant during Collect CSM notes	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5A8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Collect CSM notes	1. Retry the operation2. Change BC
5A8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Collect CSM notes	1. Retry the operation2. Change BC
5A8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Collect CSM notes	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5A8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Collect CSM notes	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5A8HS38	Max Ontime Ove When Process CIS Shadngr – Use in Plant during Collect CSM notes	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC

Problem Code	Problem Description	Troubleshooting
5A8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Collect CSM notes	1. Retry the operation2. Change BC
5A8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Collect CSM notes	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5A8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Collect CSM notes	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5A8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Collect CSM notes	1. Retry the operation2. Change BC
5A8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8S100	BCU response MI error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8S200	BCU response BCC error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8S300	BCU response Sub MI error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8S400	BCU response Parameter error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5A8S900	BCU response Timeout Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AA2100	Error occurred by notes remained in GS801 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2200	Error occurred by notes remained in GS002 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5AA2300	Error occurred by notes remained in GS003 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2400	Error occurred by notes remained in GS004 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2500	Error occurred by notes remained in GS005 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2600	Error occurred by notes remained in GS006 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2700	Error occurred by notes remained in GS014 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2800	Error occurred by notes remained in GS018 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2900	Error occurred by notes remained in GS020 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2A00	Error occurred by notes remained in GS021 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2E00	Error occurred by notes remained in GS001 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5AA2H00	Error occurred by notes remained in GS618 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2J00	Error occurred by notes remained in GS619 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2K00	Error occurred by notes remained in GS701,702 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2M00	Error occurred by notes remained in GSA01 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2N00	Error occurred by notes remained in GSA02 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2P00	Error occurred by notes remained in GSA03 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2Q00	Error occurred by notes remained in GSD01 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AA2W00	Error occurred by notes remained in GS802 during Collect CSM notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5AAA100	UTC open Error before operation Collect CSM notes	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5AAA200	TSK open Error before operation Collect CSM notes	1. Open the upper unit. 2. Check the TSK open and close
5AAA300	BMU Inter Lock Error before operation Collect CSM notes	1. Check BMU open and close
5AAA400	BMU open Error before operation Collect CSM notes	1. Check BMU open and close
5AAA500	Replenishment CST open Error before operation Collect CSM notes	1. Check the Transit CST installation
5AAA600	CSM open Error before operation Collect CSM notes	1. Open the upper unit. 2. Check CSM Open/Close

Problem Code	Problem Description	Troubleshooting
5AAA800	BMD Inter Lock Error before operation Collect CSM notes	1. Open the lower unit. 2. Check the BMD open and close
5AAA900	BMD open Error before operation Collect CSM notes	1. Open the lower unit. 2. Check the BMD open and close
5AAAA00	BC Open Error before operation Collect CSM notes	1. Open the upper unit. 2. Check BC Open/Close
5AAAB00	RC Full Error before operation Collect CSM notes	1. Open the lower unit. 2. Check RC Full and remove notes
5AAC00	RJC Full Error before operation Collect CSM notes	1. Open the upper unit. 2. Check RJC Full and remove notes
5AAD00	UTC Full Error before operation Collect CSM notes	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5AAAE00	RTC Full Error before operation Collect CSM notes	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5AAAF00	RC Empty Error before operation Collect CSM notes	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5AAAG00	Suspected note RC open Error before operation Collect CSM notes	1. Open the lower unit. 2. Check the RC removal and reinstall
5AAAH00	Status of BMU loading in the BMU Test Mode before the operation during Collect CSM notes	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5AAAK00	Set collect lost note cassette to UTC in Not use RTC mode or Set collect lost note cassette to UTC in BRM58, BRM59 During Collect CSM notes	1. Check the Status of Cassette setting2. Initialize
5AAAL00	Status of UTC loading in the Test Mode before the operation during Collect CSM notes.	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5AAE100	Received operation command without Initial Info Set during Collect CSM notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AAE200	Status on not operation reception command during Collect CSM notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AAE300	Received operation command without System Info Read during Collect CSM notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AAE400	Transaction was executed without Initializing after power on during Collect CSM notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AAEE00	RBU RS485 communication sequence disorder during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AAEF00	RBU RS485 connection line disorder during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AAEL00	RBU communication was not ready after power on during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AAH600	Failure to check clearing NVRAM during Collect CSM notes	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5AAHF00	Transaction count exists but GS801A sensor no change during Collect CSM notes	1. Check GS801A2. Operate to initialize BRM(Recovery)
5AAHG00	Transaction count exists but GS801B sensor no change during Collect CSM notes	1. Check GS801B2. Operate to initialize BRM(Recovery)
5AAHH00	Transaction count exists but GS802A sensor no change during Collect CSM notes	1. Check GS802A2. Operate to initialize BRM(Recovery)
5AAHJ00	Transaction count exists but GS802B sensor no change during Collect CSM notes	1. Check GS802B2. Operate to initialize BRM(Recovery)
