5B7C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Collect TSK notes	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5B7C900	TSK Low speed control 30 times over Error during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5B7CA00	TSK Incounted note is not Outcounted for 500ms during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5B7F100	TSK GM701 stepout during separation during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
5B7F300	TSK GM701 F-Roller Homeposition fail during Collect TSK notes	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
5B7G100	GM701 Return notes fail during Collect TSK notes	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
5B7J100	TSK Full during Collect TSK notes	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
5B7J200	TSK Empty during ready separation during Collect TSK notes	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5B7L100	Remaining notes stack process error in TSK GS701 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B7L200	Remaining notes stack process error in TSK GS702 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B7L300	Remaining notes stack process error in TSK GS703,4 during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B7LZ00	Remaining notes stack process error in TSK All during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5B7M100	TSK Stopper Home position for intialize fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5B7M200	TSK Stopper Stack position for intialize fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5B7M300	TSK Stopper Return note position for intialize fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5B7M400	TSK Stopper Lock FP Fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5B7M500	TSK Stopper Unlock FP Fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5B7P100	FP Sensor detect Dark Fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5B7P200	FP Sensor detect Light Fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5B7P300	PP Press position fail during Collect TSK notes	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob

Problem Code	Problem Description	Troubleshooting
5B7Q700	TSK Door Open during operation in Collect TSK notes	1. Close the door of TSK(5)
5B7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7RF00	TSK Feed Motor response timeout in Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7RP00	TSK PP response timeout in Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7RT00	TSK Stopper response timeout in Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7S200	TSK Receive undefined command in Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B7SR00	TSK Sub Task for Wait Setting Error in Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8HA01	GS801A Sensor Error during Collect TSK notes	1. Check GS801A2. Operate to initialize BRM(Recovery)
5B8HA02	GS801B Sensor Error during Collect TSK notes	1. Check GS801B2. Operate to initialize BRM(Recovery)
5B8HA03	GS801A, GS801B Sensor Error during Collect TSK notes	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5B8HA04	GS802A Sensor Error during Collect TSK notes	1. Check GS802A2. Operate to initialize BRM(Recovery)
5B8HA05	GS801A, GS802A Sensor Error during Collect TSK notes	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5B8HA06	GS801B, GS802A Sensor Error during Collect TSK notes	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5B8HA07	GS801A, GS801B, GS802A Sensor Error during Collect TSK notes	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5B8HA08	GS802B Sensor Error during Collect TSK notes	1. Check GS802B2. Operate to initialize BRM(Recovery)
5B8HA09	GS801A, GS802B Sensor Error during Collect TSK notes	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5B8HA10	GS801B, GS802B Sensor Error during Collect TSK notes	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5B8HA11	GS801A, GS801B, GS802B Sensor Error during Collect TSK notes	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5B8HA12	GS802A, GS802B Sensor Error during Collect TSK notes	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5B8HA13	GS801A, GS802A, GS802B Sensor Error during Collect TSK notes	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5B8HA14	GS801B, GS802A, GS802B Sensor Error during Collect TSK notes	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5B8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Collect TSK notes	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5B8HB01	MR Sensor Level Error during Collect TSK notes	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5B8HC02	UV_01 Sensor Level Error during Collect TSK notes	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5B8HF03	CIS Shading data loading Fail during Collect TSK notes	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5B8HF04	Detection DB Table loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF05	BC FPGA Data checksum Fail during Collect TSK notes	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5B8HF06	BC FPGA Configuration Fail during Collect TSK notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5B8HF07	BC FPGA Header Information Loading Fail during Collect TSK notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5B8HF08	BC FPGA Initialize Fail during Collect TSK notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5B8HF09	BC FPGA VERSION Fail during Collect TSK notes	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5B8HF11	Detection DB #01 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF12	Detection DB #02 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF13	Detection DB #03 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF14	Detection DB #04 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF15	Detection DB #05 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF16	Detection DB #06 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF17	Detection DB #07 loading Fail during Collect TSK notes	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5B8HF18	Detection DB #08 loading Fail during Collect TSK notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF19	Detection DB #09 loading Fail during Collect TSK notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HF20	Detection DB #10 loading Fail during Collect TSK notes	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5B8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Collect TSK notes	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Collect TSK notes	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG03	BC Transaction Ready Fail When Receive BC READY Command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5B8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Collect TSK notes	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Collect TSK notes	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Collect TSK notes	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG07	Receive BC Unknown Command during Collect TSK notes	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5B8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Collect TSK notes	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Collect TSK notes	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Collect TSK notes	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5B8HG11	No Nation Code When Receive BC READY Command during Collect TSK notes	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Collect TSK notes	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5B8HG20	Fail to Initialize CIS When Receive BC READY Command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
5B8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5B8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5B8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5B8HG24	ENCODER Mode Set Error When Receive BC READY Command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5B8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Collect TSK notes	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Collect TSK notes	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Collect TSK notes	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Collect TSK notes	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Collect TSK notes	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Collect TSK notes	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Collect TSK notes	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Collect TSK notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Collect TSK notes	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Collect TSK notes	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5B8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Collect TSK notes	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Collect TSK notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Collect TSK notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Collect TSK notes	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Collect TSK notes	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Collect TSK notes	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Collect TSK notes	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG46	Bill Number Error When Receive Check No Write Command during Collect TSK notes	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Collect TSK notes	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Collect TSK notes	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Collect TSK notes	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HH01	Fail to Delete NAND FLASH during Collect TSK notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5B8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Collect TSK notes	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5B8HH03	Fail to Download Detection DB during Collect TSK notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5B8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Collect TSK notes	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5B8HH05	Detection DB Download File Check Error during Collect TSK notes	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5B8HH06	Detection DB Download File Size Error during Collect TSK notes	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5B8HH07	DB Table Save Error After Download Detection DB during Collect TSK notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5B8HH08	Over Detection DB Download (Over 10) during Collect TSK notes	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5B8HH09	Detection DB Header Information Error during Collect TSK notes	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5B8HH10	EP Download Fail during Collect TSK notes	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5B8HH11	EP Download Check Error during Collect TSK notes	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5B8HH12	EP Download File Size Error during Collect TSK notes	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5B8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Collect TSK notes	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5B8HH14	BC FPGA Download Fail during Collect TSK notes	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5B8HH15	Header Information Save Error After BC FPGA Download during Collect TSK notes	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5B8HH16	Not Provide BC FPGA Download during Collect TSK notes	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5B8HH17	EEPROM READ/WRITE Error during Collect TSK notes	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5B8HH18	Receive Unit Serial Number Undefined Option during Collect TSK notes	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5B8HH19	Receive USB Undefined Command during Collect TSK notes	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5B8HH20	No BC Process Note When Receive Image Upload Command during Collect TSK notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH21	FC1 Set Error When Receive Image Upload Command during Collect TSK notes	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH22	BC is Processing Note When Receive Image Upload Command during Collect TSK notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH23	FC2 Set Error When Receive Image Upload Command during Collect TSK notes	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH24	Not Provide Total Image Upload Function during Collect TSK notes	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5B8HH25	Not Provide Note Number Detection Image Upload Function during Collect TSK notes	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH26	FC2 Set Error When Receive Image Information Upload Command during Collect TSK notes	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Collect TSK notes	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Collect TSK notes	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Collect TSK notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Collect TSK notes	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Collect TSK notes	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Collect TSK notes	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Collect TSK notes	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Collect TSK notes	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5B8HI01	RecogTask Messeage Timeout Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5B8HI02	ScanTask Messeage Timeout Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5B8HI03	UartTask Messeage Timeout Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5B8HI04	BcUsbTask Messeage Timeout Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5B8HJ01	Algorithm Initialize Fail during Collect TSK notes	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5B8HJ02	Algorithm Ready Fail during Collect TSK notes	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HJ03	Algorithm Information Set Error during Collect TSK notes	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5B8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Collect TSK notes	1. Retry the operation
5B8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Collect TSK notes	1. Check the number of CST Setting notes info
5B8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Collect TSK notes	1. Check Withdrawal notes setting
5B8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Collect TSK notes	1. Check Withdrawal notes info
5B8HS01	FPGA Write Data Error When Initialize Scan Driver during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS05	Not Process Shading When Initialize Scan Driver during Collect TSK notes	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5B8HS08	Fail to Set DAC When Initialize Scan Driver during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS11	FPGA Write Data Error When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS13	Fail to Set CIS Led On Value When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS14	Fail to Set Source of Scan Ligh When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS15	Not Process Shading When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS17	Fail to Set AFE Chip When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS18	Fail to Set DAC When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5B8HS19	MR/UV/DD Sampling Start Error When BC Ready during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS1A	Fail to Set 2-Notes DAC When BC Ready during Collect TSK notes	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5B8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Collect TSK notes	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5B8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS28	Fail to Set DAC When Stop BC during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Collect TSK notes	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5B8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Collect TSK notes	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5B8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Collect TSK notes	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5B8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Collect TSK notes	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5B8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Collect TSK notes	1. Retry the operation2. Change BC
5B8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Collect TSK notes	1. Retry the operation2. Change BC
5B8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Collect TSK notes	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5B8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Collect TSK notes	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5B8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Collect TSK notes	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5B8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Collect TSK notes	1. Retry the operation2. Change BC
5B8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Collect TSK notes	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5B8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Collect TSK notes	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5B8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Collect TSK notes	1. Retry the operation2. Change BC
5B8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5B8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8S100	BCU response MI error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8S200	BCU response BCC error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8S300	BCU response Sub MI error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8S400	BCU response Parameter error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5B8S900	BCU response Timeout Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BA2100	Error occurred by notes remained in GS801 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2200	Error occurred by notes remained in GS002 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2300	Error occurred by notes remained in GS003 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2400	Error occurred by notes remained in GS004 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2500	Error occurred by notes remained in GS005 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BA2600	Error occurred by notes remained in GS006 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2700	Error occurred by notes remained in GS014 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2800	Error occurred by notes remained in GS018 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2900	Error occurred by notes remained in GS020 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2A00	Error occurred by notes remained in GS021 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2E00	Error occurred by notes remained in GS001 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2H00	Error occurred by notes remained in GS618 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2J00	Error occurred by notes remained in GS619 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2K00	Error occurred by notes remained in GS701,702 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BA2M00	Error occurred by notes remained in GSA01 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2N00	Error occurred by notes remained in GSA02 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2P00	Error occurred by notes remained in GSA03 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2Q00	Error occurred by notes remained in GSD01 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BA2W00	Error occurred by notes remained in GS802 during Collect TSK notes	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5BAA100	UTC open Error before operation Collect TSK notes	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5BAA200	TSK open Error before operation Collect TSK notes	1. Open the upper unit. 2. Check the TSK open and close
5BAA300	BMU Inter Lock Error before operation Collect TSK notes	1. Check BMU open and close
5BAA400	BMU open Error before operation Collect TSK notes	1. Check BMU open and close
5BAA500	Replenishment CST open Error before operation Collect TSK notes	1. Check the Transit CST installation
5BAA600	CSM open Error before operation Collect TSK notes	1. Open the upper unit. 2. Check CSM Open/Close
5BAA800	BMD Inter Lock Error before operation Collect TSK notes	1. Open the lower unit. 2. Check the BMD open and close
5BAA900	BMD open Error before operation Collect TSK notes	1. Open the lower unit. 2. Check the BMD open and close
5BAAA00	BC Open Error before operation Collect TSK notes	1. Open the upper unit. 2. Check BC Open/Close
5BAAB00	RC Full Error before operation Collect TSK notes	1. Open the lower unit. 2. Check RC Full and remove notes
5BAAC00	RJC Full Error before operation Collect TSK notes	1. Open the upper unit. 2. Check RJC Full and remove notes
5BAAD00	UTC Full Error before operation Collect TSK notes	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC

Problem Code	Problem Description	Troubleshooting
5BAAE00	RTC Full Error before operation Collect TSK notes	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5BAAF00	RC Empty Error before operation Collect TSK notes	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5BAAG00	RC is not in use before operation Collect TSK notes	1. Open the lower unit. 2. Check the RC removal and reinstall
5BAAH00	Lost note RC open Error before operation Collect TSK notes	1. Open the lower unit. 2. Check the RC removal and reinstall
5BAAJ00	Collect TSK notes is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5BAAK00	Status of RTRJC loading in the Test Mode before the operation during Collect TSK notes.	1. Open the lower unit2. Open MID Transport(7)3. Check RT/RJC(8) installation condition
5BAAM00	Status of DPC loading in the Test Mode before the operation during Collect TSK notes.	1. Open the lower unit2. Open MID Transport(7)3. Check DPC(A) installation condition
5BAAN00	Status of RJC loading in the Test Mode before the operation during Collect TSK notes.	1. Open the lower unit2. Open MID Transport(7)3. Check RJC(8) installation condition
5BAE100	Received operation command without Initial Info Set during Collect TSK notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5BAE200	Status on not operation reception command during Collect TSK notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5BAE300	Received operation command without System Info Read during Collect TSK notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5BAE400	Transaction was executed without Initializing after power on during Collect TSK notes	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5BAEE00	RBU RS485 communication sequence disorder during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5BAEF00	RBU RS485 connection line disorder during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5BAEL00	RBU communication was not ready after power on during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5BAH600	Failure to check clearing NVRAM during Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BAHF00	Transaction count exists but GS801A sensor no change during Collect TSK notes	1. Check GS801A2. Operate to initialize BRM(Recovery)
5BAHG00	Transaction count exists but GS801B sensor no change during Collect TSK notes	1. Check GS801B2. Operate to initialize BRM(Recovery)
5BAHH00	Transaction count exists but GS802A sensor no change during Collect TSK notes	1. Check GS802A2. Operate to initialize BRM(Recovery)
5BAHJ00	Transaction count exists but GS802B sensor no change during Collect TSK notes	1. Check GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5BAN100	RC1 stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BAN200	RC2 stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BAN300	RC3stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BAN400	RC4 stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BAN500	RC5 stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BANE00	RC6 stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BANF00	RC7 stack counts is different with BC pass info of normal count in the Collect TSK notes	1. Operate to initialize BRM(Recovery)
5BAR100	Message timeout error during operation ready during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BAR200	Message timeout error during transation operation during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BAR300	Message timeout error during error postprocessing during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BAR800	RBU/BC sensor auto dimming response message timeout error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BARC00	BC response message timeout error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BARJ00	Message timeout error during Stop Ready during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BASG00	Stack CST Set Error(Stack CST is set to Transit CST on a device that does not support the front Transit or in a status of Transit CST removal) during Collect TSK Notes.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BASH00	Reject CST Set Error during Collect TSK Notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BASJ00	Stack CST Set Error during Collect TSK Notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BBH100	RC1 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5BBH200	RC2 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH300	RC3 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH400	RC4 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH500	RC5 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH600	RC6 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH700	RC1 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH800	RC2 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBH900	RC3 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBHA00	RC4 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBHB00	RC5 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBHC00	RC6 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBHD00	RC1 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBHE00	RC2 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBHF00	RC3 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBHG00	RC4 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBHH00	RC5 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBHJ00	RC6 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBHK00	BMD Open Error During EEPROM Read/Write during Collect TSK notes	1. Check the lower Unit load/removal

Problem Code	Problem Description	Troubleshooting
5BBHU00	BMD EEPROM Read Error during Collect TSK notes	1. Replace RBU B/D
5BBHV00	BMD EEPROM Write Error during Collect TSK notes	1. Replace RBU B/D
5BBHW00	BMD EEPROM Verify Error during Collect TSK notes	1. Replace RBU B/D
5BBHX00	RC7 EEPROM Read Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBHY00	RC7 EEPROM Write Error during Collect TSK notes	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5BBHZ00	RC7 EEPROM Verify Error during Collect TSK notes	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5BBR000	RBU Response Timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BBR700	RBU Response Message Timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BBS100	RBU RS-232 Seq Num Echo Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BBS200	RBU RS-232 MI Echo Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BBSS00	RBU Auto Calibration Command Parameter Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BC0100	RC6 GSC01 Light Jam during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC0200	RC6 GSC02 Light Jam during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC0500	RC6 GSC05 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(8)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5BC0Z00	RC6 All Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC1100	RC6 GSC01 Dark Jam during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BC1200	RC6 GSC02 Dark Jam during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC1500	RC6 GSC05 Dark Jam during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC1Z00	RC6 All Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC2100	Error occurred by notes remained in RC6 GSC01 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC2200	Error occurred by notes remained in RC6 GSC02 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC2500	Error occurred by notes remained in RC6 GSC05 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC2Z00	Error occurred by notes remained in RC6 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC3100	Sensor auto calibration error in RC6 GSC01 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC3200	Sensor auto calibration error in RC6 GSC02 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC3500	Sensor auto calibration error in RC6 GSC05 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC3Z00	Sensor auto calibration error in RC6 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC4100	Extern lights check error in RC6 GSC01 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BC4200	Extern lights check error in RC6 GSC02 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC4500	Extern lights check error in RC6 GSC05 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC4Z00	Extern lights check error in RC6 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC5100	Path error on transport path in RC6 GSC01 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC5200	Path error on transport path in RC6 GSC02 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC5500	Path error on transport path in RC6 GSC05 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC5Z00	Path error on transport path in RC6 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC6100	Path error on sensor except for transport path in RC6 GSC01 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC6200	Path error on sensor except for transport path in RC6 GSC02 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC6500	Path error on sensor except for transport path in RC6 GSC05 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC6Z00	Path error on sensor except for transport path in RC6 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BC7100	Error occurred by the notes disorder in RC6 GSC01 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BC7200	Error occurred by the notes disorder in RC6 GSC02 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC7500	Error occurred by the notes disorder in RC6 GSC05 during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BC7Z00	Error occurred by the notes disorder in RC6 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BCG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BCG200	RC6 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5BCG400	RC6 Failure to upword moving of PP during RC6 stack roller retreat movement during Collect TSK notes	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5BCG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCG600	RC6 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
5BCGA00	RC6 RC Solenoid Echo error during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
5BCGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5BCGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BCGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5BCGF00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5BCGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BCGQ00	RJC Press and Stack position fail during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5BCGR00	RJC Stack position fail during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5BCGS00	RC6 RJC Press position fail during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
5BCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5BCGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5BCGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5BCGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Collect TSK notes	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5BCGX00	RC6 GSC01 detects notes during RJC intialize during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BCJ100	RC6 RJC Full during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5BCJ200	RC6 RC No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
5BCJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
5BCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCRF00	RC6 Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCRP00	RC6 PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5BCS200	RC6 Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCS300	RC6 Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCSA00	RC6 Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BCSR00	RC6 Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BE0100	CST GS901 Light Jam during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE0200	CST GS902 Light Jam during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE0500	CST GS905 Light Jam during Collect TSK notes	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
5BE0Z00	CST All Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BE1100	CST GS901 Dark Jam during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE1200	CST GS902 Dark Jam during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE1500	CST GS905 Dark Jam during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE1Z00	CST All Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BE2100	Error occurred by notes remained in CST GS901 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE2200	Error occurred by notes remained in CST GS902 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE2500	Error occurred by notes remained in CST GS905 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

5BE5100	Path error on transport path in CST GS901 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE5200	Path error on transport path in CST GS902 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE5500	Path error on transport path in CST GS905 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE5Z00	Path error on transport path in CST All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BE6100	Path error on sensor except for transport path in CST GS901 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BE6200	Path error on sensor except for transport path in CST GS902 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE6500	Path error on sensor except for transport path in CST GS905 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE6Z00	Path error on sensor except for transport path in CST All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BE7100	Error occurred by the notes disorder in CST GS901 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE7200	Error occurred by the notes disorder in CST GS902 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE7500	Error occurred by the notes disorder in CST GS905 during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BE7Z00	Error occurred by the notes disorder in CST All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BEG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BEG200	CST Failure to move PP to stack position during Collect TSK notes	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5BEG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Collect TSK notes	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5BEG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEG600	CST Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Collect TSK notes	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5BEGA00	CST RC Solenoid Echo error during Collect TSK notes	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.