5AAR100	Message timeout error during operation ready during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AAR200	Message timeout error during transaction operation during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AAR300	Message timeout error during error postprocessing during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AAR800	RBU/BC sensor auto dimming response message timeout error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AARC00	BC response message timeout error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AARJ00	Message timeout error during Stop Ready during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AASG00	Stack CST Set Error during Collect CSM Notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ABR000	RBU Response Timeout during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ABR700	RBU Response Message Timeout during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ABS100	RBU RS-232 Seq Num Echo Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ABS200	RBU RS-232 MI Echo Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ABSS00	RBU Auto Calibration Command Parameter Error during Collect CSM notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ACJ100	RC6 RJC Full during Collect CSM notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5ACJ200	RC6 RC No Residue during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
5ACJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
5ACR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ACR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ACR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ACR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AEJ200	CST No Residue during Collect CSM notes	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5AEJ300	CST Full,Bottom no detect before move RC PP to stack position during Collect CSM notes	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5AER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5AFJ200	RC7 No Residue during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5AFJ300	Full,Bottom no detect before move RC7 PP to stack position during Collect CSM notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
5AUS100	USB Bulk Sequence Error during Retract CSM.	1. Restart over AP-SP
5AUS300	USB Bulk Received Length Error during Retract CSM.	1. Reboot the system

Problem Code	Problem Description	Troubleshooting
5AUS400	Message transmission Error from USB to Main Task during Retract CSM.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5AUS500	Message reception Error from MainTask to USB during Retract CSM.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5AUSCMD	Bulk command data check error during Collect CSM notes. (USB communication failure)	1. Restart over AP-SP
5AUSCRC	CRC data check error during Collect CSM notes. (USB communication failure)	1. Restart over AP-SP
5AUSLEN	Bulk length error during Collect CSM notes. (USB communication failure)	1. Restart over AP-SP
5B00100	GS801 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5B00200	GS002 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00300	GS003 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00400	GS004 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00500	GS005 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00600	GS006 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00700	GS014 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B00800	GS018 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00900	GS020 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00A00	GS021 Light Jam error during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00C00	GS030 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00E00	GS001 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00H00	GS618 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00J00	GS619 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00M00	GSA01 Light Jam error during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00N00	GSA02 Light Jam error during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00P00	GSA03 Light Jam error during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B00Q00	GSD01 Light Jam error during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B00W00	GS802 Light Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01100	GS801 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5B01200	GS002 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01300	GS003 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01400	GS004 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01500	GS005 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01600	GS006 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01700	GS014 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B01800	GS018 Dark Jam error during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting

Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B02W00	Error occurred by notes remained in GS802 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B05100	GS801 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5B05200	GS002 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05300	GS003 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05400	GS004 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05500	GS005 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05600	GS006 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05700	GS014 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05800	GS018 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05900	GS020 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05A00	GS021 Path error on transport path during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B05C00	GS030 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05E00	GS001 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05H00	GS618 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05J00	GS619 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05M00	GSA01 Path error on transport path during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05N00	GSA02 Path error on transport path during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05P00	GSA03 Path error on transport path during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05Q00	GSD01 Path error on transport path during Collect TSK notes	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5B05W00	GS802 Path error on transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B06100	GS801 Path error on sensor except for transport path during Collect TSK notes	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B06200	GS002 Path error on sensor except for transport path during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. 5B0F100	GM001 motor doesn't operate at a constant speed when the motor works during Collect TSK notes	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5B0F200	GM002 motor doesn't operate at a constant speed when the motor works during Collect TSK notes	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5B0F400	GM004 motor doesn't operate at a constant speed when the motor works during Collect TSK notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5B0F600	GM006 motor doesn't operate at a constant speed when the motor works during Collect TSK notes	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5B0F700	GM007 motor doesn't operate at a constant speed when the motor works during Collect TSK notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5B0F900	GM009 motor doesn't operate at a constant speed when the motor works during Collect TSK notes	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5B0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect TSK notes	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5B0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect TSK notes	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5B0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect TSK notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5B0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect TSK notes	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