Problem Code	Problem Description	Troubleshooting
5BEGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5BEGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5BEGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5BEGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEGK00	CST RC Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5B EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5BEJ200	CST No Residue during Collect TSK notes	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5BEJ300	CST Full,Bottom no detect before move RC PP to stack position during Collect TSK notes	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5BER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5BER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BERF00	CST Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BERP00	CST PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BES200	CST Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BES300	CST RC Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BESA00	CST RC Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BESR00	CST Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BF0100	RC7 GSF01 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF0200	RC7 GSF02 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF0500	RC7 GSF05 Light Jam during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5BF0Z00	RC7 All Light Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF1100	RC7 GSF01 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF1200	RC7 GSF02 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BF1500	RC7 GSF05 Dark Jam during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF1Z00	All RC7 Sensor Dark Jam during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF2100	Error occurred by notes remained in RC7 GSF01 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF2200	Error occurred by notes remained in RC7 GSF02 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF2500	Error occurred by notes remained in RC7 GSF05 during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5BF2Z00	Error occurred by notes remained in All RC7 Sensor during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF3100	RC7 GSF01 Sensor auto calibration error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF3200	RC7 GSF02 Sensor auto calibration error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF3500	RC7 GSF05 Sensor auto calibration error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF3Z00	All RC7 Sensor auto calibration error during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF4100	RC7 GSF01 Extern lights check error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF4200	RC7 GSF02 Extern lights check error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BF4500	RC7 GSF05 Extern lights check error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF4Z00	All RC7 Sensor Extern lights check error during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF5100	RC7 GSF01 Path error on transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF5200	RC7 GSF02 Path error on transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF5500	RC7 GSF05 Path error on transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF5Z00	All RC7 Sensor Path error on transport path during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF6100	RC7 GSF01 Path error on sensor except for transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF6200	RC7 GSF02 Path error on sensor except for transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF6500	RC7 GSF05 Path error on sensor except for transport path during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF6Z00	RC7 All Path error on sensor except for transport path during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BF7100	Error occurred by the notes disorder in RC7 GSF01 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF7200	Error occurred by the notes disorder in RC7 GSF02 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5BF7500	Error occurred by the notes disorder in RC7 GSF05 during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BF7Z00	Error occurred by the notes disorder in RC7 All during Collect TSK notes	1. Operate to initialize BRM.(Recovery)
5BFG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BFG200	RC7 Failure to move PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5BFG400	RC7 Failure to upword moving of PP during RC7 stack roller retreat movement during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5BFG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFG600	RC7 Stack Roller retreat position disorder during RC Separation during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
5BFGA00	RC7 Solenoid Echo error during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
5BFGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5BFGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5BFGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5BFGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5BFGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFGK00	RC7 Stack Roller retreat fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Collect TSK notes	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5BFJ200	RC7 No Residue during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A).5. Fill up the Notes if there are no notes
5BFJ300	Full,Bottom no detect before move RC7 PP to stack position during Collect TSK notes	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
5BFRF00	RC7 Feed Motor response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BFRP00	RC7 PP response timeout during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5BFS200	RC7 Receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BFS300	RC7 Task not for separation receive separation command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BFSA00	RC7 Sub Task receive undefined command during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BFSR00	RC7 Sub Task for Wait Setting Error during Collect TSK notes	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5BUS100	USB Bulk Sequence Error during Retract TSK.	1. Restart over AP-SP
5BUS300	USB Bulk Received Length Error during Retract TSK.	1. Reboot the system
5BUS400	Message transmission Error from USB to Main Task during Retract TSK.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5BUS500	Message reception Error from MainTask to USB during Retract TSK.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5BUSCMD	Bulk command data check error during Collect TSK notes. (USB communication failure)	1. Restart over AP-SP
5BUSCRC	CRC data check error during Collect TSK notes. (USB communication failure)	1. Restart over AP-SP
5BUSLEN	Bulk length error during Collect TSK notes. (USB communication failure)	1. Restart over AP-SP
5C00C00	GS030 Light Jam error during Withdrawal for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5C1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5C2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C30100	RC3 GS301 Light Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C30200	RC3 GS302 Light Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C30500	RC3 GS305 Light Jam during EEPROM Read/Write	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5C31100	RC3 GS301 Dark Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C31200	RC3 GS302 Dark Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C31500	RC3 GS305 Dark Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C32100	Error occurred by notes remained in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C32200	Error occurred by notes remained in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C32500	Error occurred by notes remained in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5C33100	Sensor auto calibration error in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C33200	Sensor auto calibration error in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C33500	Sensor auto calibration error in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C34100	Extern lights check error in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C34200	Extern lights check error in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C34500	Extern lights check error in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C35100	Path error on transport path in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C35200	Path error on transport path in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C35500	Path error on transport path in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C36100	Path error on sensor except for transport path in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5C36200	Path error on sensor except for transport path in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C36500	Path error on sensor except for transport path in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C37100	Error occurred by the notes disorder in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C37200	Error occurred by the notes disorder in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C37500	Error occurred by the notes disorder in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C3L100	Remaining notes stack process error in RC3 GS301 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C3L200	Remaining notes stack process error in RC3 GS302 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C3L500	Remaining notes stack process error in RC3 GS305 during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5C40100	RC4 GS401 Light Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C40200	RC4 GS402 Light Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C40500	RC4 GS405 Light Jam during EEPROM Read/Write	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5C41100	RC4 GS401 Dark Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5C41200	RC4 GS402 Dark Jam during EEPROM Read/Write	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

5C8HF09	BC FPGA VERSION Fail during EEPROM Read/Write	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5C8HF11	Detection DB #01 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF12	Detection DB #02 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF13	Detection DB #03 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF14	Detection DB #04 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF15	Detection DB #05 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF16	Detection DB #06 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF17	Detection DB #07 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF18	Detection DB #08 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF19	Detection DB #09 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HF20	Detection DB #10 loading Fail during EEPROM Read/Write	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5C8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during EEPROM Read/Write	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5C8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during EEPROM Read/Write	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG03	BC Transaction Ready Fail When Receive BC READY Command during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5C8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during EEPROM Read/Write	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during EEPROM Read/Write	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during EEPROM Read/Write	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG07	Receive BC Unknown Command during EEPROM Read/Write	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5C8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during EEPROM Read/Write	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during EEPROM Read/Write	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during EEPROM Read/Write	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5C8HG11	No Nation Code When Receive BC READY Command during EEPROM Read/Write	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during EEPROM Read/Write	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5C8HG20	Fail to Initialize CIS When Receive BC READY Command during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5C8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5C8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
5C8HG23	DD Sensor DAC Set Error When Receive BC READY Command during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5C8HG24	ENCODER Mode Set Error When Receive BC READY Command during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5C8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during EEPROM Read/Write	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during EEPROM Read/Write	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during EEPROM Read/Write	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during EEPROM Read/Write	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during EEPROM Read/Write	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during EEPROM Read/Write	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during EEPROM Read/Write	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during EEPROM Read/Write	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during EEPROM Read/Write	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during EEPROM Read/Write	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during EEPROM Read/Write	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during EEPROM Read/Write	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5C8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during EEPROM Read/Write	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during EEPROM Read/Write	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during EEPROM Read/Write	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during EEPROM Read/Write	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during EEPROM Read/Write	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG46	Bill Number Error When Receive Check No Write Command during EEPROM Read/Write	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during EEPROM Read/Write	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG48	Bill Number Table CRC Error When Receive Check No Write Command during EEPROM Read/Write	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during EEPROM Read/Write	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HH01	Fail to Delete NAND FLASH during EEPROM Read/Write	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5C8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during EEPROM Read/Write	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5C8HH03	Fail to Download Detection DB during EEPROM Read/Write	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5C8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during EEPROM Read/Write	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5C8HH05	Detection DB Download File Check Error during EEPROM Read/Write	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5C8HH06	Detection DB Download File Size Error during EEPROM Read/Write	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5C8HH07	DB Table Save Error After Download Detection DB during EEPROM Read/Write	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5C8HH08	Over Detection DB Download (Over 10) during EEPROM Read/Write	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5C8HH09	Detection DB Header Information Error during EEPROM Read/Write	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5C8HH10	EP Download Fail during EEPROM Read/Write	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5C8HH11	EP Download Check Error during EEPROM Read/Write	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5C8HH12	EP Download File Size Error during EEPROM Read/Write	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5C8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during EEPROM Read/Write	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5C8HH14	BC FPGA Download Fail during EEPROM Read/Write	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5C8HH15	Header Information Save Error After BC FPGA Download during EEPROM Read/Write	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5C8HH16	Not Provide BC FPGA Download during EEPROM Read/Write	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5C8HH17	EEPROM READ/WRITE Error during EEPROM Read/Write	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5C8HH18	Receive Unit Serial Number Undefined Option during EEPROM Read/Write	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5C8HH19	Receive USB Undefined Command during EEPROM Read/Write	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5C8HH20	No BC Process Note When Receive Image Upload Command during EEPROM Read/Write	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH21	FC1 Set Error When Receive Image Upload Command during EEPROM Read/Write	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH22	BC is Processing Note When Receive Image Upload Command during EEPROM Read/Write	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH23	FC2 Set Error When Receive Image Upload Command during EEPROM Read/Write	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH24	Not Provide Total Image Upload Function during EEPROM Read/Write	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
5C8HH25	Not Provide Note Number Detection Image Upload Function during EEPROM Read/Write	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5C8HH26	FC2 Set Error When Receive Image Information Upload Command during EEPROM Read/Write	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during EEPROM Read/Write	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during EEPROM Read/Write	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during EEPROM Read/Write	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during EEPROM Read/Write	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during EEPROM Read/Write	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during EEPROM Read/Write	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during EEPROM Read/Write	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during EEPROM Read/Write	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5C8HI01	RecogTask Messeage Timeout Error during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5C8HI02	ScanTask Messeage Timeout Error during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5C8HI03	UartTask Messeage Timeout Error during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5C8HI04	BcUsbTask Messeage Timeout Error during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5C8HJ01	Algorithm Initialize Fail during EEPROM Read/Write	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HJ02	Algorithm Ready Fail during EEPROM Read/Write	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5C8HJ03	Algorithm Information Set Error during EEPROM Read/Write	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5C8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during EEPROM Read/Write	1. Retry the operation
5C8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during EEPROM Read/Write	1. Check the number of CST Setting notes info
5C8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during EEPROM Read/Write	1. Check Withdrawal notes setting
5C8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during EEPROM Read/Write	1. Check Withdrawal notes info
5C8HS01	FPGA Write Data Error When Initialize Scan Driver during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS05	Not Process Shading When Initialize Scan Driver during EEPROM Read/Write	1. Perform CIS Shading.2. Operate to initialize BRM(Recovery)
5C8HS08	Fail to Set DAC When Initialize Scan Driver during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS11	FPGA Write Data Error When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS13	Fail to Set CIS Led On Value When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS14	Fail to Set Source of Scan Ligh When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS15	Not Process Shading When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS17	Fail to Set AFE Chip When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS18	Fail to Set DAC When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS19	MR/UV/DD Sampling Start Error When BC Ready during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5C8HS1A	Fail to Set 2-Notes DAC When BC Ready during EEPROM Read/Write	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5C8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during EEPROM Read/Write	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5C8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS28	Fail to Set DAC When Stop BC during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS29	MR/UV/DD Sampling Stop Error When Stop BC during EEPROM Read/Write	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5C8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during EEPROM Read/Write	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5C8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during EEPROM Read/Write	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5C8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during EEPROM Read/Write	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5C8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during EEPROM Read/Write	1. Retry the operation2. Change BC
5C8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during EEPROM Read/Write	1. Retry the operation2. Change BC
5C8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during EEPROM Read/Write	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5C8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during EEPROM Read/Write	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5C8HS38	Max Ontime Ove When Process CIS Shadng – Use in Plant during EEPROM Read/Write	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5C8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during EEPROM Read/Write	1. Retry the operation2. Change BC
5C8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during EEPROM Read/Write	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5C8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during EEPROM Read/Write	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5C8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during EEPROM Read/Write	1. Retry the operation2. Change BC
5C8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5C8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5C8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CAA100	UTC open Error before operation EEPROM Read/Write	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5CAA200	TSK open Error before operation EEPROM Read/Write	1. Open the upper unit. 2. Check the TSK open and close
5CAA300	BMU Inter Lock Error before operation EEPROM Read/Write	1. Check BMU open and close
5CAA400	BMU open Error before operation EEPROM Read/Write	1. Check BMU open and close
5CAA500	Replenishment CST open Error before operation EEPROM Read/Write	1. Check the Transit CST installation
5CAA600	CSM open Error before operation EEPROM Read/Write	1. Open the upper unit. 2. Check CSM Open/Close
5CAA800	BMD Inter Lock Error before operation EEPROM Read/Write	1. Open the lower unit. 2. Check the BMD open and close
5CAA900	BMD open Error before operation EEPROM Read/Write	1. Open the lower unit. 2. Check the BMD open and close
5CAAA00	BC Open Error before operation EEPROM Read/Write	1. Open the upper unit. 2. Check BC Open/Close
5CAAB00	RC Full Error before operation EEPROM Read/Write	1. Open the lower unit. 2. Check RC Full and remove notes
5CAAC00	RJC Full Error before operation EEPROM Read/Write	1. Open the upper unit. 2. Check RJC Full and remove notes
5CAAD00	UTC Full Error before operation EEPROM Read/Write	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5CAAE00	RTC Full Error before operation EEPROM Read/Write	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5CAAF00	RC Empty Error before operation EEPROM Read/Write	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5CAAG00	Suspected note RC open Error before operation EEPROM Read/Write	1. Open the lower unit. 2. Check the RC removal and reinstall
5CAE100	Received operation command without Initial Info Set during EEPROM Read/Write	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5CAE200	Status on not operation reception command during EEPROM Read/Wrie	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization

Problem Code	Problem Description	Troubleshooting
5CAE300	Received operation command without System Info Read during EEPROM Read/Write	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initial Info Set -> Initialization
5CAE400	Transaction was executed without Initializing after power on during EEPROM Read/Write	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initial Info Set -> Initialization
5CAEE00	RBU RS485 communication sequence disorder during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5CAEF00	RBU RS485 connection line disorder during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5CAEL00	RBU communication was not ready after power on during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5CAH100	CSM EEPROM write Error during EEPROM Read/Write	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5CAH200	CSM EEPROM read Error during EEPROM Read/Write	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5CAH300	TSK EEPROM write Error during EEPROM Read/Write	1. Check TSK EEPROM2. Cehck TSK EEPROM connection3. Replace TSK B/D if same error occurs during EEPROM R/W
5CAH400	TSK EEPROM read Error during EEPROM Read/Write	1. Check TSK EEPROM2. Cehck TSK EEPROM connection3. Replace TSK B/D if same error occurs during EEPROM R/W
5CAH600	Failure to check clearing NVRAM during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CAH700	Failure to write specific character after NVRAM clear during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CAH800	CST EEPROM write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CAH900	CST EEPROM read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CAHA00	BMU EEPROM write Error during EEPROM Read/Write	1. Replace BMU B/D
5CAHB00	BMU EEPROM read Error during EEPROM Read/Write	1. Replace BMU B/D
5CAS100	No Module During EEPROM Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CAS200	No Write Option During EEPROM Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5CAS300	Module set error during Error Info R/C Command.(No module set or reserve set)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CBH100	RC1 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH200	RC2 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH300	RC3 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH400	RC4 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH500	RC5 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH600	RC6 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH700	RC1 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH800	RC2 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBH900	RC3 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBHA00	RC4 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBHB00	RC5 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBHC00	RC6 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBHD00	RC1 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5CBHE00	RC2 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5CBHF00	RC3 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5CBHG00	RC4 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5CBHH00	RC5 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5CBHJ00	RC6 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5CBHK00	BMD Open Error During EEPROM Read/Write during EEPROM Read/Write	1. Check the lower Unit load/removal
5CBHU00	BMD EEPROM Read Error during EEPROM Read/Write	1. Replace RBU B/D
5CBHV00	BMD EEPROM Write Error during EEPROM Read/Write	1. Replace RBU B/D
5CBHW00	BMD EEPROM Verify Error during EEPROM Read/Write	1. Replace RBU B/D
5CBHX00	RC7 EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBHY00	RC7 EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CBHZ00	RC7 EEPROM Verify Error during EEPROM Read/Write	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5CBR000	RBU Response Timeout during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CBR700	RBU Response Message Timeout during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CBS100	RBU RS-232 Seq Num Echo Error during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CBS200	RBU RS-232 MI Echo Error during EEPROM Read/Write	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CEH800	CST EEPROM Write Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5CEH900	CST EEPROM Read Error during EEPROM Read/Write	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5CER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CUS100	USB Bulk Sequence Error during EEPROM Read/Write.	1. Restart over AP-SP
5CUS300	USB Bulk Received Length Error during EEPROM Read/Write.	1. Reboot the system
5CUS400	Message transmission Error from USB to Main Task during EEPROM Read/Write.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5CUS500	Message reception Error from MainTask to USB during EEPROM Read/Write.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5CUSCMD	Bulk command data check error during EEPROM Read/Write. (USB communication failure)	1. Restart over AP-SP
5CUSCRC	CRC data check error during EEPROM Read/Write. (USB communication failure)	1. Restart over AP-SP
5CUSLEN	Bulk length error during EEPROM Read/Write. (USB communication failure)	1. Restart over AP-SP
5D00600	GS006 Light Jam error during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D00H00	GS618 Light Jam error during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D00J00	GS619 Light Jam error during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D01600	GS006 Dark Jam error during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D01H00	GS618 Dark Jam error during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D01J00	GS619 Dark Jam error during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02100	Error occurred by notes remained in GS801 during Initialize	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5D02200	Error occurred by notes remained in GS002 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02300	Error occurred by notes remained in GS003 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02400	Error occurred by notes remained in GS004 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02500	Error occurred by notes remained in GS005 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02600	Error occurred by notes remained in GS006 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02700	Error occurred by notes remained in GS014 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D02800	Error occurred by notes remained in GS018 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02900	Error occurred by notes remained in GS020 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02A00	Error occurred by notes remained in GS021 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02C00	Error occurred by notes remained in GS030 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02E00	Error occurred by notes remained in GS001 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02H00	Error occurred by notes remained in GS618 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02J00	Error occurred by notes remained in GS619 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02M00	Error occurred by notes remained in GSA01 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02N00	Error occurred by notes remained in GSA02 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02P00	Error occurred by notes remained in GSA03 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D02Q00	Error occurred by notes remained in GSD01 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D02W00	Error occurred by notes remained in GS802 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06100	GS801 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5D06200	GS002 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06300	GS003 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06400	GS004 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06500	GS005 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06600	GS006 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06700	GS014 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06800	GS018 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D06900	GS020 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06A00	GS021 Path error on sensor except for transport path during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06C00	GS030 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06E00	GS001 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06H00	GS618 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06J00	GS619 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06M00	GSA01 Path error on sensor except for transport path during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06N00	GSA02 Path error on sensor except for transport path during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06P00	GSA03 Path error on sensor except for transport path during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D06Q00	GSD01 Path error on sensor except for transport path during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D06W00	GS802 Path error on sensor except for transport path during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D07600	Error occurred by the notes disorder in GS006 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D07H00	Error occurred by the notes disorder in GS618 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D07J00	Error occurred by the notes disorder in GS619 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0F100	GM001 motor doesn't operate at a constant speed when the motor works during Initialize	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5D0F200	GM002 motor doesn't operate at a constant speed when the motor works during Initialize	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5D0F400	GM004 motor doesn't operate at a constant speed when the motor works during Initialize	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5D0F600	GM006 motor doesn't operate at a constant speed when the motor works during Initialize	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5D0F700	GM007 motor doesn't operate at a constant speed when the motor works during Initialize	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5D0F900	GM009 motor doesn't operate at a constant speed when the motor works during Initialize	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5D0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Initialize	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5D0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Initialize	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5D0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Initialize	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
5D0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Initialize	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5D0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Initialize	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5D0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Initialize	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
5D0FJF0	Fail to check GM001 motor encoder normal status during Initialize (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FJF1	Fail to check GM001 motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FKF0	Fail to check GM002 motor encoder normal status during Initialize (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FKF1	Fail to check GM002 motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FLF0	Fail to check GM004 motor encoder normal status during Initialize (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FLF1	Fail to check GM004 motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FMF0	Fail to check GM006 motor encoder normal status during Initialize (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FMF1	Fail to check GM006 motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FNF0	Fail to check GM007 motor encoder normal status during Initialize (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FNF1	Fail to check GM007 motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FPF0	Fail to check GM009 motor encoder normal status during Initialize (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FPF1	Fail to check GM009 motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0FZ00	Fail to check motor encoder normal status during Initialize	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5D0G100	Failure to 3Way Gate 0 degree mode conversion during Initialize	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize

Problem Code	Problem Description	Troubleshooting
5D0G200	Failure to 3Way Gate 120 degree mode conversion during Initialize	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5D0GB00	Time Out to 3Way Gate Mode conversion during Initialize	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5D0GC00	Failure to RTRJ Gate RJC Mode conversion during Initialize	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5D0GD00	Failure to RTRJ Gate RTC Mode conversion during Initialize	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5D0L100	Remaining notes stack process error in GS801 during Initialize	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L200	Remaining notes stack process error in GS002 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L300	Remaining notes stack process error in GS003 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L400	Remaining notes stack process error in GS004 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L500	Remaining notes stack process error in GS005 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L600	Remaining notes stack process error in GS006 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L700	Remaining notes stack process error in GS014 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D0L800	Remaining notes stack process error in GS018 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0L900	Remaining notes stack process error in GS020 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LA00	Remaining notes stack process error in GS021 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LB00	Fail to Stack Jammed note in previous upper Transport during Initialize	1. Open the upper unit2. Check remained Notes and substance in the upper Transport Path3. Initialize
5D0LC00	Remaining notes stack process error in GS030 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LD00	Fail to Stack Jammed note in previous lower Transport during Initialize	1. Open the lower unit2. Check remained Notes and substance in the lower Transport Path3. Initialize
5D0LE00	Remaining notes stack process error in GS001 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LH00	Remaining notes stack process error in GS618 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LJ00	Remaining notes stack process error in GS619 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LM00	Remaining notes stack process error in GSA01 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LN00	Remaining notes stack process error in GSA02 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D0LP00	Remaining notes stack process error in GSA03 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LQ00	Remaining notes stack process error in GSD01 during Initialize	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LW00	Remaining notes stack process error in GS802 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D0LZ00	Fail to Stack Jammed note in previous Transport during Initialize	1. Open the lower, upper unit2. Check remained Notes and substance in the upper, lower Transport Path3. Initialize
5D0N700	More than 3 notes are stacked in RC during Initialize	1. Operate to initialize BRM(Recovery)
5D0N800	Fail to remove note in RC Separation sensor(GSx06) during Initialize	1. Operate to initialize BRM(Recovery)
5D0Q100	UTC detachment Error during Initialize	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5D0Q200	TSK detachment Error during Initialize	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5D0Q300	BMU Inter Lock Error during Initialize	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5D0Q400	BMU detackment Error during Initialize	1. Check Load/Removal of the upper unit
5D0Q500	Replenishment CST detachment Error during Initialize	1. Check the safe door open
5D0Q600	CSM detackment Error during Initialize	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
5D0Q800	BMD Inter Lock Error during Initialize	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5D0Q900	BMD detachment Error during Initialize	1. Check the lower Unit load/removal
5D0QA00	BC Open Error during Initialize	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5D0QR00	OC(Operation Cassette) Open Error during Initialize	1. Set OC(Operation Cassette)2. Perform Initialize
5D0QS00	Receive Error Stop CMD during Initialize	1. Initialize
5D0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5D0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D0SZ00	Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D12500	Error occurred by notes remained in RC1 GS105 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D16500	Path error on sensor except for transport path in RC1 GS105 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D1G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D1G200	RC1 Failure to move PP to stack position during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5D1G400	RC1 Failure to upward moving of PP during RC1 stack roller retreat movement during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5D1G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1G600	RC1 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5D1GA00	RC1 Solenoid Echo error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs

Problem Code	Problem Description	Troubleshooting
5D1GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D1GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Put down the Stage after open the recycle cassette door (A)5. Remove note.
5D1GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Put down the Stage after open the recycle cassette door (A)5. Remove note.
5D1GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GK00	RC1 Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D1GQ00	RJC Press and Stack position fail during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
5D1GR00	RJC Stack position fail during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5D1GS00	RC1 RJC Press position fail during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5D1GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5D1GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5D1GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5D1GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5D1GX00	RC1 GS101 detects notes during RJC intialize during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D1J100	RJC Full during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5D1J200	RC1 No Residue during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A).5. Fill up the Notes if there are no notes
5D1J300	Full,Bottom no detect before move RC1 PP to stack position during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5D1L100	RC GS101 Remaining notes stack process error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D1L200	RC GS102 Remaining notes stack process error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D1L500	RC GS105 Remaining notes stack process error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D1LZ00	RC All Sensor Remaining notes stack process error during Initialize	1. Operate to initialize BRM.(Recovery)
5D1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1RF00	RC1 Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1RP00	RC1 PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1S200	RC1 Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1S300	RC1 Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1SA00	RC1 Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D1SR00	RC1 Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D22500	Error occurred by notes remained in RC2 GS205 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D26500	Path error on sensor except for transport path in RC2 GS205 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D2G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D2G200	RC2 Failure to move PP to stack position during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
5D2G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
5D2G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2G600	RC2 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5D2GA00	RC2 Solenoid Echo error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5D2GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D2GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5D2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5D2GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2GK00	RC2 Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D2J200	RC2 No Residue during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
5D2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5D2L100	Remaining notes stack process error in RC2 GS201 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D2L200	Remaining notes stack process error in RC2 GS202 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D2L500	Remaining notes stack process error in RC2 GS205 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D2LZ00	Remaining notes stack process error in RC2 All during Initialize	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5D2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2RF00	RC2 Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2RP00	RC2 PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2S200	RC2 Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2S300	RC2 Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2SA00	RC2 Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D2SR00	RC2 Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D30100	RC3 GS301 Light Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D30200	RC3 GS302 Light Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D30500	RC3 GS305 Light Jam during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5D31100	RC3 GS301 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D31200	RC3 GS302 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D31500	RC3 GS305 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D32100	Error occurred by notes remained in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D32200	Error occurred by notes remained in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D32500	Error occurred by notes remained in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D33100	Sensor auto calibration error in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D33200	Sensor auto calibration error in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D33500	Sensor auto calibration error in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D34100	Extern lights check error in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D34200	Extern lights check error in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D34500	Extern lights check error in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D35100	Path error on transport path in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D35200	Path error on transport path in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D35500	Path error on transport path in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D36100	Path error on sensor except for transport path in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D36200	Path error on sensor except for transport path in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D36500	Path error on sensor except for transport path in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D37100	Error occurred by the notes disorder in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D37200	Error occurred by the notes disorder in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D37500	Error occurred by the notes disorder in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D3G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D3G200	RC3 Failure to move PP to stack position during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
5D3G400	RC3 Failure to upward moving of PP during RC3 stack roller retreat movement during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
5D3G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3G600	RC3 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
5D3GA00	RC3 RC Solenoid Echo error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
5D3GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D3GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5D3GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5D3GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D3J200	RC3 No Residue during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
5D3J300	RC3 Full,Bottom no detect before move RC PP to stack position during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
5D3L100	Remaining notes stack process error in RC3 GS301 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D3L200	Remaining notes stack process error in RC3 GS302 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D3L500	Remaining notes stack process error in RC3 GS305 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D3LZ00	Remaining notes stack process error in RC3 All during Initialize	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5D3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3RF00	RC3 Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3RP00	RC3 PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3S200	RC3 Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3S300	RC3 RC Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3SA00	RC3 RC Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D3SR00	RC3 Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D40100	RC4 GS401 Light Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D40200	RC4 GS402 Light Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D40500	RC4 GS405 Light Jam during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5D41100	RC4 GS401 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D41200	RC4 GS402 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D41500	RC4 GS405 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D42100	Error occurred by notes remained in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D42200	Error occurred by notes remained in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D42500	Error occurred by notes remained in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D43100	Sensor auto calibration error in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D43200	Sensor auto calibration error in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D43500	Sensor auto calibration error in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D44100	Extern lights check error in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D44200	Extern lights check error in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D44500	Extern lights check error in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D45100	Path error on transport path in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D45200	Path error on transport path in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D45500	Path error on transport path in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D46100	Path error on sensor except for transport path in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D46200	Path error on sensor except for transport path in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D46500	Path error on sensor except for transport path in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D47100	Error occurred by the notes disorder in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D47200	Error occurred by the notes disorder in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D47500	Error occurred by the notes disorder in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D4G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D4G200	RC4 Failure to move PP to stack position during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5D4G400	RC4 Failure to upward moving of PP during RC4 stack roller retreat movement during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5D4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4G600	RC4 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5D4GA00	RC4 RC Solenoid Echo error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
5D4GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D4GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5D4GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5D4GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D4J200	RC4 No Residue during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes
5D4J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
5D4L100	Remaining notes stack process error in RC4 GS401 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D4L200	Remaining notes stack process error in RC4 GS402 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D4L500	Remaining notes stack process error in RC4 GS405 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D4LZ00	Remaining notes stack process error in RC4 All during Initialize	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5D4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4RF00	RC4 Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4RP00	RC4 PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4S200	RC4 Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4S300	RC4 RC Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4SA00	RC4 RC Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D4SR00	RC4 Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D50100	RC5 GS501 Light Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D50200	RC5 GS502 Light Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D50500	RC5 GS505 Light Jam during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E).4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5D51100	RC5 GS501 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D51200	RC5 GS502 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D51500	RC5 GS505 Dark Jam during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D52100	Error occurred by notes remained in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D52200	Error occurred by notes remained in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D52500	Error occurred by notes remained in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D53100	Sensor auto calibration error in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D53200	Sensor auto calibration error in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D53500	Sensor auto calibration error in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D54100	Extern lights check error in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D54200	Extern lights check error in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D54500	Extern lights check error in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D55100	Path error on transport path in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D55200	Path error on transport path in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D55500	Path error on transport path in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D56100	Path error on sensor except for transport path in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D56200	Path error on sensor except for transport path in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D56500	Path error on sensor except for transport path in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D57100	Error occurred by the notes disorder in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D57200	Error occurred by the notes disorder in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D57500	Error occurred by the notes disorder in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5D5G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D5G200	RC5 Failure to move PP to stack position during Initialize	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.
5D5G400	RC5 Failure to upward moving of PP during RC5 stack roller retreat movement during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
5D5G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5G600	RC5 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
5D5GA00	RC5 Solenoid Echo error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
5D5GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D5GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5D5GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5D5GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5GK00	RC5 Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5D5J200	RC5 No Residue during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E)5. Fill up the Notes if there are no notes
5D5J300	RC5 Full,Bottom no detect before move RC PP to stack position during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
5D5L100	Remaining notes stack process error in RC5 GS501 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D5L200	Remaining notes stack process error in RC5 GS502 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D5L500	Remaining notes stack process error in RC5 GS505 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5D5LZ00	Remaining notes stack process error in RC5 All during Initialize	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5D5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5RF00	RC5 Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5RP00	RC5 PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5S200	RC5 Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5S300	RC5 Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5SA00	RC5 Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D5SR00	RC5 Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D61H00	GS618/619 Dark Jam error during Initialize.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5D62100	CSM Residue Error during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5D62200	CSM No separation notes Error during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5D62300	CSM insert notes excess Error during Initialize	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recover open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)

Problem Code	Problem Description	Troubleshooting
5D62500	CSM notes disappear Error during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5D62600	CSM notes appear Error during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5D62700	CSM notes drop Error during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5D62Z00	CSM Residue Error during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5D6G100	Fail to move CSM BP to Stack Position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5D6G200	Fail to move CSM BP to Deposit Position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5D6G300	Fail to move CSM BP to Separation Position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5D6G500	Fail to move CSM BP to Note-Out Position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5D6G600	Fail to move CSM P-Roller to Home position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5D6G800	Fail to CSM return notes during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5D6G900	CSM GM601 Step out during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5D6GA00	Fail to move CSM BP to return note Position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5D6GB00	Fail to move CSM FP to Deposit Position during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)

Problem Code	Problem Description	Troubleshooting
5D6GD00	Fail to move CSM Lift to Up position during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
5D6GE00	Fail to move CSM Lift to Down position during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
5D6GF00	Fail to move CSM G-Roller to Homeposition during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5D6GG00	Fail to move both CSM P/G-Roller to Homeposition during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5D6M200	CSM Inner Shutter Open Error during Initialize	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5D6M300	CSM Inner Shutter Close Error during Initialize	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5D6M400	CSM Outer Shutter Open Error during Initialize	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5D6M500	CSM Outer Shutter Close Error during Initialize	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5D6M600	CSM Outer Shutter is Opened during Initialize	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5D6M700	CSM Inner Shutter Open during Stack during Initialize	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5D6M800	CSM Stopper Home position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5D6M900	CSM Stopper Stack position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5D6MB00	CSM Bill Supporter Up position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize

Problem Code	Problem Description	Troubleshooting
5D6MC00	CSM Bill Supporter Down position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5D6P100	CSM PP Withdrawal(Stack) position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P200	CSM PP Deposit position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P300	CSM PP Separation position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P400	CSM PP collect lost notes position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P500	CSM PP Note-out position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P600	CSM PP Note-arrange position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P800	CSM PP Control Stack Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6P900	CSM PP Return note position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5D6PD00	CSM PP Check semi-note Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Initialize	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5D6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RB00	CSM BP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RF00	CSM Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RL00	CSM Lift response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RP00	CSM PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RR00	CSM Bill supporter response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RS00	CSM Inner Shutter response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6RT00	CSM Stopper response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D6SA00	CSM Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5D6SR00	CSM Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D70100	TSK GS701 Light Jam during Initialize	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5D70200	TSK GS702 Light Jam during Initialize	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5D70300	TSK GS703,4 Light Jam during Initialize	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5D70Z00	TSK All Light Jam during Initialize	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5D71100	TSK GS701 Dark Jam during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D71200	TSK GS702 Dark Jam during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D71300	TSK GS703,4 Dark Jam during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D71Z00	TSK All Dark Jam during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D72100	Error occurred by notes remained in TSK GS701 during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D72200	Error occurred by notes remained in TSK GS702 during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D72300	Error occurred by notes remained in TSK GS703,4 during Initialize	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5D72Z00	Error occurred by notes remained in TSK All Sensor during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D77100	Error occurred by the notes disorder in TSK GS701 during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5D77200	Error occurred by the notes disorder in TSK GS702 during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D77300	Error occurred by the notes disorder in TSK GS703,4 during Initialize	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5D77Z00	Error occurred by the notes disorder in TSK All during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7B200	Note detected in TSK Entry After Separate Ready during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7C100	TSK Miss-pickup during separation during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber
5D7C200	TSK Last note unclear during separation during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
5D7C300	TSK Last note No front detect during separataion during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7C400	TSK Last note No rear detect during separataion during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7C500	TSK Max Length NG occur 10 times Dark Jam during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5D7C600	TSK Max length note stucked in entry Light Jam during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7C700	TSK Light Jam Retry Over Error during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Initialize	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5D7C900	TSK Low speed control 30 times over Error during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5D7CA00	TSK Incounted note is not Outcounted for 500ms during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5D7F100	TSK GM701 stepout during separation during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
5D7F300	TSK GM701 F-Roller Homeposition fail during Initialize	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
5D7G100	GM701 Return notes fail during Initialize	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
5D7J100	TSK Full during Initialize	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
5D7J200	TSK Empty during ready separation during Initialize	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5D7L100	Remaining notes stack process error in TSK GS701 during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7L200	Remaining notes stack process error in TSK GS702 during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7L300	Remaining notes stack process error in TSK GS703,4 during Initialize	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5D7LZ00	Remaining notes stack process error in TSK All during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5D7M100	TSK Stopper Home position for intialize fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed
5D7M200	TSK Stopper Stack position for intialize fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed
5D7M300	TSK Stopper Return note position for intialize fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if stopper was obstructed
5D7M400	TSK Stopper Lock FP Fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if FP(Front Plate) was obstructed
5D7M500	TSK Stopper Unlock FP Fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if FP(Front Plate) was obstructed
5D7P100	FP Sensor detect Dark Fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5D7P200	FP Sensor detect Light Fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate

Problem Code	Problem Description	Troubleshooting
5D7P300	PP Press position fail during Initialize	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
5D7Q700	TSK Door Open during operation in Initialize	1. Close the door of TSK(5)
5D7Q800	TSK Door Lock fail during operation in Initialize	1. Operate to initialize BRM(Recovery)2. Retry the operation.
5D7Q900	TSK Door Release fail during operation in Initialize	1. Operate to initialize BRM(Recovery)2. Retry the operation.
5D7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7RF00	TSK Feed Motor response timeout in Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7RP00	TSK PP response timeout in Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7RT00	TSK Stopper response timeout in Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7S200	TSK Receive undefined command in Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D7SR00	TSK Sub Task for Wait Setting Error in Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8HA01	GS801A Sensor Error during Initialize	1. Check GS801A2. Operate to initialize BRM(Recovery)
5D8HA02	GS801B Sensor Error during Initialize	1. Check GS801B2. Operate to initialize BRM(Recovery)
5D8HA03	GS801A, GS801B Sensor Error during Initialize	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5D8HA04	GS802A Sensor Error during Initialize	1. Check GS802A2. Operate to initialize BRM(Recovery)
5D8HA05	GS801A, GS802A Sensor Error during Initialize	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5D8HA06	GS801B, GS802A Sensor Error during Initialize	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5D8HA07	GS801A, GS801B, GS802A Sensor Error during Initialize	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5D8HA08	GS802B Sensor Error during Initialize	1. Check GS802B2. Operate to initialize BRM(Recovery)
5D8HA09	GS801A, GS802B Sensor Error during Initialize	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5D8HA10	GS801B, GS802B Sensor Error during Initialize	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5D8HA11	GS801A, GS801B, GS802B Sensor Error during Initialize	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5D8HA12	GS802A, GS802B Sensor Error during Initialize	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5D8HA13	GS801A, GS802A, GS802B Sensor Error during Initialize	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5D8HA14	GS801B, GS802A, GS802B Sensor Error during Initialize	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5D8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Initialize	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5D8HB01	MR Sensor Level Error during Initialize	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5D8HC02	UV_01 Sensor Level Error during Initialize	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5D8HF03	CIS Shading data loading Fail during Initialize	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5D8HF04	Detection DB Table loading Fail during Initialize	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF05	BC FPGA Data checksum Fail during Initialize	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5D8HF06	BC FPGA Configuration Fail during Initialize	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5D8HF07	BC FPGA Header Information Loading Fail during Initialize	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5D8HF08	BC FPGA Initialize Fail during Initialize	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5D8HF09	BC FPGA VERSION Fail during Initialize	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5D8HF11	Detection DB #01 loading Fail during Initialize	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF12	Detection DB #02 loading Fail during Initialize	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF13	Detection DB #03 loading Fail during Initialize	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5D8HF14	Detection DB #04 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF15	Detection DB #05 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF16	Detection DB #06 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF17	Detection DB #07 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF18	Detection DB #08 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF19	Detection DB #09 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HF20	Detection DB #10 loading Fail during Initialize	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5D8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Initialize	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Initialize	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG03	BC Transaction Ready Fail When Receive BC READY Command during Initialize	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5D8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Initialize	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Initialize	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Initialize	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG07	Receive BC Unknown Command during Initialize	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5D8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Initialize	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Initialize	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Initialize	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5D8HG11	No Nation Code When Receive BC READY Command during Initialize	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Initialize	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5D8HG20	Fail to Initialize CIS When Receive BC READY Command during Initialize	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5D8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Initialize	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5D8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Initialize	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5D8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Initialize	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5D8HG24	ENCODER Mode Set Error When Receive BC READY Command during Initialize	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5D8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Initialize	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Initialize	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Initialize	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Initialize	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Initialize	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Initialize	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Initialize	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5D8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Initialize	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Initialize	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Initialize	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Initialize	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Initialize	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Initialize	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Initialize	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Initialize	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Initialize	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Initialize	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG46	Bill Number Error When Receive Check No Write Command during Initialize	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Initialize	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Initialize	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Initialize	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5D8HH01	Fail to Delete NAND FLASH during Initialize	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5D8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Initialize	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5D8HH03	Fail to Download Detection DB during Initialize	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5D8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Initialize	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5D8HH05	Detection DB Download File Check Error during Initialize	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5D8HH06	Detection DB Download File Size Error during Initialize	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5D8HH07	DB Table Save Error After Download Detection DB during Initialize	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5D8HH08	Over Detection DB Download (Over 10) during Initialize	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5D8HH09	Detection DB Header Information Error during Initialize	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5D8HH10	EP Download Fail during Initialize	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5D8HH11	EP Downlaod Check Error during Initialize	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5D8HH12	EP Download File Size Error during Initialize	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5D8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Initialize	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5D8HH14	BC FPGA Download Fail during Initialize	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5D8HH15	Header Information Save Error After BC FPGA Download during Initialize	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5D8HH16	Not Provide BC FPGA Download during Initialize	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5D8HH17	EEPROM READ/WRITE Error during Initialize	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5D8HH18	Receive Unit Serial Number Undefined Option during Initialize	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5D8HH19	Receive USB Undefined Command during Initialize	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5D8HH20	No BC Process Note When Receive Image Upload Command during Initialize	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5D8HH21	FC1 Set Error When Receive Image Upload Command during Initialize	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH22	BC is Processing Note When Receive Image Upload Command during Initialize	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH23	FC2 Set Error When Receive Image Upload Command during Initialize	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH24	Not Provide Total Image Upload Function during Initialize	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5D8HH25	Not Provide Note Number Detection Image Upload Function during Initialize	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH26	FC2 Set Error When Receive Image Information Upload Command during Initialize	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Initialize	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Initialize	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Initialize	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Initialize	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Initialize	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Initialize	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Initialize	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Initialize	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5D8HI01	RecogTask Messeage Timeout Error during Initialize	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5D8HI02	ScanTask Messeage Timeout Error during Initialize	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5D8HI03	UartTask Messeage Timeout Error during Initialize	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5D8HI04	BcUsbTask Messeage Timeout Error during Initialize	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5D8HJ01	Algorithm Initialize Fail during Initialize	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HJ02	Algorithm Ready Fail during Initialize	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HJ03	Algorithm Information Set Error during Initialize	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5D8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Initialize	1. Retry the operation
5D8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Initialize	1. Check the number of CST Setting notes info
5D8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Initialize	1. Check Withdrawal notes setting
5D8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Initialize	1. Check Withdrawal notes info
5D8HS01	FPGA Write Data Error When Initialize Scan Driver during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS05	Not Process Shading When Initialize Scan Driver during Initialize	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5D8HS08	Fail to Set DAC When Initialize Scan Driver during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS11	FPGA Write Data Error When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5D8HS13	Fail to Set CIS Led On Value When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS14	Fail to Set Source of Scan Ligh When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS15	Not Process Shading When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS17	Fail to Set AFE Chip When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS18	Fail to Set DAC When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS19	MR/UV/DD Sampling Start Error When BC Ready during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS1A	Fail to Set 2-Notes DAC When BC Ready during Initialize	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5D8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Initialize	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5D8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS28	Fail to Set DAC When Stop BC during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Initialize	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5D8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Initialize	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5D8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Initialize	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5D8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Initialize	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5D8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Initialize	1. Retry the operation2. Change BC
5D8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Initialize	1. Retry the operation2. Change BC
5D8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Initialize	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5D8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Initialize	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5D8HS38	Max Ontime Ove When Process CIS Shadngr – Use in Plant during Initialize	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC

Problem Code	Problem Description	Troubleshooting
5D8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Initialize	1. Retry the operation2. Change BC
5D8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Initialize	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5D8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Initialize	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5D8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Initialize	1. Retry the operation2. Change BC
5D8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8S100	BCU response MI error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8S200	BCU response BCC error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8S300	BCU response Sub MI error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8S400	BCU response Parameter error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5D8S900	BCU response Timeout Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DA2100	Error occurred by notes remained in GS801 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2200	Error occurred by notes remained in GS002 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5DA2300	Error occurred by notes remained in GS003 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2400	Error occurred by notes remained in GS004 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2500	Error occurred by notes remained in GS005 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2600	Error occurred by notes remained in GS006 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2700	Error occurred by notes remained in GS014 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2800	Error occurred by notes remained in GS018 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2900	Error occurred by notes remained in GS020 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2A00	Error occurred by notes remained in GS021 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2E00	Error occurred by notes remained in GS001 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5DA2H00	Error occurred by notes remained in GS618 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2J00	Error occurred by notes remained in GS619 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2K00	Error occurred by notes remained in GS701,702 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2M00	Error occurred by notes remained in GSA01 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2N00	Error occurred by notes remained in GSA02 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2P00	Error occurred by notes remained in GSA03 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2Q00	Error occurred by notes remained in GSD01 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2W00	Error occurred by notes remained in GS802 during Initialize	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5DA2Z00	CSM and TSK notes remains semi OK when Initialize	1. Open the upper unit2. Open the CSM outer/inner shutter open3. Remove notes and substance in the CSM(1)4. Open TSK Door5. Remove notes and substance in the TSK(5)6. Reinstall the upper unit
5DAA100	UTC open Error before operation Initialize	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5DAA200	TSK open Error before operation Initialize	1. Open the upper unit. 2. Check the TSK open and close
5DAA300	BMU Inter Lock Error before operation Initialize	1. Check BMU open and close
5DAA400	BMU open Error before operation Initialize	1. Check BMU open and close

Problem Code	Problem Description	Troubleshooting
5DAA500	Replenishment CST open Error before operation Initialize	1. Check the Transit CST installation
5DAA600	CSM open Error before operation Initialize	1. Open the upper unit. 2. Check CSM Open/Close
5DAA800	BMD Inter Lock Error before operation Initialize	1. Open the lower unit. 2. Check the BMD open and close
5DAA900	BMD open Error before operation Initialize	1. Open the lower unit. 2. Check the BMD open and close
5DAAA00	BC Open Error before operation Initialize	1. Open the upper unit. 2. Check BC Open/Close
5DAAB00	RC Full Error before operation Initialize	1. Open the lower unit. 2. Check RC Full and remove notes
5DAAC00	RJC Full Error before operation Initialize	1. Open the upper unit. 2. Check RJC Full and remove notes
5DAAD00	UTC Full Error before operation Initialize	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5DAAE00	RTC Full Error before operation Initialize	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5DAAF00	RC Empty Error before operation Initialize	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5DAAG00	Suspected note RC open Error before operation Initialize	1. Open the lower unit. 2. Check the RC removal and reinstall
5DAAH00	Status of BMU loading in the BMU Test Mode before the operation during Initialize	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5DAAK00	Status of RTRJC loading in the Test Mode before the operation during Initialize.	1. Open the lower unit2. Open MID Transport(7)3. Check RT/RJC(8) installation condition
5DAAL00	Status of UTC loading in the Test Mode before the operation during Initialize.	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5DAAM00	Status of DPC loading in the Test Mode before the operation during Initialize.	1. Open the lower unit2. Open MID Transport(7)3. Check DPC(A) installation condition
5DAAN00	Status of RJC loading in the Test Mode before the operation during Initialize.	1. Open the lower unit2. Open MID Transport(7)3. Check RJC(8) installation condition
5DAAP00	RC1 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize
5DAAQ00	RC2 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize
5DAAR00	RC3 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize

Problem Code	Problem Description	Troubleshooting
5DAAS00	RC4 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize
5DAAT00	RC5 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize
5DAAU00	RC6 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize
5DAAV00	RT/RJC path disorder notes are not removed before Initialize	1. Open the lower Unit2. Remove RT/RJC CST3. Remove the notes4. close the door and reinstallation
5DAAW00	UTC path disorder notes are not removed before Initialize	1. UTC Door Open2. Remove the notes in UTC entry3. Remove the notes in rear transport4. Check GS004 if same error occurs after Initialize
5DAAX00	RC7 path disorder notes are not removed before Initialize	1. Open the lower Unit2. Open the MID transport3. Remove the RC4. Open the RC Door and down the stage5. Remove Notes stacked in the upper side6. Replace RC if same error occurs during Initialize
5DAE100	Received operation command without Initial Info Set during Initialize	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5DAE200	Status on not operation reception command during Initialize	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5DAE300	Received operation command without System Info Read during Initialize	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5DAE400	Transaction was executed without Initializing after power on during Initialize	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5DAEE00	RBU RS485 communication sequence disorder during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5DAEF00	RBU RS485 connection line disorder during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5DAEL00	RBU communication was not ready after power on during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5DAH600	Failure to check clearing NVRAM during Initialize	1. Operate to initialize BRM(Recovery)
5DAHF00	Transaction count exists but GS801A sensor no change during Initialize	1. Check GS801A2. Operate to initialize BRM(Recovery)
5DAHG00	Transaction count exists but GS801B sensor no change during Initialize	1. Check GS801B2. Operate to initialize BRM(Recovery)
5DAHH00	Transaction count exists but GS802A sensor no change during Initialize	1. Check GS802A2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5DAHJ00	Transaction count exists but GS802B sensor no change during Initialize	1. Check GS802B2. Operate to initialize BRM(Recovery)
5DAR100	Message timeout error during operation ready during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DAR200	Message timeout error during transation operation during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DAR300	Message timeout error during error postprocessing during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DAR800	RBU/BC sensor auto dimming response message timeout error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DARC00	BC response message timeout error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DARJ00	Message timeout error during Stop Ready during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DBH100	RC1 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH200	RC2 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH300	RC3 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH400	RC4 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH500	RC5 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH600	RC6 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH700	RC1 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH800	RC2 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBH900	RC3 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5DBHA00	RC4 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBHB00	RC5 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBHC00	RC6 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBHD00	RC1 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBHE00	RC2 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBHF00	RC3 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBHG00	RC4 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBHH00	RC5 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBHJ00	RC6 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBHK00	BMD Open Error During EEPROM Read/Write during Initialize	1. Check the lower Unit load/removal
5DBHU00	BMD EEPROM Read Error during Initialize	1. Replace RBU B/D
5DBHV00	BMD EEPROM Write Error during Initialize	1. Replace RBU B/D
5DBHW00	BMD EEPROM Verify Error during Initialize	1. Replace RBU B/D
5DBHX00	RC7 EEPROM Read Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBHY00	RC7 EEPROM Write Error during Initialize	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5DBHZ00	RC7 EEPROM Verify Error during Initialize	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5DBR000	RBU Response Timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DBR700	RBU Response Message Timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DBS100	RBU RS-232 Seq Num Echo Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5DBS200	RBU RS-232 MI Echo Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DBSS00	RBU Auto Calibration Command Parameter Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DBST00	RBU RTC Set Time valid Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DC0100	RC6 GSC01 Light Jam during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC0200	RC6 GSC02 Light Jam during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC0500	RC6 GSC05 Light Jam during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC1100	RC6 GSC01 Dark Jam during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC1200	RC6 GSC02 Dark Jam during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC1500	RC6 GSC05 Dark Jam during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC2100	Error occurred by notes remained in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC2200	Error occurred by notes remained in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5DC2500	Error occurred by notes remained in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC3100	Sensor auto calibration error in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC3200	Sensor auto calibration error in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC3500	Sensor auto calibration error in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC4100	Extern lights check error in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC4200	Extern lights check error in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC4500	Extern lights check error in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC5100	Path error on transport path in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC5200	Path error on transport path in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC5500	Path error on transport path in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5DC6100	Path error on sensor except for transport path in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC6200	Path error on sensor except for transport path in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC6500	Path error on sensor except for transport path in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC7100	Error occurred by the notes disorder in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC7200	Error occurred by the notes disorder in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DC7500	Error occurred by the notes disorder in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCG200	RC6 Failure to move PP to stack position during Initialize	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5DCG400	RC6 Failure to upword moving of PP during RC6 stack roller retreat movement during Initialize	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5DCG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCG600	RC6 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5DCG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
5DCGA00	RC6 RC Solenoid Echo error during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
5DCGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5DCGF00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5DCGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5DCGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DCGQ00	RJC Press and Stack position fail during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5DCGR00	RJC Stack position fail during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5DCGS00	RC6 RJC Press position fail during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5DCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5DCGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5DCGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5DCGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5DCGX00	RC6 GSC01 detects notes during RJC intialze during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCJ100	RC6 RJC Full during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5DCJ200	RC6 RC No Residue during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8).5. Fill up the Notes if there are no notes
5DCJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.

Problem Code	Problem Description	Troubleshooting
5DCL100	Remaining notes stack process error in RC6 GSC01 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCL200	Remaining notes stack process error in RC6 GSC02 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCL500	Remaining notes stack process error in RC6 GSC05 during Initialize	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DCLZ00	Remaining notes stack process error in RC6 All during Initialize	1. Operate to initialize BRM.(Recovery)
5DCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCRF00	RC6 Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCRP00	RC6 PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCS200	RC6 Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCS300	RC6 Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCSA00	RC6 Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DCSR00	RC6 Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5DE1500	CST GS905 Dark Jam during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5DE2500	Error occurred by notes remained in CST GS905 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DEG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5DEG200	CST Failure to move PP to stack position during Initialize	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5DEG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Initialize	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5DEG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEG600	CST Stack Roller retreat position disorder during RC Separation during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Initialize	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5DEGA00	CST RC Solenoid Echo error during Initialize	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
5DEGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5DEGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5DEGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.

Problem Code	Problem Description	Troubleshooting
5DEGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEGK00	CST RC Stack Roller retreat fail (Motor speed error) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5DEJ200	CST No Residue during Initialize	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5DEJ300	CST Full,Bottom no detect before move RC PP to stack position during Initialize	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5DEL100	Remaining notes stack process error in CST GS901 during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5DEL200	Remaining notes stack process error in CST GS902 during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5DEL500	Remaining notes stack process error in CST GS905 during Initialize	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5DELZ00	Remaining notes stack process error in CST All during Initialize	1. Operate to initialize BRM.(Recovery)
5DER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5DER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DERF00	CST Feed Motor response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DERP00	CST PP response timeout during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DES200	CST Receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DES300	CST RC Task not for separation receive separation command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DESA00	CST RC Sub Task receive undefined command during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DESR00	CST Sub Task for Wait Setting Error during Initialize	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5DF2500	Error occurred by notes remained in RC7 GSF05 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DF6500	Path error on sensor except for transport path in RC7 GSF05 during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DFG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DFG200	RC7 Failure to move PP to stack position during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5DFG400	RC7 Failure to upward moving of PP during RC7 stack roller retreat movement during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5DFG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5DFG600	RC7 Stack Roller retreat position disorder during RC Separation during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Initialize	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
5DFGA00	RC7 Solenoid Echo error during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
5DFGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5DFGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A).4. Put down the Stage after open the recycle cassette door (A).5. Remove note.
5DFGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A).4. Put down the Stage after open the recycle cassette door (A).5. Remove note.
5DFGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5DFGK00	RC7 Stack Roller retreat fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5DFGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Initialize	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

5E30100	RC3 GS301 Light Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5E30200	RC3 GS302 Light Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E30500	RC3 GS305 Light Jam during Inner Shutter Open	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5E31100	RC3 GS301 Dark Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E31200	RC3 GS302 Dark Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E31500	RC3 GS305 Dark Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E32100	Error occurred by notes remained in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E32200	Error occurred by notes remained in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E32500	Error occurred by notes remained in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E33100	Sensor auto calibration error in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E33200	Sensor auto calibration error in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E33500	Sensor auto calibration error in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5E34100	Extern lights check error in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E34200	Extern lights check error in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E34500	Extern lights check error in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E35100	Path error on transport path in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E35200	Path error on transport path in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E35500	Path error on transport path in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E36100	Path error on sensor except for transport path in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E36200	Path error on sensor except for transport path in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E36500	Path error on sensor except for transport path in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E37100	Error occurred by the notes disorder in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5E37200	Error occurred by the notes disorder in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E37500	Error occurred by the notes disorder in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E3L100	Remaining notes stack process error in RC3 GS301 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E3L200	Remaining notes stack process error in RC3 GS302 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E3L500	Remaining notes stack process error in RC3 GS305 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E40100	RC4 GS401 Light Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E40200	RC4 GS402 Light Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E40500	RC4 GS405 Light Jam during Inner Shutter Open	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).

Problem Code	Problem Description	Troubleshooting
5E41100	RC4 GS401 Dark Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E41200	RC4 GS402 Dark Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E41500	RC4 GS405 Dark Jam during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E42100	Error occurred by notes remained in RC4 GS401 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E42200	Error occurred by notes remained in RC4 GS402 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E42500	Error occurred by notes remained in RC4 GS405 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E43100	Sensor auto calibration error in RC4 GS401 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E43200	Sensor auto calibration error in RC4 GS402 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E43500	Sensor auto calibration error in RC4 GS405 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E44100	Extern lights check error in RC4 GS401 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5E44200	Extern lights check error in RC4 GS402 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5E44500	Extern lights check error in RC4 GS405 during Inner Shutter Open	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

5E5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E62100	CSM Residue Error during Inner Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5E62300	CSM insert notes excess Error during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5E62500	CSM notes disappear Error during Inner Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5E62600	CSM notes appear Error during Inner Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5E62Z00	CSM Residue Error during Inner Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5E6G100	Fail to move CSM BP to Stack Position during Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
5E6G200	Fail to move CSM BP to Deposit Position during Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5E6G600	Fail to move CSM P-Roller to Home position during Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5E6GD00	Fail to move CSM Lift to Up position during Inner Shutter Open	1. Open the upper unit. 2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
5E6GF00	Fail to move CSM G-Roller to Home position during Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5E6GG00	Fail to move both CSM P/G-Roller to Homeposition during Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5E6M200	CSM Inner Shutter Open Error during Inner Shutter Open	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5E6M300	CSM Inner Shutter Close Error during Inner Shutter Open	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5E6M400	CSM Outer Shutter Open Error during Shutter Open	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5E6M500	CSM Outer Shutter Close Error during Shutter Close	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5E6M600	CSM Outer Shutter is Opened during Shutter Close	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5E6M900	CSM Stopper Stack position Fail during Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5E6MC00	CSM Bill Supporter Down position Fail during Inner Shutter Open	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize

Problem Code	Problem Description	Troubleshooting
5E6P200	CSM PP Deposit position Fail during Shutter Open	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5E6P300	CSM PP Separation position Fail during Shutter Open	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5E6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RB00	CSM BP response timeout during Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RF00	CSM Feed Motor response timeout during Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RL00	CSM Lift response timeout during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RP00	CSM PP response timeout during Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RR00	CSM Bill supporter response timeout during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RS00	CSM Inner Shutter response timeout during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6RT00	CSM Stopper response timeout during Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E6SA00	CSM Receive undefined command during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5E6SR00	CSM Sub Task for Wait Setting Error during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E72100	Error occurred by notes remained in TSK GS701 during Inner Shutter Open	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5E72200	Error occurred by notes remained in TSK GS702 during Inner Shutter Open	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5E72300	Error occurred by notes remained in TSK GS703,4 during Inner Shutter Open	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5E72Z00	Error occurred by notes remained in TSK All Sensor during Inner Shutter Open	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5E7C200	TSK Last note unclear during separation during Inner Shutter Open	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
5E7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E8HA01	GS801A Sensor Error during Shutter Open	1. Check GS801A2. Operate to initialize BRM(Recovery)
5E8HA02	GS801B Sensor Error during Shutter Open	1. Check GS801B2. Operate to initialize BRM(Recovery)
5E8HA03	GS801A, GS801B Sensor Error during Shutter Open	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5E8HA04	GS802A Sensor Error during Shutter Open	1. Check GS802A2. Operate to initialize BRM(Recovery)
5E8HA05	GS801A, GS802A Sensor Error during Shutter Open	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5E8HA06	GS801B, GS802A Sensor Error during Shutter Open	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5E8HA07	GS801A, GS801B, GS802A Sensor Error during Shutter Open	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5E8HA08	GS802B Sensor Error during Shutter Open	1. Check GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5E8HA09	GS801A, GS802B Sensor Error during Shutter Open	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5E8HA10	GS801B, GS802B Sensor Error during Shutter Open	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5E8HA11	GS801A, GS801B, GS802B Sensor Error during Shutter Open	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5E8HA12	GS802A, GS802B Sensor Error during Shutter Open	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5E8HA13	GS801A, GS802A, GS802B Sensor Error during Shutter Open	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5E8HA14	GS801B, GS802A, GS802B Sensor Error during Shutter Open	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5E8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Shutter Open	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5E8HB01	MR Sensor Level Error during Shutter Open	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5E8HC02	UV_01 Sensor Level Error during Shutter Open	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5E8HF03	CIS Shading data loading Fail during Shutter Open	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5E8HF04	Detection DB Table loading Fail during Shutter Open	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF05	BC FPGA Data checksum Fail during Shutter Open	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5E8HF06	BC FPGA Configuration Fail during Shutter Open	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5E8HF07	BC FPGA Header Information Loading Fail during Shutter Open	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5E8HF08	BC FPGA Initialize Fail during Shutter Open	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5E8HF09	BC FPGA VERSION Fail during Shutter Open	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5E8HF11	Detection DB #01 loading Fail during Shutter Open	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF12	Detection DB #02 loading Fail during Shutter Open	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF13	Detection DB #03 loading Fail during Shutter Open	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF14	Detection DB #04 loading Fail during Shutter Open	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF15	Detection DB #05 loading Fail during Shutter Open	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5E8HF16	Detection DB #06 loading Fail during Shutter Open	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF17	Detection DB #07 loading Fail during Shutter Open	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF18	Detection DB #08 loading Fail during Shutter Open	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF19	Detection DB #09 loading Fail during Shutter Open	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HF20	Detection DB #10 loading Fail during Shutter Open	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5E8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Shutter Open	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Shutter Open	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG03	BC Transaction Ready Fail When Receive BC READY Command during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5E8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Shutter Open	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Shutter Open	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Shutter Open	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG07	Receive BC Unknown Command during Shutter Open	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5E8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Shutter Open	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Shutter Open	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Shutter Open	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5E8HG11	No Nation Code When Receive BC READY Command during Shutter Open	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Shutter Open	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio

Problem Code	Problem Description	Troubleshooting
5E8HG20	Fail to Initialize CIS When Receive BC READY Command during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5E8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5E8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5E8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5E8HG24	ENCODER Mode Set Error When Receive BC READY Command during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5E8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Shutter Open	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Shutter Open	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Shutter Open	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Shutter Open	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Shutter Open	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Shutter Open	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Shutter Open	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Shutter Open	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Shutter Open	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5E8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Shutter Open	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Shutter Open	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Shutter Open	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Shutter Open	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Shutter Open	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Shutter Open	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Shutter Open	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Shutter Open	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG46	Bill Number Error When Receive Check No Write Command during Shutter Open	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Shutter Open	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Shutter Open	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Shutter Open	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HH01	Fail to Delete NAND FLASH during Shutter Open	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5E8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Shutter Open	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5E8HH03	Fail to Download Detection DB during Shutter Open	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5E8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Shutter Open	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5E8HH05	Detection DB Download File Check Error during Shutter Open	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5E8HH06	Detection DB Download File Size Error during Shutter Open	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5E8HH07	DB Table Save Error After Download Detection DB during Shutter Open	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5E8HH08	Over Detection DB Download (Over 10) during Shutter Open	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5E8HH09	Detection DB Header Information Error during Shutter Open	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5E8HH10	EP Download Fail during Shutter Open	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5E8HH11	EP Download Check Error during Shutter Open	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5E8HH12	EP Download File Size Error during Shutter Open	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5E8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Shutter Open	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5E8HH14	BC FPGA Download Fail during Shutter Open	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5E8HH15	Header Information Save Error After BC FPGA Download during Shutter Open	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5E8HH16	Not Provide BC FPGA Download during Shutter Open	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5E8HH17	EEPROM READ/WRITE Error during Shutter Open	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5E8HH18	Receive Unit Serial Number Undefined Option during Shutter Open	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5E8HH19	Receive USB Undefined Command during Shutter Open	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5E8HH20	No BC Process Note When Receive Image Upload Command during Shutter Open	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH21	FC1 Set Error When Receive Image Upload Command during Shutter Open	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH22	BC is Processing Note When Receive Image Upload Command during Shutter Open	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5E8HH23	FC2 Set Error When Receive Image Upload Command during Shutter Open	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH24	Not Provide Total Image Upload Function during Shutter Open	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5E8HH25	Not Provide Note Number Detection Image Upload Function during Shutter Open	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH26	FC2 Set Error When Receive Image Information Upload Command during Shutter Open	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Shutter Open	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Shutter Open	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Shutter Open	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Shutter Open	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Shutter Open	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Shutter Open	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Shutter Open	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Shutter Open	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5E8HI01	RecogTask Messeage Timeout Error during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5E8HI02	ScanTask Messeage Timeout Error during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5E8HI03	UartTask Messeage Timeout Error during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5E8HI04	BcUsbTask Messeage Timeout Error during Shutter Open	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5E8HJ01	Algorithm Initialize Fail during Shutter Open	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HJ02	Algorithm Ready Fail during Shutter Open	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HJ03	Algorithm Information Set Error during Shutter Open	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5E8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Shutter Open	1. Retry the operation
5E8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Shutter Open	1. Check the number of CST Setting notes info
5E8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Shutter Open	1. Check Withdrawal notes setting
5E8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Shutter Open	1. Check Withdrawal notes info
5E8HS01	FPGA Write Data Error When Initialize Scan Driver during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS05	Not Process Shading When Initialize Scan Driver during Shutter Open	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5E8HS08	Fail to Set DAC When Initialize Scan Driver during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS11	FPGA Write Data Error When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS13	Fail to Set CIS Led On Value When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS14	Fail to Set Source of Scan Ligh When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5E8HS15	Not Process Shading When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS17	Fail to Set AFE Chip When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS18	Fail to Set DAC When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS19	MR/UV/DD Sampling Start Error When BC Ready during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS1A	Fail to Set 2-Notes DAC When BC Ready during Shutter Open	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5E8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Shutter Open	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5E8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS28	Fail to Set DAC When Stop BC during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Shutter Open	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5E8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Shutter Open	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5E8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Shutter Open	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5E8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Shutter Open	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5E8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Shutter Open	1. Retry the operation2. Change BC
5E8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Shutter Open	1. Retry the operation2. Change BC
5E8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Shutter Open	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5E8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Shutter Open	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5E8HS38	Max Ontime Ove When Process CIS Shading – Use in Plant during Shutter Open	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5E8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Shutter Open	1. Retry the operation2. Change BC
5E8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Shutter Open	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC

Problem Code	Problem Description	Troubleshooting
5E8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Shutter Open	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5E8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Shutter Open	1. Retry the operation2. Change BC
5E8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5E8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5EAA100	UTC open Error before operation Inner Shutter Open	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5EAA200	TSK open Error before operation Inner Shutter Open	1. Open the upper unit. 2. Check the TSK open and close
5EAA300	BMU Inter Lock Error before operation Inner Shutter Open	1. Check BMU open and close
5EAA400	BMU open Error before operation Inner Shutter Open	1. Check BMU open and close
5EAA500	Replenishment CST open Error before operation Inner Shutter Open	1. Check the Transit CST installation
5EAA600	CSM open Error before operation Inner Shutter Open	1. Open the upper unit. 2. Check CSM Open/Close
5EAA800	BMD Inter Lock Error before operation Inner Shutter Open	1. Open the lower unit. 2. Check the BMD open and close
5EAA900	BMD open Error before operation Inner Shutter Open	1. Open the lower unit. 2. Check the BMD open and close
5EAAA00	BC Open Error before operation Inner Shutter Open	1. Open the upper unit. 2. Check BC Open/Close
5EAAB00	RC Full Error before operation Inner Shutter Open	1. Open the lower unit. 2. Check RC Full and remove notes
5EAAC00	RJC Full Error before operation Inner Shutter Open	1. Open the upper unit. 2. Check RJC Full and remove notes
5EAAD00	UTC Full Error before operation Inner Shutter Open	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5EAAE00	RTC Full Error before operation Inner Shutter Open	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5EAAF00	RC Empty Error before operation Inner Shutter Open	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5EAAG00	Suspected note RC open Error before operation Inner Shutter Open	1. Open the lower unit. 2. Check the RC removal and reinstall

Problem Code	Problem Description	Troubleshooting
5EAAH00	Status of BMU loading in the BMU Test Mode before the operation during Inner Shutter Open	1. Check Load/Removal of the upper unit 2. Replace a cherry switch when error occurs
5EAE100	Received operation command without Initial Info Set during Inner Shutter Open	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5EAE200	Status on not operation reception command during Inner Shutter Open	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5EAE300	Received operation command without System Info Read during Inner Shutter Open	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5EAE400	Transaction was executed without Initializing after power on during Inner Shutter Open	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5EAEE00	RBU RS485 communication sequence disorder during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred after initialization
5EAEF00	RBU RS485 connection line disorder during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred after initialization
5EAEL00	RBU communication was not ready after power on during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred after initialization
5EAH600	Failure to check clearing NVRAM during Inner Shutter Open	1. Operate to initialize BRM(Recovery)
5EAR100	Message timeout error during operation ready during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5EAR200	Message timeout error during transaction operation during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5EAR300	Message timeout error during error postprocessing during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5EAR800	RBU/BC sensor auto dimming response message timeout error during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5EARC00	BC response message timeout error during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5EARJ00	Message timeout error during Stop Ready during Inner Shutter Open	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5EBH100	RC1 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector 2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH200	RC2 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector 2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5EBH300	RC3 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH400	RC4 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH500	RC5 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH600	RC6 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH700	RC1 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH800	RC2 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBH900	RC3 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBHA00	RC4 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBHB00	RC5 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBHC00	RC6 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBHD00	RC1 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBHE00	RC2 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBHF00	RC3 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBHG00	RC4 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBHH00	RC5 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBHJ00	RC6 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBHK00	BMD Open Error During EEPROM Read/Write during Inner Shutter Open	1. Check the lower Unit load/removal
5EBHU00	BMD EEPROM Read Error during Inner Shutter Open	1. Replace RBU B/D

Problem Code	Problem Description	Troubleshooting
5EBHV00	BMD EEPROM Write Error during Inner Shutter Open	1. Replace RBU B/D
5EBHW00	BMD EEPROM Verify Error during Inner Shutter Open	1. Replace RBU B/D
5EBHX00	RC7 EEPROM Read Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBHY00	RC7 EEPROM Write Error during Inner Shutter Open	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5EBHZ00	RC7 EEPROM Verify Error during Inner Shutter Open	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5EBr000	RBU Response Timeout during Inner Shutter Open	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5F8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Shutter Close	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Shutter Close	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG03	BC Transaction Ready Fail When Receive BC READY Command during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5F8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Shutter Close	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Shutter Close	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Shutter Close	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG07	Receive BC Unknown Command during Shutter Close	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5F8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Shutter Close	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Shutter Close	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Shutter Close	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5F8HG11	No Nation Code When Receive BC READY Command during Shutter Close	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Shutter Close	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5F8HG20	Fail to Initialize CIS When Receive BC READY Command during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5F8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5F8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5F8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5F8HG24	ENCODER Mode Set Error When Receive BC READY Command during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance

Problem Code	Problem Description	Troubleshooting
5F8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Shutter Close	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Shutter Close	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Shutter Close	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Shutter Close	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Shutter Close	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Shutter Close	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Shutter Close	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Shutter Close	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Shutter Close	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Shutter Close	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Shutter Close	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Shutter Close	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Shutter Close	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Shutter Close	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5F8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Shutter Close	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Shutter Close	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Shutter Close	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG46	Bill Number Error When Receive Check No Write Command during Shutter Close	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Shutter Close	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Shutter Close	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Shutter Close	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HH01	Fail to Delete NAND FLASH during Shutter Close	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5F8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Shutter Close	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5F8HH03	Fail to Download Detection DB during Shutter Close	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5F8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Shutter Close	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5F8HH05	Detection DB Download File Check Error during Shutter Close	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5F8HH06	Detection DB Download File Size Error during Shutter Close	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5F8HH07	DB Table Save Error After Download Detection DB during Shutter Close	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5F8HH08	Over Detection DB Download (Over 10) during Shutter Close	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5F8HH09	Detection DB Header Information Error during Shutter Close	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5F8HH10	EP Download Fail during Shutter Close	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5F8HH11	EP Download Check Error during Shutter Close	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5F8HH12	EP Download File Size Error during Shutter Close	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5F8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Shutter Close	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5F8HH14	BC FPGA Download Fail during Shutter Close	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5F8HH15	Header Information Save Error After BC FPGA Download during Shutter Close	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5F8HH16	Not Provide BC FPGA Download during Shutter Close	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5F8HH17	EEPROM READ/WRITE Error during Shutter Close	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5F8HH18	Receive Unit Serial Number Undefined Option during Shutter Close	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5F8HH19	Receive USB Undefined Command during Shutter Close	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5F8HH20	No BC Process Note When Receive Image Upload Command during Shutter Close	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH21	FC1 Set Error When Receive Image Upload Command during Shutter Close	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH22	BC is Processing Note When Receive Image Upload Command during Shutter Close	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH23	FC2 Set Error When Receive Image Upload Command during Shutter Close	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH24	Not Provide Total Image Upload Function during Shutter Close	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
5F8HH25	Not Provide Note Number Detection Image Upload Function during Shutter Close	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH26	FC2 Set Error When Receive Image Information Upload Command during Shutter Close	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Shutter Close	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Shutter Close	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5F8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Shutter Close	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Shutter Close	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Shutter Close	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Shutter Close	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Shutter Close	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Shutter Close	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5F8HI01	RecogTask Messeage Timeout Error during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5F8HI02	ScanTask Messeage Timeout Error during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5F8HI03	UartTask Messeage Timeout Error during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5F8HI04	BcUsbTask Messeage Timeout Error during Shutter Close	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5F8HJ01	Algorithm Initialize Fail during Shutter Close	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HJ02	Algorithm Ready Fail during Shutter Close	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HJ03	Algorithm Information Set Error during Shutter Close	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5F8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Shutter Close	1. Retry the operation
5F8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Shutter Close	1. Check the number of CST Setting notes info
5F8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Shutter Close	1. Check Withdrawal notes setting

Problem Code	Problem Description	Troubleshooting
5F8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Shutter Close	1. Check Withdrawal notes info
5F8HS01	FPGA Write Data Error When Initialize Scan Driver during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS05	Not Process Shading When Initialize Scan Driver during Shutter Close	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5F8HS08	Fail to Set DAC When Initialize Scan Driver during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS11	FPGA Write Data Error When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS13	Fail to Set CIS Led On Value When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS14	Fail to Set Source of Scan Ligh When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS15	Not Process Shading When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS17	Fail to Set AFE Chip When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS18	Fail to Set DAC When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS19	MR/UV/DD Sampling Start Error When BC Ready during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS1A	Fail to Set 2-Notes DAC When BC Ready during Shutter Close	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5F8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Shutter Close	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5F8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS28	Fail to Set DAC When Stop BC during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5F8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Shutter Close	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5F8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Shutter Close	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5F8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Shutter Close	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5F8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Shutter Close	1. Retry the operation2. Check CIS Substance3. Check CIS note quality and setting status4. Check CIS Connection Status5. Change BC
5F8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Shutter Close	1. Retry the operation2. Change BC
5F8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Shutter Close	1. Retry the operation2. Change BC
5F8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Shutter Close	1. Retry the operation2. Check CIS note quality and setting status3. Check CIS Connection Status4. Change BC
5F8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Shutter Close	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5F8HS38	Max Overtime Ove When Process CIS Shading – Use in Plant during Shutter Close	1. Retry the operation2. Check CIS Substance3. Check CIS note quality and setting status4. Check CIS Connection Status5. Change BC
5F8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Shutter Close	1. Retry the operation2. Change BC
5F8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Shutter Close	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5F8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Shutter Close	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5F8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Shutter Close	1. Retry the operation2. Change BC
5F8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5F8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5F8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5F8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5FA2100	Error occurred by notes remained in GS801 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5FA2200	Error occurred by notes remained in GS002 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2300	Error occurred by notes remained in GS003 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2400	Error occurred by notes remained in GS004 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2500	Error occurred by notes remained in GS005 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2600	Error occurred by notes remained in GS006 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2700	Error occurred by notes remained in GS014 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2800	Error occurred by notes remained in GS018 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2900	Error occurred by notes remained in GS020 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2A00	Error occurred by notes remained in GS021 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2C00	Error occurred by notes remained in GS030 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5FA2E00	Error occurred by notes remained in GS001 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2H00	Error occurred by notes remained in GS618 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2J00	Error occurred by notes remained in GS619 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2K00	Error occurred by notes remained in GS701,702 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2M00	Error occurred by notes remained in GSA01 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2N00	Error occurred by notes remained in GSA02 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2P00	Error occurred by notes remained in GSA03 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2Q00	Error occurred by notes remained in GSD01 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FA2W00	Error occurred by notes remained in GS802 during Inner Shutter Close	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5FAA100	UTC open Error before operation Inner Shutter Close	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5FAA200	TSK open Error before operation Inner Shutter Close	1. Open the upper unit. 2. Check the TSK open and close
5FAA300	BMU Inter Lock Error before operation Inner Shutter Close	1. Check BMU open and close