5B0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect TSK notes	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5B0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect TSK notes	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
5B0G100	Failure to 3Way Gate 0 degree mode conversion during Collect TSK notes	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5B0G200	Failure to 3Way Gate 120 degree mode conversion during Collect TSK notes	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5B0GB00	Time Out to 3Way Gate Mode conversion during Collect TSK notes	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5B0GC00	Failure to RTRJ Gate RJC Mode conversion during Collect TSK notes	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5B0GD00	Failure to RTRJ Gate RTC Mode conversion during Collect TSK notes	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5B0K100	Duplication S/N Error during Collect TSK notes	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5B0N400	Jam Message Receive Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B0NA00	Checksum error when notes separate from TSK during Collect TSK notes	1. Operate to initialize BRM(Recovery)
5B0NC00	length different from separation part to stack part after transport during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B0NK00	BC recognized notes have no cassette to be stacked during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B0Q100	UTC detachment Error during Collect TSK notes	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5B0Q200	TSK detachment Error during Collect TSK notes	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5B0Q300	BMU Inter Lock Error during Collect TSK notes	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5B0Q400	BMU detackment Error during Collect TSK notes	1. Check Load/Removal of the upper unit

Problem Code	Problem Description	Troubleshooting
5B0Q500	Replenishment CST detachment Error during Collect TSK notes	1. Check the safe door open
5B0Q600	CSM detackment Error during Collect TSK notes	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
5B0Q800	BMD Inter Lock Error during Collect TSK notes	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5B0Q900	BMD detachment Error during Collect TSK notes	1. Check the lower Unit load/removal
5B0QA00	BC Open Error during Collect TSK notes	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5B0QS00	Receive Error Stop CMD during Collect TSK notes	1. Initialize
5B0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B0SZ00	Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B10100	RC1 GS101 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B10200	RC1 GS102 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B10500	RC1 GS105 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5B10Z00	RC1 All Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B11100	RC1 GS101 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B11200	RC1 GS102 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B11500	RC1 GS105 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B11Z00	All RC1 Sensor Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B12100	Error occurred by notes remained in RC1 GS101 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B12200	Error occurred by notes remained in RC1 GS102 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B12500	Error occurred by notes remained in RC1 GS105 during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5B12Z00	Error occurred by notes remained in All RC1 Sensor during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B13100	RC1 GS101 Sensor auto calibration error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B13200	RC1 GS102 Sensor auto calibration error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B13500	RC1 GS105 Sensor auto calibration error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B13Z00	All RC1 Sensor auto calibration error during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B14100	RC1 GS101 Extern lights check error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B14200	RC1 GS102 Extern lights check error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B14500	RC1 GS105 Extern lights check error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B14Z00	All RC1 Sensor Extern lights check error during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B15100	RC1 GS101 Path error on transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B15200	RC1 GS102 Path error on transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B15500	RC1 GS105 Path error on transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B15Z00	All RC1 Sensor Path error on transport path during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B16100	RC1 GS101 Path error on sensor except for transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B16200	RC1 GS102 Path error on sensor except for transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B16500	RC1 GS105 Path error on sensor except for transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B16Z00	RC1 All Path error on sensor except for transport path during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B17100	Error occurred by the notes disorder in RC1 GS101 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B17200	Error occurred by the notes disorder in RC1 GS102 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B17500	Error occurred by the notes disorder in RC1 GS105 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B17Z00	Error occurred by the notes disorder in RC1 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B1G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B1G200	RC1 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5B1G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5B1G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1G600	RC1 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5B1GA00	RC1 Solenoid Echo error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
5B1GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5B1GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B1GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5B1GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5B1GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1GK00	RC1 Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B1GQ00	RJC Press and Stack position fail during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5B1GR00	RJC Stack position fail during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5B1GS00	RC1 RJC Press position fail during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5B1GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.

Problem Code	Problem Description	Troubleshooting
5B1GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5B1GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Collect TSK notes	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5B1GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5B1GX00	RC1 GS101 detects notes during RJC intialize during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B1J100	RJC Full during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5B1J200	RC1 No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5B1J300	Full,Bottom no detect before move RC1 PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5B1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1RF00	RC1 Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1RP00	RC1 PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1S200	RC1 Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5B1S300	RC1 Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1SA00	RC1 Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B1SR00	RC1 Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B20100	RC2 GS201 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B20200	RC2 GS202 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B20500	RC2 GS205 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5B20Z00	RC2 All Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B21100	RC2 GS201 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B21200	RC2 GS202 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B21500	RC2 GS205 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B21Z00	RC2 All Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B22100	Error occurred by notes remained in RC2 GS201 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B22200	Error occurred by notes remained in RC2 GS202 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B22500	Error occurred by notes remained in RC2 GS205 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B22Z00	Error occurred by notes remained in RC2 All Sensor during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B23100	Sensor auto calibration error in RC2 GS201 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B23200	Sensor auto calibration error in RC2 GS202 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B23500	Sensor auto calibration error in RC2 GS205 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B23Z00	Sensor auto calibration error in RC2 All Sensor during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B24100	Extern lights check error in RC2 GS201 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B24200	Extern lights check error in RC2 GS202 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B24500	Extern lights check error in RC2 GS205 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B24Z00	Extern lights check error in RC2 All Sensor during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B25100	Path error on transport path in RC2 GS201 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B25200	Path error on transport path in RC2 GS202 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B25500	Path error on transport path in RC2 GS205 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B25Z00	Path error on transport path in RC2 All Sensor during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B26100	Path error on sensor except for transport path in RC2 GS201 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B26200	Path error on sensor except for transport path in RC2 GS202 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B26500	Path error on sensor except for transport path in RC2 GS205 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B26Z00	Path error on sensor except for transport path in RC2 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B27100	Error occurred by the notes disorder in RC2 GS201 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B27200	Error occurred by the notes disorder in RC2 GS202 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B27500	Error occurred by the notes disorder in RC2 GS205 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B27Z00	Error occurred by the notes disorder in RC2 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B2G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B2G200	RC2 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5B2G400	RC2 Failure to upword moving of PP during RC2 stack roller retreat movement during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
5B2G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2G600	RC2 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5B2GA00	RC2 Solenoid Echo error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5B2GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B2GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5B2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5B2GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5B2GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2GK00	RC2 Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B2J200	RC2 No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
5B2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5B2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2RF00	RC2 Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2RP00	RC2 PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2S200	RC2 Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5B2S300	RC2 Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2SA00	RC2 Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B2SR00	RC2 Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B30100	RC3 GS301 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B30200	RC3 GS302 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B30500	RC3 GS305 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5B30Z00	RC3 All Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B31100	RC3 GS301 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B31200	RC3 GS302 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B31500	RC3 GS305 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B31Z00	RC3 All Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B32100	Error occurred by notes remained in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B32200	Error occurred by notes remained in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B32500	Error occurred by notes remained in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B32Z00	Error occurred by notes remained in RC3 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B33100	Sensor auto calibration error in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B33200	Sensor auto calibration error in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B33500	Sensor auto calibration error in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B33Z00	Sensor auto calibration error in RC3 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B34100	Extern lights check error in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B34200	Extern lights check error in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B34500	Extern lights check error in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B34Z00	Extern lights check error in RC3 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B35100	Path error on transport path in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B35200	Path error on transport path in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B35500	Path error on transport path in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B35Z00	Path error on transport path in RC3 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B36100	Path error on sensor except for transport path in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B36200	Path error on sensor except for transport path in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B36500	Path error on sensor except for transport path in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B36Z00	Path error on sensor except for transport path in RC3 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B37100	Error occurred by the notes disorder in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B37200	Error occurred by the notes disorder in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B37500	Error occurred by the notes disorder in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B37Z00	Error occurred by the notes disorder in RC3 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B3G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B3G200	RC3 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5B3G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
5B3G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3G600	RC3 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
5B3GA00	RC3 RC Solenoid Echo error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
5B3GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B3GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5B3GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5B3GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5B3GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B3J200	RC3 No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
5B3J300	RC3 Full,Bottom no detect before move RC PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
5B3L100	Remaining notes stack process error in RC3 GS301 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B3L200	Remaining notes stack process error in RC3 GS302 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B3L500	Remaining notes stack process error in RC3 GS305 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5B3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3RF00	RC3 Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3RP00	RC3 PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3S200	RC3 Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3S300	RC3 RC Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3SA00	RC3 RC Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B3SR00	RC3 Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B40100	RC4 GS401 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B40200	RC4 GS402 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B40500	RC4 GS405 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5B40Z00	RC4 All Sensor Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B41100	RC4 GS401 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B41200	RC4 GS402 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B41500	RC4 GS405 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B41Z00	RC4 All Sensor Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B42100	Error occurred by notes remained in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B42200	Error occurred by notes remained in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B42500	Error occurred by notes remained in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B42Z00	Error occurred by notes remained in RC4 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B43100	Sensor auto calibration error in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B43200	Sensor auto calibration error in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B43500	Sensor auto calibration error in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B43Z00	Sensor auto calibration error in RC4 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B44100	Extern lights check error in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B44200	Extern lights check error in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B44500	Extern lights check error in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B44Z00	Extern lights check error in RC4 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5B45100	Path error on transport path in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B45200	Path error on transport path in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B45500	Path error on transport path in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B45Z00	Path error on transport path in RC4 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B46100	Path error on sensor except for transport path in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B46200	Path error on sensor except for transport path in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B46500	Path error on sensor except for transport path in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B46Z00	Path error on sensor except for transport path in RC4 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B47100	Error occurred by the notes disorder in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B47200	Error occurred by the notes disorder in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B47500	Error occurred by the notes disorder in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B47Z00	Error occurred by the notes disorder in RC4 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5B4G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B4G200	RC4 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5B4G400	RC4 Failure to upward moving of PP during RC4 stack roller retreat movement during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5B4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4G600	RC4 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5B4GA00	RC4 RC Solenoid Echo error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
5B4GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B4GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5B4GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5B4GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B4J200	RC4 No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes
5B4J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
5B4L100	Remaining notes stack process error in RC4 GS401 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B4L200	Remaining notes stack process error in RC4 GS402 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B4L500	Remaining notes stack process error in RC4 GS405 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B57200	Error occurred by the notes disorder in RC5 GS502 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B57500	Error occurred by the notes disorder in RC5 GS505 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B57Z00	Error occurred by the notes disorder in RC5 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5B5G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B5G200	RC5 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
5B5G400	RC5 Failure to upward moving of PP during RC5 stack roller retreat movement during Collect TSK notes	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.
5B5G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5G600	RC5 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
5B5GA00	RC5 Solenoid Echo error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
5B5GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5B5GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B5GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5B5GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5B5GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5GK00	RC5 Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5B5J200	RC5 No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E).5. Fill up the Notes if there are no notes
5B5J300	RC5 Full,Bottom no detect before move RC PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.

Problem Code	Problem Description	Troubleshooting
5B5L100	Remaining notes stack process error in RC5 GS501 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B5L200	Remaining notes stack process error in RC5 GS502 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B5L500	Remaining notes stack process error in RC5 GS505 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5B5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5RF00	RC5 Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5RP00	RC5 PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5S200	RC5 Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5S300	RC5 Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5SA00	RC5 Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B5SR00	RC5 Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B61H00	GS618/619 Dark Jam error during Retract TSK.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5B62100	CSM Residue Error during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5B62300	CSM insert notes excess Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5B62500	CSM notes disappear Error during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5B62600	CSM notes appear Error during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5B62Z00	CSM Residue Error during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5B6G100	Fail to move CSM BP to Stack Position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5B6G200	Fail to move CSM BP to Deposit Position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5B6G300	Fail to move CSM BP to Separation Position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5B6G500	Fail to move CSM BP to Note-Out Position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5B6G600	Fail to move CSM P-Roller to Home position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5B6G800	Fail to CSM return notes during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5B6G900	CSM GM601 Step out during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5B6GA00	Fail to move CSM BP to return note Position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
5B6GB00	Fail to move CSM FP to Deposit Position during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5B6GF00	Fail to move CSM G-Roller to Homeposition during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5B6GG00	Fail to move both CSM P/G-Roller to Homeposition during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5B6M200	CSM Inner Shutter Open Error during Collect TSK notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5B6M300	CSM Inner Shutter Close Error during Collect TSK notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5B6M400	CSM Outer Shutter Open Error during Collect TSK notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5B6M500	CSM Outer Shutter Close Error during Collect TSK notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5B6M600	CSM Outer Shutter is Opened during Collect TSK notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5B6M700	CSM Inner Shutter Open during Stack during Collect TSK notes	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5B6M800	CSM Stopper Home position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5B6M900	CSM Stopper Stack position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5B6MB00	CSM Bill Supporter Up position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize

Problem Code	Problem Description	Troubleshooting
5B6MC00	CSM Bill Supporter Down position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5B6P100	CSM PP Withdrawal(Stack) position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P200	CSM PP Deposit position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P300	CSM PP Separation position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P400	CSM PP collect lost notes position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P500	CSM PP Note-out position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P600	CSM PP Note-arrange position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P800	CSM PP Control Stack Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6P900	CSM PP Return note position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5B6PD00	CSM PP Check semi-note Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Collect TSK notes	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5B6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RB00	CSM BP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RF00	CSM Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RL00	CSM Lift response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RP00	CSM PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RR00	CSM Bill supporter response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RS00	CSM Inner Shutter response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6RT00	CSM Stopper response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B6SA00	CSM Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5B6SR00	CSM Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B70100	TSK GS701 Light Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B70200	TSK GS702 Light Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B70300	TSK GS703,4 Light Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B70900	GS020 Light Jam error during Collect TSK notes!(TSK motor Step out)	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5B70Z00	TSK All Light Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B71100	TSK GS701 Dark Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B71200	TSK GS702 Dark Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B71300	TSK GS703,4 Dark Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B71Z00	TSK All Dark Jam during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B72100	Error occurred by notes remained in TSK GS701 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B72200	Error occurred by notes remained in TSK GS702 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B72300	Error occurred by notes remained in TSK GS703,4 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B72Z00	Error occurred by notes remained in TSK All Sensor during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B77100	Error occurred by the notes disorder in TSK GS701 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5B77200	Error occurred by the notes disorder in TSK GS702 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B77300	Error occurred by the notes disorder in TSK GS703,4 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B77Z00	Error occurred by the notes disorder in TSK All during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B7B200	Note detected in TSK Entry After Separate Ready during Collect TSK notes	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5B7B300	TSK GM701 motor status change failed(Timeout exceeded) during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7C100	TSK Miss-pickup during separation during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber
5B7C200	TSK Last note unclear during separation during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
5B7C300	TSK Last note No front detect during separataion during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