Problem Code	Problem Description	Troubleshooting
5FAA400	BMU open Error before operation Inner Shutter Close	1. Check BMU open and close
5FAA500	Replenishment CST open Error before operation Inner Shutter Close	1. Check the Transit CST installation
5FAA600	CSM open Error before operation Inner Shutter Close	1. Open the upper unit. 2. Check CSM Open/Close
5FAA800	BMD Inter Lock Error before operation Inner Shutter Close	1. Open the lower unit. 2. Check the BMD open and close
5FAA900	BMD open Error before operation Inner Shutter Close	1. Open the lower unit. 2. Check the BMD open and close
5FAAA00	BC Open Error before operation Inner Shutter Close	1. Open the upper unit. 2. Check BC Open/Close
5FAAB00	RC Full Error before operation Inner Shutter Close	1. Open the lower unit. 2. Check RC Full and remove notes
5FAAC00	RJC Full Error before operation Inner Shutter Close	1. Open the upper unit. 2. Check RJC Full and remove notes
5FAAD00	UTC Full Error before operation Inner Shutter Close	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5FAAE00	RTC Full Error before operation Inner Shutter Close	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5FAAF00	RC Empty Error before operation Inner Shutter Close	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5FAAG00	Suspected note RC open Error before operation Inner Shutter Close	1. Open the lower unit. 2. Check the RC removal and reinstall
5FAAH00	Status of BMU loading in the BMU Test Mode before the operation during Inner Shutter Close	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5FAE100	Received operation command without Initial Info Set during Inner Shutter Close	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5FAE200	Status on not operation reception command during Inner Shutter Close	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5FAE300	Received operation command without System Info Read during Inner Shutter Close	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5FAE400	Transaction was executed without Initializing after power on during Inner Shutter Close	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5FAEE00	RBU RS485 communication sequence disorder during Inner Shutter Close	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5FAEF00	RBU RS485 connection line disorder during Inner Shutter Close	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5FAEL00	RBU communication was not ready after power on during Inner Shutter Close	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization

Problem Code	Problem Description	Troubleshooting
5FAH600	Failure to check clearing NVRAM during Inner Shutter Close	1. Operate to initialize BRM(Recovery)
5FAR100	Message timeout error during operation ready during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FAR200	Message timeout error during transaction operation during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FAR300	Message timeout error during error postprocessing during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FAR800	RBU/BC sensor auto dimming response message timeout error during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FARC00	BC response message timeout error during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FARJ00	Message timeout error during Stop Ready during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FBR000	RBU Response Timeout during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FBR700	RBU Response Message Timeout during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FBS100	RBU RS-232 Seq Num Echo Error during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FBS200	RBU RS-232 MI Echo Error during Inner Shutter Close	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5FER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5FER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5FER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5FER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5FUS100	USB Bulk Sequence Error during Shutter Close.	1. Restart over AP-SP
5FUS300	USB Bulk Received Length Error during Shutter Close.	1. Reboot the system
5FUS400	Message transmission Error from USB to Main Task during Shutter Close.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5FUS500	Message reception Error from MainTask to USB during Shutter Close.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5FUSCMD	Bulk command data check error during Shutter Close. (USB communication failure)	1. Restart over AP-SP
5FUSCRC	CRC data check error during Shutter Close. (USB communication failure)	1. Restart over AP-SP
5FUSLEN	Bulk length error during Shutter Close. (USB communication failure)	1. Restart over AP-SP
5GUSCMD	Bulk command data check error during Note Number Read. (USB communication failure)	1. Restart over AP-SP
5GUSCRC	CRC data check error during Note Number Read. (USB communication failure)	1. Restart over AP-SP
5GUSLEN	Bulk length error during Note Number Read. (USB communication failure)	1. Restart over AP-SP
5H1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5H2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H30100	RC3 GS301 Light Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H30200	RC3 GS302 Light Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H30500	RC3 GS305 Light Jam during CST Set Notes Count	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5H31100	RC3 GS301 Dark Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H31200	RC3 GS302 Dark Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H31500	RC3 GS305 Dark Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H32100	Error occurred by notes remained in RC3 GS301 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H32200	Error occurred by notes remained in RC3 GS302 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H32500	Error occurred by notes remained in RC3 GS305 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5H33100	Sensor auto calibration error in RC3 GS301 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H33200	Sensor auto calibration error in RC3 GS302 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H33500	Sensor auto calibration error in RC3 GS305 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H34100	Extern lights check error in RC3 GS301 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H4L200	Remaining notes stack process error in RC4 GS402 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H4L500	Remaining notes stack process error in RC4 GS405 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H50100	RC5 GS501 Light Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H50200	RC5 GS502 Light Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5H50500	RC5 GS505 Light Jam during CST Set Notes Count	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5H51100	RC5 GS501 Dark Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H51200	RC5 GS502 Dark Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H51500	RC5 GS505 Dark Jam during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H52100	Error occurred by notes remained in RC5 GS501 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H52200	Error occurred by notes remained in RC5 GS502 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H52500	Error occurred by notes remained in RC5 GS505 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H53100	Sensor auto calibration error in RC5 GS501 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H53200	Sensor auto calibration error in RC5 GS502 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H53500	Sensor auto calibration error in RC5 GS505 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H54100	Extern lights check error in RC5 GS501 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5H54200	Extern lights check error in RC5 GS502 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H54500	Extern lights check error in RC5 GS505 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H55100	Path error on transport path in RC5 GS501 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H55200	Path error on transport path in RC5 GS502 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H55500	Path error on transport path in RC5 GS505 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H56100	Path error on sensor except for transport path in RC5 GS501 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H56200	Path error on sensor except for transport path in RC5 GS502 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H56500	Path error on sensor except for transport path in RC5 GS505 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H57100	Error occurred by the notes disorder in RC5 GS501 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5H57200	Error occurred by the notes disorder in RC5 GS502 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5H57500	Error occurred by the notes disorder in RC5 GS505 during CST Set Notes Count	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

5H5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during CST Set Notes Count	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5H6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during CST Set Notes Count	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5H6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5H7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H8HA01	GS801A Sensor Error during CST Set Notes Count	1. Check GS801A2. Operate to initialize BRM(Recovery)
5H8HA02	GS801B Sensor Error during CST Set Notes Count	1. Check GS801B2. Operate to initialize BRM(Recovery)
5H8HA03	GS801A, GS801B Sensor Error during CST Set Notes Count	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5H8HA04	GS802A Sensor Error during CST Set Notes Count	1. Check GS802A2. Operate to initialize BRM(Recovery)
5H8HA05	GS801A, GS802A Sensor Error during CST Set Notes Count	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5H8HA06	GS801B, GS802A Sensor Error during CST Set Notes Count	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5H8HA07	GS801A, GS801B, GS802A Sensor Error during CST Set Notes Count	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5H8HA08	GS802B Sensor Error during CST Set Notes Count	1. Check GS802B2. Operate to initialize BRM(Recovery)
5H8HA09	GS801A, GS802B Sensor Error during CST Set Notes Count	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5H8HA10	GS801B, GS802B Sensor Error during CST Set Notes Count	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5H8HA11	GS801A, GS801B, GS802B Sensor Error during CST Set Notes Count	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5H8HA12	GS802A, GS802B Sensor Error during CST Set Notes Count	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5H8HA13	GS801A, GS802A, GS802B Sensor Error during CST Set Notes Count	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5H8HA14	GS801B, GS802A, GS802B Sensor Error during CST Set Notes Count	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5H8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during CST Set Notes Count	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5H8HB01	MR Sensor Level Error during CST Set Notes Count	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5H8HC02	UV_01 Sensor Level Error during CST Set Notes Count	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5H8HF03	CIS Shading data loading Fail during CST Set Notes Count	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5H8HF04	Detection DB Table loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF05	BC FPGA Data checksum Fail during CST Set Notes Count	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5H8HF06	BC FPGA Configuration Fail during CST Set Notes Count	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5H8HF07	BC FPGA Header Information Loading Fail during CST Set Notes Count	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5H8HF08	BC FPGA Initialize Fail during CST Set Notes Count	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5H8HF09	BC FPGA VERSION Fail during CST Set Notes Count	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5H8HF11	Detection DB #01 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF12	Detection DB #02 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF13	Detection DB #03 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF14	Detection DB #04 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF15	Detection DB #05 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF16	Detection DB #06 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF17	Detection DB #07 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF18	Detection DB #08 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF19	Detection DB #09 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HF20	Detection DB #10 loading Fail during CST Set Notes Count	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5H8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during CST Set Notes Count	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during CST Set Notes Count	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG03	BC Transaction Ready Fail When Receive BC READY Command during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5H8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during CST Set Notes Count	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during CST Set Notes Count	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during CST Set Notes Count	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG07	Receive BC Unknown Command during CST Set Notes Count	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5H8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during CST Set Notes Count	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during CST Set Notes Count	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during CST Set Notes Count	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5H8HG11	No Nation Code When Receive BC READY Command during CST Set Notes Count	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during CST Set Notes Count	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5H8HG20	Fail to Initialize CIS When Receive BC READY Command during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5H8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5H8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5H8HG23	DD Sensor DAC Set Error When Receive BC READY Command during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5H8HG24	ENCODER Mode Set Error When Receive BC READY Command during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance

Problem Code	Problem Description	Troubleshooting
5H8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during CST Set Notes Count	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during CST Set Notes Count	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during CST Set Notes Count	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during CST Set Notes Count	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during CST Set Notes Count	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during CST Set Notes Count	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during CST Set Notes Count	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during CST Set Notes Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during CST Set Notes Count	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during CST Set Notes Count	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during CST Set Notes Count	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during CST Set Notes Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during CST Set Notes Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during CST Set Notes Count	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5H8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during CST Set Notes Count	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during CST Set Notes Count	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during CST Set Notes Count	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG46	Bill Number Error When Receive Check No Write Command during CST Set Notes Count	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during CST Set Notes Count	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG48	Bill Number Table CRC Error When Receive Check No Write Command during CST Set Notes Count	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during CST Set Notes Count	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HH01	Fail to Delete NAND FLASH during CST Set Notes Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5H8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during CST Set Notes Count	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5H8HH03	Fail to Download Detection DB during CST Set Notes Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5H8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during CST Set Notes Count	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5H8HH05	Detection DB Download File Check Error during CST Set Notes Count	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5H8HH06	Detection DB Download File Size Error during CST Set Notes Count	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5H8HH07	DB Table Save Error After Download Detection DB during CST Set Notes Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5H8HH08	Over Detection DB Download (Over 10) during CST Set Notes Count	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5H8HH09	Detection DB Header Information Error during CST Set Notes Count	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5H8HH10	EP Download Fail during CST Set Notes Count	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5H8HH11	EP Download Check Error during CST Set Notes Count	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5H8HH12	EP Download File Size Error during CST Set Notes Count	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5H8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during CST Set Notes Count	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5H8HH14	BC FPGA Download Fail during CST Set Notes Count	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5H8HH15	Header Information Save Error After BC FPGA Download during CST Set Notes Count	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5H8HH16	Not Provide BC FPGA Download during CST Set Notes Count	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5H8HH17	EEPROM READ/WRITE Error during CST Set Notes Count	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5H8HH18	Receive Unit Serial Number Undefined Option during CST Set Notes Count	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5H8HH19	Receive USB Undefined Command during CST Set Notes Count	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5H8HH20	No BC Process Note When Receive Image Upload Command during CST Set Notes Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH21	FC1 Set Error When Receive Image Upload Command during CST Set Notes Count	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH22	BC is Processing Note When Receive Image Upload Command during CST Set Notes Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH23	FC2 Set Error When Receive Image Upload Command during CST Set Notes Count	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH24	Not Provide Total Image Upload Function during CST Set Notes Count	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
5H8HH25	Not Provide Note Number Detection Image Upload Function during CST Set Notes Count	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH26	FC2 Set Error When Receive Image Information Upload Command during CST Set Notes Count	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during CST Set Notes Count	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during CST Set Notes Count	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5H8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during CST Set Notes Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during CST Set Notes Count	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during CST Set Notes Count	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during CST Set Notes Count	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during CST Set Notes Count	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during CST Set Notes Count	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5H8HI01	RecogTask Messeage Timeout Error during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5H8HI02	ScanTask Messeage Timeout Error during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5H8HI03	UartTask Messeage Timeout Error during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5H8HI04	BcUsbTask Messeage Timeout Error during CST Set Notes Count	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5H8HJ01	Algorithm Initialize Fail during CST Set Notes Count	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HJ02	Algorithm Ready Fail during CST Set Notes Count	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HJ03	Algorithm Information Set Error during CST Set Notes Count	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5H8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during CST Set Notes Count	1. Retry the operation
5H8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during CST Set Notes Count	1. Check the number of CST Setting notes info
5H8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during CST Set Notes Count	1. Check Withdrawal notes setting

Problem Code	Problem Description	Troubleshooting
5H8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during CST Set Notes Count	1. Check Withdrawal notes info
5H8HS01	FPGA Write Data Error When Initialize Scan Driver during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS05	Not Process Shading When Initialize Scan Driver during CST Set Notes Count	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5H8HS08	Fail to Set DAC When Initialize Scan Driver during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS11	FPGA Write Data Error When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS13	Fail to Set CIS Led On Value When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS14	Fail to Set Source of Scan Ligh When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS15	Not Process Shading When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS17	Fail to Set AFE Chip When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS18	Fail to Set DAC When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS19	MR/UV/DD Sampling Start Error When BC Ready during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS1A	Fail to Set 2-Notes DAC When BC Ready during CST Set Notes Count	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5H8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during CST Set Notes Count	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5H8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS28	Fail to Set DAC When Stop BC during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5H8HS29	MR/UV/DD Sampling Stop Error When Stop BC during CST Set Notes Count	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5H8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during CST Set Notes Count	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5H8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during CST Set Notes Count	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5H8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during CST Set Notes Count	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5H8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during CST Set Notes Count	1. Retry the operation2. Change BC
5H8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during CST Set Notes Count	1. Retry the operation2. Change BC
5H8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during CST Set Notes Count	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5H8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during CST Set Notes Count	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5H8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during CST Set Notes Count	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5H8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during CST Set Notes Count	1. Retry the operation2. Change BC
5H8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during CST Set Notes Count	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5H8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during CST Set Notes Count	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5H8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during CST Set Notes Count	1. Retry the operation2. Change BC
5H8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5H8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HAA100	UTC open Error before operation Set Notes Count	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5HAA200	TSK open Error before operation Set Notes Count	1. Open the upper unit. 2. Check the TSK open and close

Problem Code	Problem Description	Troubleshooting
5HAA300	BMU Inter Lock Error before operation Set Notes Count	1. Check BMU open and close
5HAA400	BMU open Error before operation Set Notes Count	1. Check BMU open and close
5HAA500	Replenishment CST open Error before operation Set Notes Count	1. Check the Transit CST installation
5HAA600	CSM open Error before operation Set Notes Count	1. Open the upper unit. 2. Check CSM Open/Close
5HAA800	BMD Inter Lock Error before operation Set Notes Count	1. Open the lower unit. 2. Check the BMD open and close
5HAA900	BMD open Error before operation Set Notes Count	1. Open the lower unit. 2. Check the BMD open and close
5HAAA00	BC Open Error before operation Set Notes Count	1. Open the upper unit. 2. Check BC Open/Close
5HAAB00	RC Full Error before operation Set Notes Count	1. Open the lower unit. 2. Check RC Full and remove notes
5HAAC00	RJC Full Error before operation Set Notes Count	1. Open the upper unit. 2. Check RJC Full and remove notes
5HAAD00	UTC Full Error before operation Set Notes Count	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5HAAE00	RTC Full Error before operation Set Notes Count	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5HAAF00	RC Empty Error before operation Set Notes Count	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5HAAG00	Suspected note RC open Error before operation Set Notes Count	1. Open the lower unit. 2. Check the RC removal and reinstall
5HAE100	Received operation command without Initial Info Set during Set Notes Count	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5HAE200	Status on not operation reception command during Set Notes Count	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5HAE300	Received operation command without System Info Read during Set Notes Count	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5HAE400	Transaction was executed without Initializing after power on during Set Notes Count	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5HAEEO0	RBU RS485 communication sequence disorder during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5HAEF00	RBU RS485 connection line disorder during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5HAEL00	RBU communication was not ready after power on during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5HAH600	Failure to check clearing NVRAM during Set Notes Count	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5HAS900	RC1 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASA00	RC2 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASB00	RC3 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASC00	RC4 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASD00	RC5 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASE00	RC6 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASF00	UTC received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASG00	RTC received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASH00	Received count coming out from RC1 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASJ00	Received count coming out from RC2 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASK00	Received count coming out from RC3 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASL00	Received count coming out from RC4 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASM00	Received count coming out from RC5 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASN00	Received count coming out from RC6 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASP00	Received count coming out from UTC is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization
5HASQ00	Received count coming out from RTC is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5HASR00	Received count coming out from CST is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HASS00	Error of setting module except RC1~7 and RJC CST during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HAST00	CST received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HASU00	Box set error during Set Notes Count (several box set or no box set)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HASV00	Set cassette with operation mode deposit/withdrawal, withdrawal during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HASW00	Set Count is 0 or 256 exceed during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HASX00	RC7 received denomination is not BRM use denomination during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HASY00	Received count coming out from RC7 is more than Remain count during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HBH100	RC1 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH200	RC2 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH300	RC3 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH400	RC4 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH500	RC5 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH600	RC6 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH700	RC1 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBH800	RC2 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5HBH900	RC3 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBHA00	RC4 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBHB00	RC5 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBHC00	RC6 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBHD00	RC1 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBHE00	RC2 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBHF00	RC3 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBHG00	RC4 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBHH00	RC5 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBHJ00	RC6 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBHK00	BMD Open Error During EEPROM Read/Write during Set Notes Count	1. Check the lower Unit load/removal
5HBHU00	BMD EEPROM Read Error during Set Notes Count	1. Replace RBU B/D
5HBHV00	BMD EEPROM Write Error during Set Notes Count	1. Replace RBU B/D
5HBHW00	BMD EEPROM Verify Error during Set Notes Count	1. Replace RBU B/D
5HBHX00	RC7 EEPROM Read Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBHY00	RC7 EEPROM Write Error during Set Notes Count	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5HBHZ00	RC7 EEPROM Verify Error during Set Notes Count	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5HBR000	RBU Response Timeout during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HBR700	RBU Response Message Timeout during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5HBS100	RBU RS-232 Seq Num Echo Error during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HBS200	RBU RS-232 MI Echo Error during Set Notes Count	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5HEH800	CST EEPROM Write Error during Set Notes Count	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5HEH900	CST EEPROM Read Error during Set Notes Count	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5HER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5J62Z00	CSM Residue Error during during Stop Ready	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5J6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J72100	Error occurred by notes remained in TSK GS701 during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J72200	Error occurred by notes remained in TSK GS702 during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J72300	Error occurred by notes remained in TSK GS703,4 during Stop Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5J72Z00	Error occurred by notes remained in TSK All Sensor during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5J77100	Error occurred by the notes disorder in TSK GS701 during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J77200	Error occurred by the notes disorder in TSK GS702 during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J77300	Error occurred by the notes disorder in TSK GS703,4 during Stop Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5J77Z00	Error occurred by the notes disorder in TSK All during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J7C200	TSK Last note unclear during separation during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J7L100	Remaining notes stack process error in TSK GS701 during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J7L200	Remaining notes stack process error in TSK GS702 during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J7L300	Remaining notes stack process error in TSK GS703,4 during Stop Ready	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5J7LZ00	Remaining notes stack process error in TSK All during Stop Ready	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5J7Q700	TSK Door Open during operation in Stop Ready	1. Close the door of TSK(5)
5J7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7RF00	TSK Feed Motor response timeout in Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5J7RP00	TSK PP response timeout in Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7RT00	TSK Stopper response timeout in Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7S200	TSK Receive undefined command in Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J7SR00	TSK Sub Task for Wait Setting Error in Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8HA01	GS801A Sensor Error during Stop Ready	1. Check GS801A2. Operate to initialize BRM(Recovery)
5J8HA02	GS801B Sensor Error during Stop Ready	1. Check GS801B2. Operate to initialize BRM(Recovery)
5J8HA03	GS801A, GS801B Sensor Error during Stop Ready	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5J8HA04	GS802A Sensor Error during Stop Ready	1. Check GS802A2. Operate to initialize BRM(Recovery)
5J8HA05	GS801A, GS802A Sensor Error during Stop Ready	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5J8HA06	GS801B, GS802A Sensor Error during Stop Ready	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5J8HA07	GS801A, GS801B, GS802A Sensor Error during Stop Ready	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5J8HA08	GS802B Sensor Error during Stop Ready	1. Check GS802B2. Operate to initialize BRM(Recovery)
5J8HA09	GS801A, GS802B Sensor Error during Stop Ready	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5J8HA10	GS801B, GS802B Sensor Error during Stop Ready	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5J8HA11	GS801A, GS801B, GS802B Sensor Error during Stop Ready	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5J8HA12	GS802A, GS802B Sensor Error during Stop Ready	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5J8HA13	GS801A, GS802A, GS802B Sensor Error during Stop Ready	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5J8HA14	GS801B, GS802A, GS802B Sensor Error during Stop Ready	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5J8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Stop Ready	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5J8HB01	MR Sensor Level Error during Stop Ready	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5J8HC02	UV_01 Sensor Level Error during Stop Ready	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5J8HF03	CIS Shading data loading Fail during Stop Ready	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5J8HF04	Detection DB Table loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF05	BC FPGA Data checksum Fail during Stop Ready	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5J8HF06	BC FPGA Configuration Fail during Stop Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5J8HF07	BC FPGA Header Information Loading Fail during Stop Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5J8HF08	BC FPGA Initialize Fail during Stop Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5J8HF09	BC FPGA VERSION Fail during Stop Ready	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5J8HF11	Detection DB #01 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF12	Detection DB #02 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF13	Detection DB #03 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF14	Detection DB #04 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF15	Detection DB #05 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF16	Detection DB #06 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF17	Detection DB #07 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF18	Detection DB #08 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF19	Detection DB #09 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HF20	Detection DB #10 loading Fail during Stop Ready	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5J8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Stop Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Stop Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG03	BC Transaction Ready Fail When Receive BC READY Command during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5J8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Stop Ready	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Stop Ready	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Stop Ready	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG07	Receive BC Unknown Command during Stop Ready	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5J8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Stop Ready	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Stop Ready	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Stop Ready	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5J8HG11	No Nation Code When Receive BC READY Command during Stop Ready	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Stop Ready	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5J8HG20	Fail to Initialize CIS When Receive BC READY Command during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5J8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5J8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5J8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5J8HG24	ENCODER Mode Set Error When Receive BC READY Command during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance

Problem Code	Problem Description	Troubleshooting
5J8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Stop Ready	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Stop Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Stop Ready	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Stop Ready	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Stop Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Stop Ready	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Stop Ready	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Stop Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Stop Ready	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Stop Ready	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Stop Ready	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Stop Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Stop Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Stop Ready	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5J8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Stop Ready	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Stop Ready	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Stop Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG46	Bill Number Error When Receive Check No Write Command during Stop Ready	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Stop Ready	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Stop Ready	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Stop Ready	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HH01	Fail to Delete NAND FLASH during Stop Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5J8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Stop Ready	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5J8HH03	Fail to Download Detection DB during Stop Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5J8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Stop Ready	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5J8HH05	Detection DB Download File Check Error during Stop Ready	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5J8HH06	Detection DB Download File Size Error during Stop Ready	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5J8HH07	DB Table Save Error After Download Detection DB during Stop Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5J8HH08	Over Detection DB Download (Over 10) during Stop Ready	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5J8HH09	Detection DB Header Information Error during Stop Ready	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5J8HH10	EP Download Fail during Stop Ready	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5J8HH11	EP Download Check Error during Stop Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5J8HH12	EP Download File Size Error during Stop Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5J8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Stop Ready	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5J8HH14	BC FPGA Download Fail during Stop Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5J8HH15	Header Information Save Error After BC FPGA Download during Stop Ready	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5J8HH16	Not Provide BC FPGA Download during Stop Ready	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5J8HH17	EEPROM READ/WRITE Error during Stop Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5J8HH18	Receive Unit Serial Number Undefined Option during Stop Ready	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5J8HH19	Receive USB Undefined Command during Stop Ready	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5J8HH20	No BC Process Note When Receive Image Upload Command during Stop Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH21	FC1 Set Error When Receive Image Upload Command during Stop Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH22	BC is Processing Note When Receive Image Upload Command during Stop Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH23	FC2 Set Error When Receive Image Upload Command during Stop Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH24	Not Provide Total Image Upload Function during Stop Ready	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
5J8HH25	Not Provide Note Number Detection Image Upload Function during Stop Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH26	FC2 Set Error When Receive Image Information Upload Command during Stop Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Stop Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Stop Ready	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5J8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Stop Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Stop Ready	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Stop Ready	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Stop Ready	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Stop Ready	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Stop Ready	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5J8HI01	RecogTask Messeage Timeout Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5J8HI02	ScanTask Messeage Timeout Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5J8HI03	UartTask Messeage Timeout Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5J8HI04	BcUsbTask Messeage Timeout Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5J8HJ01	Algorithm Initialize Fail during Stop Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HJ02	Algorithm Ready Fail during Stop Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HJ03	Algorithm Information Set Error during Stop Ready	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5J8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Stop Ready	1. Retry the operation
5J8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Stop Ready	1. Check the number of CST Setting notes info
5J8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Stop Ready	1. Check Withdrawal notes setting

Problem Code	Problem Description	Troubleshooting
5J8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Stop Ready	1. Check Withdrawal notes info
5J8HS01	FPGA Write Data Error When Initialize Scan Driver during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS05	Not Process Shading When Initialize Scan Driver during Stop Ready	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5J8HS08	Fail to Set DAC When Initialize Scan Driver during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS11	FPGA Write Data Error When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS13	Fail to Set CIS Led On Value When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS14	Fail to Set Source of Scan Ligh When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS15	Not Process Shading When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS17	Fail to Set AFE Chip When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS18	Fail to Set DAC When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS19	MR/UV/DD Sampling Start Error When BC Ready during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS1A	Fail to Set 2-Notes DAC When BC Ready during Stop Ready	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5J8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Stop Ready	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5J8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS28	Fail to Set DAC When Stop BC during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5J8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Stop Ready	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5J8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Stop Ready	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5J8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Stop Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5J8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Stop Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5J8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Stop Ready	1. Retry the operation2. Change BC
5J8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Stop Ready	1. Retry the operation2. Change BC
5J8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Stop Ready	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5J8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Stop Ready	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5J8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Stop Ready	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5J8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Stop Ready	1. Retry the operation2. Change BC
5J8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Stop Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5J8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Stop Ready	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5J8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Stop Ready	1. Retry the operation2. Change BC
5J8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8S100	BCU response MI error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8S200	BCU response BCC error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5J8S300	BCU response Sub MI error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8S400	BCU response Parameter error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5J8S900	BCU response Timeout Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JAA100	UTC open Error before operation Stop Ready	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5JAA200	TSK open Error before operation Stop Ready	1. Open the upper unit. 2. Check the TSK open and close
5JAA300	BMU Inter Lock Error before operation Stop Ready	1. Check BMU open and close
5JAA400	BMU open Error before operation Stop Ready	1. Check BMU open and close
5JAA500	Replenishment CST open Error before operation Stop Ready	1. Check the Transit CST installation
5JAA600	CSM open Error before operation Stop Ready	1. Open the upper unit. 2. Check CSM Open/Close
5JAA800	BMD Inter Lock Error before operation Stop Ready	1. Open the lower unit. 2. Check the BMD open and close
5JAA900	BMD open Error before operation Stop Ready	1. Open the lower unit. 2. Check the BMD open and close
5JAAA00	BC Open Error before operation Stop Ready	1. Open the upper unit. 2. Check BC Open/Close
5JAAB00	RC Full Error before operation Stop Ready	1. Open the lower unit. 2. Check RC Full and remove notes
5JAAC00	RJC Full Error before operation Stop Ready	1. Open the upper unit. 2. Check RJC Full and remove notes
5JAAD00	UTC Full Error before operation Stop Ready	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5JAAE00	RTC Full Error before operation Stop Ready	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5JAAF00	RC Empty Error before operation Stop Ready	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5JAAG00	Suspected note RC open Error before operation Stop Ready	1. Open the lower unit. 2. Check the RC removal and reinstall
5JAAJ00	Stop Ready is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5JAE100	Received operation command without Initial Info Set during Stop Ready	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5JAE200	Status on not operation reception command during Stop Ready	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization

Problem Code	Problem Description	Troubleshooting
5JAE300	Received operation command without System Info Read during Stop Ready	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initial Info Set -> Initialization
5JAE400	Transaction was executed without Initializing after power on during Stop Ready	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initial Info Set -> Initialization
5JAEE00	RBU RS485 communication sequence disorder during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5JAEF00	RBU RS485 connection line disorder during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5JAEL00	RBU communication was not ready after power on during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5JAH600	Failure to check clearing NVRAM during Stop Ready	1. Operate to initialize BRM(Recovery)
5JAR100	Message timeout error during operation ready during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JAR200	Message timeout error during transaction operation during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JAR300	Message timeout error during error postprocessing during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JAR800	RBU/BC sensor auto dimming response message timeout error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JARC00	BC response message timeout error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JARJ00	Message timeout error during Stop Ready during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JBR000	RBU Response Timeout during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JBR700	RBU Response Message Timeout during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JBS100	RBU RS-232 Seq Num Echo Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5JBS200	RBU RS-232 MI Echo Error during Stop Ready	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K02400	Error occurred by notes remained in GS004 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02500	Error occurred by notes remained in GS005 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02600	Error occurred by notes remained in GS006 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02700	Error occurred by notes remained in GS014 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02800	Error occurred by notes remained in GS018 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02900	Error occurred by notes remained in GS020 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02A00	Error occurred by notes remained in GS021 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02C00	Error occurred by notes remained in GS030 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02E00	Error occurred by notes remained in GS001 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02H00	Error occurred by notes remained in GS618 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K02J00	Error occurred by notes remained in GS619 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02M00	Error occurred by notes remained in GSA01 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02N00	Error occurred by notes remained in GSA02 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02P00	Error occurred by notes remained in GSA03 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02Q00	Error occurred by notes remained in GSD01 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K02W00	Error occurred by notes remained in GS802 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05100	GS801 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5K05200	GS002 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05300	GS003 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05400	GS004 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K05500	GS005 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05600	GS006 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05700	GS014 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05800	GS018 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05900	GS020 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05A00	GS021 Path error on transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05C00	GS030 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05E00	GS001 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05H00	GS618 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05J00	GS619 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K05M00	GSA01 Path error on transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05N00	GSA02 Path error on transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05P00	GSA03 Path error on transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05Q00	GSD01 Path error on transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K05W00	GS802 Path error on transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06100	GS801 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5K06200	GS002 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06300	GS003 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06400	GS004 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06500	GS005 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K06600	GS006 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06700	GS014 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06800	GS018 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06900	GS020 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06A00	GS021 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06C00	GS030 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06E00	GS001 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06H00	GS618 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06J00	GS619 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06M00	GSA01 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K06N00	GSA02 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06P00	GSA03 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06Q00	GSD01 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K06W00	GS802 Path error on sensor except for transport path during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07100	Error occurred by the notes disorder in GS801 during Withdrawal Reject	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5K07200	Error occurred by the notes disorder in GS002 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07300	Error occurred by the notes disorder in GS003 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07400	Error occurred by the notes disorder in GS004 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07500	Error occurred by the notes disorder in GS005 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07600	Error occurred by the notes disorder in GS006 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K07700	Error occurred by the notes disorder in GS014 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07800	Error occurred by the notes disorder in GS018 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07900	Error occurred by the notes disorder in GS020 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07A00	Error occurred by the notes disorder in GS021 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07C00	Error occurred by the notes disorder in GS030 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07E00	Error occurred by the notes disorder in GS001 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07H00	Error occurred by the notes disorder in GS618 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07J00	Error occurred by the notes disorder in GS619 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07M00	Error occurred by the notes disorder in GSA01 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07N00	Error occurred by the notes disorder in GSA02 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K07P00	Error occurred by the notes disorder in GSA03 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07Q00	Error occurred by the notes disorder in GSD01 during Withdrawal Reject	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5K07W00	Error occurred by the notes disorder in GS802 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K0D100	Reject excess error (continue Reject error) during Withdrawal Reject	1. Check the Rejected denomination during Withdrawal Reject(Including denomination which did not set up in the cassette)
5K0D200	Reject excess error (notes excess error) during Withdrawal Reject	1. Check the Rejected denomination during Withdrawal Reject(Including denomination which did not set up in the cassette)
5K0D300	Reject excess error (Unappointed notes error) during Withdrawal Reject	1. Check the Rejected denomination during Withdrawal Reject(Including denomination which did not set up in the cassette)
5K0D400	Reject excess error (Cassette note error) during Withdrawal Reject	1. Check the Rejected denomination during Withdrawal Reject(Including denomination which did not set up in the cassette)
5K0D500	Reject excess error (2notes) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0D600	Reject excess error (Gap error(1note)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0D700	Reject excess error (Gap error(2notes)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0D800	Reject excess error (skew error) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0D900	Reject excess error (shift error) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0DA00	Reject excess error (Max length error(1note)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0DB00	Reject excess error (Max length error(2notes)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0DC00	Reject excess error (Max length error(3notes)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0DD00	Reject excess error (Max length error(4notes)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM
5K0DE00	Reject excess error (Min length error(1note)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the seperate part status of CSM

Problem Code	Problem Description	Troubleshooting
5K0DF00	Reject excess error (Min length error(2notes)) during Withdrawal Reject	1. Open the upper unit2. Open the CSM shutter3. Check the separate part status of CSM
5K0DG00	Reject excess error (note error) during Withdrawal Reject	1. Check the Rejected denomination during Withdrawal Reject(Including denomination which did not set up in the cassette)
5K0DH00	Reject excess error (MR error) during Withdrawal Reject	1. Check the Rejected Notes during Withdrawal Reject(Failure to Notes recognition)
5K0DJ00	Reject excess error (IR error) during Withdrawal Reject	1. Check the Rejected Notes during Withdrawal Reject(Failure to Notes recognition)
5K0DK00	Reject excess error (Edge error) during Withdrawal Reject	1. Check the Rejected Notes during Withdrawal Reject(Failure to Notes recognition)
5K0DL00	Reject excess error (Image error) during Withdrawal Reject	1. Check the Rejected Notes during Withdrawal Reject(Failure to Notes recognition)
5K0DM00	Reject excess error (UV error) during Withdrawal Reject	1. Check the Rejected Notes during Withdrawal Reject(Failure to Notes recognition)
5K0DN00	Reject excess error (Sensor error) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DO00	Deposit count disallowed notes reject excess error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DP00	Reject excess error (Communication error) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DQ00	Reject excess error (Full & etc) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DR00	Recognition Fail Error (Recognition test fail) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DS00	Recognition Fail Error (No Recognition info) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DT00	Recognition Fail Error (Only STX in Recognition info) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DU00	Recognition Fail Error (Recognition info BCC NG) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DV00	Recognition Fail Error (Recognition info MI NG) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DW00	Recognition Fail Error (Recognition info Index Fail) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DX00	Recognition Fail Error (Info BC Pass Info) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0DY00	Recognition Fail Error (Serial Number Data Format error) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0F100	GM001 motor doesn't operate at a constant speed when the motor works during Withdrawal Reject	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize

Problem Code	Problem Description	Troubleshooting
5K0F200	GM002 motor doesn't operate at a constant speed when the motor works during Withdrawal Reject	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0F400	GM004 motor doesn't operate at a constant speed when the motor works during Withdrawal Reject	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0F600	GM006 motor doesn't operate at a constant speed when the motor works during Withdrawal Reject	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0F700	GM007 motor doesn't operate at a constant speed when the motor works during Withdrawal Reject	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0F900	GM009 motor doesn't operate at a constant speed when the motor works during Withdrawal Reject	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5K0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal Reject	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5K0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal Reject	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal Reject	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal Reject	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5K0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal Reject	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5K0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Withdrawal Reject	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
5K0G100	Failure to 3Way Gate 0 degree mode conversion during Withdrawal Reject	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5K0G200	Failure to 3Way Gate 120 degree mode conversion during Withdrawal Reject	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize

Problem Code	Problem Description	Troubleshooting
5K0GB00	Time Out to 3Way Gate Mode conversion during Withdrawal Reject	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5K0GC00	Failure to RTRJ Gate RJC Mode conversion during Withdrawal Reject	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5K0GD00	Failure to RTRJ Gate RTC Mode conversion during Withdrawal Reject	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5K0K100	Duplication S/N Error during Withdrawal Reject	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5K0N400	Jam Message Receive Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K0NA00	Checksum error when notes separate from TSK during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5K0NC00	length different from separation part to stack part after transport during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K0NK00	BC recognized notes have no cassette to be stacked during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K0Q100	UTC detachment Error during Withdrawal Reject	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5K0Q200	TSK detachment Error during Withdrawal Reject	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5K0Q300	BMU Inter Lock Error during Withdrawal Reject	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5K0Q400	BMU detackment Error during Withdrawal Reject	1. Check Load/Removal of the upper unit
5K0Q500	Replenishment CST detachment Error during Withdrawal Reject	1. Check the safe door open
5K0Q600	CSM detackment Error during Withdrawal Reject	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
5K0Q800	BMD Inter Lock Error during Withdrawal Reject	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5K0Q900	BMD detachment Error during Withdrawal Reject	1. Check the lower Unit load/removal
5K0QA00	BC Open Error during Withdrawal Reject	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5K0QS00	Receive Error Stop CMD during Withdrawal Reject	1. Initialize
5K0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K0SZ00	Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K10100	RC1 GS101 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K10200	RC1 GS102 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K10500	RC1 GS105 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5K10Z00	RC1 All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K11100	RC1 GS101 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K11200	RC1 GS102 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K11500	RC1 GS105 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K11Z00	All RC1 Sensor Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K12100	Error occurred by notes remained in RC1 GS101 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K12200	Error occurred by notes remained in RC1 GS102 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K12500	Error occurred by notes remained in RC1 GS105 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K12Z00	Error occurred by notes remained in All RC1 Sensor during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K13100	RC1 GS101 Sensor auto calibration error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K13200	RC1 GS102 Sensor auto calibration error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K13500	RC1 GS105 Sensor auto calibration error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K13Z00	All RC1 Sensor auto calibration error during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K14100	RC1 GS101 Extern lights check error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K14200	RC1 GS102 Extern lights check error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K14500	RC1 GS105 Extern lights check error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K14Z00	All RC1 Sensor Extern lights check error during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K15100	RC1 GS101 Path error on transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K15200	RC1 GS102 Path error on transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K15500	RC1 GS105 Path error on transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K15Z00	All RC1 Sensor Path error on transport path during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K16100	RC1 GS101 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K16200	RC1 GS102 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K16500	RC1 GS105 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K16Z00	RC1 All Path error on sensor except for transport path during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K17100	Error occurred by the notes disorder in RC1 GS101 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K17200	Error occurred by the notes disorder in RC1 GS102 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K17500	Error occurred by the notes disorder in RC1 GS105 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K17Z00	Error occurred by the notes disorder in RC1 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K1G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K1G200	RC1 Failure to move PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5K1G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5K1G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1G600	RC1 Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5K1GA00	RC1 Solenoid Echo error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
5K1GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K1GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5K1GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5K1GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5K1GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1GK00	RC1 Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K1GQ00	RJC Press and Stack position fail during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5K1GR00	RJC Stack position fail during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5K1GS00	RJC Press position fail during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5K1GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5K1GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5K1GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5K1GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5K1GX00	RC1 GS101 detects notes during RJC intialize during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K1J100	RJC Full during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5K1J200	RC1 No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5K1J300	Full,Bottom no detect before move RC1 PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5K1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1RF00	RC1 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1RP00	RC1 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1S200	RC1 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1S300	RC1 Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1SA00	RC1 Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K1SR00	RC1 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K20100	RC2 GS201 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K20200	RC2 GS202 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K20500	RC2 GS205 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5K20Z00	RC2 All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K21100	RC2 GS201 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K21200	RC2 GS202 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K21500	RC2 GS205 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K21Z00	RC2 All Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K22100	Error occurred by notes remained in RC2 GS201 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K22200	Error occurred by notes remained in RC2 GS202 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K22500	Error occurred by notes remained in RC2 GS205 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K22Z00	Error occurred by notes remained in RC2 All Sensor during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K23100	Sensor auto calibration error in RC2 GS201 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K23200	Sensor auto calibration error in RC2 GS202 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K23500	Sensor auto calibration error in RC2 GS205 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K23Z00	Sensor auto calibration error in RC2 All Sensor during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K24100	Extern lights check error in RC2 GS201 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K24200	Extern lights check error in RC2 GS202 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K24500	Extern lights check error in RC2 GS205 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K24Z00	Extern lights check error in RC2 All Sensor during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K25100	Path error on transport path in RC2 GS201 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K25200	Path error on transport path in RC2 GS202 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K25500	Path error on transport path in RC2 GS205 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K25Z00	Path error on transport path in RC2 All Sensor during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K26100	Path error on sensor except for transport path in RC2 GS201 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K26200	Path error on sensor except for transport path in RC2 GS202 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K26500	Path error on sensor except for transport path in RC2 GS205 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K26Z00	Path error on sensor except for transport path in RC2 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K27100	Error occurred by the notes disorder in RC2 GS201 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K27200	Error occurred by the notes disorder in RC2 GS202 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K27500	Error occurred by the notes disorder in RC2 GS205 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K27Z00	Error occurred by the notes disorder in RC2 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K2G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K2G200	RC2 Failure to move PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
5K2G400	RC2 Failure to upword moving of PP during RC2 stack roller retreat movement during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
5K2G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2G600	RC2 Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5K2G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5K2GA00	RC2 Solenoid Echo error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5K2GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K2GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5K2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5K2GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2GK00	RC2 Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5K2GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K2J200	RC2 No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B)5. Fill up the Notes if there are no notes
5K2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5K2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2RF00	RC2 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2RP00	RC2 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2S200	RC2 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2S300	RC2 Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2SA00	RC2 Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K2SR00	RC2 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K30100	RC3 GS301 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K30200	RC3 GS302 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K30500	RC3 GS305 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5K30Z00	RC3 All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K31100	RC3 GS301 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K31200	RC3 GS302 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K31500	RC3 GS305 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K3GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K3GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K3GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5K3GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5K3GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K3GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K3GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K3GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5K3GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K3J200	RC3 No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C)5. Fill up the Notes if there are no notes
5K3J300	RC3 Full, Bottom no detect before move RC PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
5K3L100	Remaining notes stack process error in RC3 GS301 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K3L200	Remaining notes stack process error in RC3 GS302 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K3L500	Remaining notes stack process error in RC3 GS305 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3RF00	RC3 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3RP00	RC3 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3S200	RC3 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K3S300	RC3 RC Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3SA00	RC3 RC Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K3SR00	RC3 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K40100	RC4 GS401 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K40200	RC4 GS402 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K40500	RC4 GS405 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5K40Z00	RC4 All Sensor Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K41100	RC4 GS401 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K41200	RC4 GS402 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K41500	RC4 GS405 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K41Z00	RC4 All Sensor Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K42100	Error occurred by notes remained in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K42200	Error occurred by notes remained in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K42500	Error occurred by notes remained in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K42Z00	Error occurred by notes remained in RC4 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K43100	Sensor auto calibration error in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K43200	Sensor auto calibration error in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K43500	Sensor auto calibration error in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K43Z00	Sensor auto calibration error in RC4 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K44100	Extern lights check error in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K44200	Extern lights check error in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K44500	Extern lights check error in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K44Z00	Extern lights check error in RC4 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K45100	Path error on transport path in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K45200	Path error on transport path in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K45500	Path error on transport path in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K45Z00	Path error on transport path in RC4 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K46100	Path error on sensor except for transport path in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K46200	Path error on sensor except for transport path in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K46500	Path error on sensor except for transport path in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K46Z00	Path error on sensor except for transport path in RC4 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K47100	Error occurred by the notes disorder in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K47200	Error occurred by the notes disorder in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K47500	Error occurred by the notes disorder in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K47Z00	Error occurred by the notes disorder in RC4 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K4G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K4G200	RC4 Failure to move PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5K4G400	RC4 Failure to upword moving of PP during RC4 stack roller retreat movement during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5K4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4G600	RC4 Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5K4GA00	RC4 RC Solenoid Echo error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
5K4GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K4GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5K4GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5K4GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5K4GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K4J200	RC4 No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D).5. Fill up the Notes if there are no notes
5K4J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
5K4L100	Remaining notes stack process error in RC4 GS401 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K4L200	Remaining notes stack process error in RC4 GS402 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K4L500	Remaining notes stack process error in RC4 GS405 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4RF00	RC4 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4RP00	RC4 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4S200	RC4 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4S300	RC4 RC Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4SA00	RC4 RC Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K4SR00	RC4 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K50100	RC5 GS501 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K50200	RC5 GS502 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K50500	RC5 GS505 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5K50Z00	RC5 All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K51100	RC5 GS501 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K51200	RC5 GS502 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K51500	RC5 GS505 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K51Z00	RC5 All Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K52100	Error occurred by notes remained in RC5 GS501 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K54Z00	Extern lights check error in RC5 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5K55100	Path error on transport path in RC5 GS501 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K55200	Path error on transport path in RC5 GS502 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K55500	Path error on transport path in RC5 GS505 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K55Z00	Path error on transport path in RC5 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K56100	Path error on sensor except for transport path in RC5 GS501 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K56200	Path error on sensor except for transport path in RC5 GS502 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K56500	Path error on sensor except for transport path in RC5 GS505 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K56Z00	Path error on sensor except for transport path in RC5 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5K57100	Error occurred by the notes disorder in RC5 GS501 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K57200	Error occurred by the notes disorder in RC5 GS502 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K57500	Error occurred by the notes disorder in RC5 GS505 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K57Z00	Error occurred by the notes disorder in RC5 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5K5G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K5G200	RC5 Failure to move PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
5K5G400	RC5 Failure to upward moving of PP during RC5 stack roller retreat movement during Withdrawal Reject	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.
5K5G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5G600	RC5 Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
5K5GA00	RC5 Solenoid Echo error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
5K5GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K5GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5K5GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5K5GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5GK00	RC5 Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5K5J200	RC5 No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E)5. Fill up the Notes if there are no notes
5K5J300	RC5 Full,Bottom no detect before move RC PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
5K5L100	Remaining notes stack process error in RC5 GS501 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K5L200	Remaining notes stack process error in RC5 GS502 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5K5L500	Remaining notes stack process error in RC5 GS505 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5RF00	RC5 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5RP00	RC5 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5S200	RC5 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5S300	RC5 Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5SA00	RC5 Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K5SR00	RC5 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K61H00	GS618/619 Dark Jam error during Withdrawal Reject.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K62100	CSM Residue Error during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5K62300	CSM insert notes excess Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5K62500	CSM notes disappear Error during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5K62600	CSM notes appear Error during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5K62Z00	CSM Residue Error during during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6B100	CSM Notes insert position Error during Withdrawal Reject	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
5K6B200	CSM Notes in abnormal position(GS601,GS603,GS610,GS611,GS616 등) after ready separation during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6B300	CSM Separate Mis-pickup during Withdrawal Reject	1. Return Notes to customer(Semi OK Code)2. If Notes don't retrun open the outer/inner Shutter and remove the notes
5K6B400	CSM Separate disorder Jam (Front Skew) during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6B600	CSM Separate disorder Jam (Over Max Length) during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6B700	CSM Separate disorder Jam (Less Min Length) during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6B800	CSM Separate disorder Dark Jam during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6B900	CSM Low speed control 30 times over Error during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6BA00	CSM Over separation notes during collect lost notes during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6BE00	CSM Residue Notes in separation part after separation during Withdrawal Reject	1. Open the upper unit2. Open the outer/inner Shutter of CSM(1)3. Remove notes and substance in the CSM(1)4. Check whether the sensor is contaminated or not if there are No notes or substance
5K6G100	Fail to move CSM BP to Stack Position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
5K6G200	Fail to move CSM BP to Deposit Position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5K6G300	Fail to move CSM BP to Separation Position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5K6G500	Fail to move CSM BP to Note-Out Position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5K6G600	Fail to move CSM P-Roller to Home position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5K6G800	Fail to CSM return notes during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5K6G900	CSM GM601 Step out during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5K6GA00	Fail to move CSM BP to return note Position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5K6GB00	Fail to move CSM FP to Deposit Position during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5K6GF00	Fail to move CSM G-Roller to Homeposition during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5K6GG00	Fail to move both CSM P/G-Roller to Homeposition during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5K6M200	CSM Inner Shutter Open Error during Withdrawal Reject	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5K6M300	CSM Inner Shutter Close Error during Withdrawal Reject	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5K6M400	CSM Outer Shutter Open Error during Withdrawal Reject	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
5K6M500	CSM Outer Shutter Close Error during Withdrawal Reject	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5K6M600	CSM Outer Shutter is Opened during Withdrawal Reject	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5K6M700	CSM Inner Shutter Open during Stack during Withdrawal Reject	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5K6M800	CSM Stopper Home position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5K6M900	CSM Stopper Stack position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5K6MB00	CSM Bill Supporter Up position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5K6MC00	CSM Bill Supporter Down position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5K6P100	CSM PP Withdrawal(Stack) position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6P200	CSM PP Deposit position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6P300	CSM PP Separation position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6P400	CSM PP collect lost notes position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5K6P500	CSM PP Note-out position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6P600	CSM PP Note-arrange position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6P800	CSM PP Control Stack Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6P900	CSM PP Return note position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6PD00	CSM PP Check semi-note Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Withdrawal Reject	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5K6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6RB00	CSM BP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K6RF00	CSM Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6RL00	CSM Lift response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6RP00	CSM PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6RR00	CSM Bill supporter response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6RS00	CSM Inner Shutter response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6RT00	CSM Stopper response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6SA00	CSM Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K6SR00	CSM Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K70100	TSK GS701 Light Jam during Withdrawal Reject	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5K70200	TSK GS702 Light Jam during Withdrawal Reject	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5K70300	TSK GS703,4 Light Jam during Withdrawal Reject	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5K70900	GS020 Light Jam error during Withdrawal Rejectl(TSK motor Step out)	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5K70Z00	TSK All Light Jam during Withdrawal Reject	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5K71100	TSK GS701 Dark Jam during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K71200	TSK GS702 Dark Jam during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5K71300	TSK GS703,4 Dark Jam during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K71Z00	TSK All Dark Jam during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K72100	Error occurred by notes remained in TSK GS701 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K72200	Error occurred by notes remained in TSK GS702 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K72300	Error occurred by notes remained in TSK GS703,4 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K72Z00	Error occurred by notes remained in TSK All Sensor during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K77100	Error occurred by the notes disorder in TSK GS701 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K77200	Error occurred by the notes disorder in TSK GS702 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K77300	Error occurred by the notes disorder in TSK GS703,4 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K77Z00	Error occurred by the notes disorder in TSK All during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7B200	Note detected in TSK Entry After Separate Ready during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7B300	TSK GM701 motor status change failed(Timeout exceeded) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7C100	TSK Miss-pickup during separation during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber

Problem Code	Problem Description	Troubleshooting
5K7C200	TSK Last note unclear during separation during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7C300	TSK Last note No front detect during separataion during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7C400	TSK Last note No rear detect during separataion during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7C500	TSK Max Length NG occur 10 times Dark Jam during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5K7C600	TSK Max length note stucked in entry Light Jam during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7C700	TSK Light Jam Retry Over Error during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Withdrawal Reject	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5K7C900	TSK Low speed control 30 times over Error during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5K7CA00	TSK Incounted note is not Outcounted for 500ms during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7F100	TSK GM701 stepout during separation during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
5K7F300	TSK GM701 F-Roller Homeposition fail during Withdrawal Reject	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
5K7G100	GM701 Return notes fail during Withdrawal Reject	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
5K7J100	TSK Full during Withdrawal Reject	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
5K7J200	TSK Empty during ready separation during Withdrawal Reject	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK

Problem Code	Problem Description	Troubleshooting
5K7L100	Remaining notes stack process error in TSK GS701 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7L200	Remaining notes stack process error in TSK GS702 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7L300	Remaining notes stack process error in TSK GS703,4 during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7LZ00	Remaining notes stack process error in TSK All during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5K7M100	TSK Stopper Home position for intialize fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5K7M200	TSK Stopper Stack position for intialize fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5K7M300	TSK Stopper Return note position for intialize fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5K7M400	TSK Stopper Lock FP Fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5K7M500	TSK Stopper Unlock FP Fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5K7P100	FP Sensor detect Dark Fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5K7P200	FP Sensor detect Light Fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5K7P300	PP Press position fail during Withdrawal Reject	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
5K7Q700	TSK Door Open during operation in Withdrawal Reject	1. Close the door of TSK(5)
5K7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7RF00	TSK Feed Motor response timeout in Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7RP00	TSK PP response timeout in Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7RT00	TSK Stopper response timeout in Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7S200	TSK Receive undefined command in Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K7SR00	TSK Sub Task for Wait Setting Error in Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8HA01	GS801A Sensor Error during Withdrawal Reject	1. Check GS801A2. Operate to initialize BRM(Recovery)
5K8HA02	GS801B Sensor Error during Withdrawal Reject	1. Check GS801B2. Operate to initialize BRM(Recovery)
5K8HA03	GS801A, GS801B Sensor Error during Withdrawal Reject	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5K8HA04	GS802A Sensor Error during Withdrawal Reject	1. Check GS802A2. Operate to initialize BRM(Recovery)
5K8HA05	GS801A, GS802A Sensor Error during Withdrawal Reject	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5K8HA06	GS801B, GS802A Sensor Error during Withdrawal Reject	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5K8HA07	GS801A, GS801B, GS802A Sensor Error during Withdrawal Reject	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5K8HA08	GS802B Sensor Error during Withdrawal Reject	1. Check GS802B2. Operate to initialize BRM(Recovery)
5K8HA09	GS801A, GS802B Sensor Error during Withdrawal Reject	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5K8HA10	GS801B, GS802B Sensor Error during Withdrawal Reject	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5K8HA11	GS801A, GS801B, GS802B Sensor Error during Withdrawal Reject	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5K8HA12	GS802A, GS802B Sensor Error during Withdrawal Reject	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5K8HA13	GS801A, GS802A, GS802B Sensor Error during Withdrawal Reject	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5K8HA14	GS801B, GS802A, GS802B Sensor Error during Withdrawal Reject	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5K8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Withdrawal Reject	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5K8HB01	MR Sensor Level Error during Withdrawal Reject	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5K8HC02	UV_01 Sensor Level Error during Withdrawal Reject	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5K8HF03	CIS Shading data loading Fail during Withdrawal Reject	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5K8HF04	Detection DB Table loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF05	BC FPGA Data checksum Fail during Withdrawal Reject	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5K8HF06	BC FPGA Configuration Fail during Withdrawal Reject	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5K8HF07	BC FPGA Header Information Loading Fail during Withdrawal Reject	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5K8HF08	BC FPGA Initialize Fail during Withdrawal Reject	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5K8HF09	BC FPGA VERSION Fail during Withdrawal Reject	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5K8HF11	Detection DB #01 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF12	Detection DB #02 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF13	Detection DB #03 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF14	Detection DB #04 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF15	Detection DB #05 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF16	Detection DB #06 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF17	Detection DB #07 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF18	Detection DB #08 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF19	Detection DB #09 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HF20	Detection DB #10 loading Fail during Withdrawal Reject	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5K8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Withdrawal Reject	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5K8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Withdrawal Reject	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG03	BC Transaction Ready Fail When Receive BC READY Command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5K8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Withdrawal Reject	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Withdrawal Reject	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Withdrawal Reject	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG07	Receive BC Unknown Command during Withdrawal Reject	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5K8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Withdrawal Reject	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Withdrawal Reject	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Withdrawal Reject	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5K8HG11	No Nation Code When Receive BC READY Command during Withdrawal Reject	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Withdrawal Reject	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5K8HG20	Fail to Initialize CIS When Receive BC READY Command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5K8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5K8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
5K8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5K8HG24	ENCODER Mode Set Error When Receive BC READY Command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5K8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Withdrawal Reject	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Withdrawal Reject	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Withdrawal Reject	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Withdrawal Reject	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Withdrawal Reject	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Withdrawal Reject	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Withdrawal Reject	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Withdrawal Reject	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Withdrawal Reject	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Withdrawal Reject	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Withdrawal Reject	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Withdrawal Reject	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5K8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Withdrawal Reject	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Withdrawal Reject	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Withdrawal Reject	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Withdrawal Reject	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Withdrawal Reject	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG46	Bill Number Error When Receive Check No Write Command during Withdrawal Reject	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Withdrawal Reject	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Withdrawal Reject	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Withdrawal Reject	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HH01	Fail to Delete NAND FLASH during Withdrawal Reject	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5K8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Withdrawal Reject	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5K8HH03	Fail to Download Detection DB during Withdrawal Reject	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5K8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Withdrawal Reject	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5K8HH05	Detection DB Download File Check Error during Withdrawal Reject	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5K8HH06	Detection DB Download File Size Error during Withdrawal Reject	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5K8HH07	DB Table Save Error After Download Detection DB during Withdrawal Reject	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5K8HH08	Over Detection DB Download (Over 10) during Withdrawal Reject	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5K8HH09	Detection DB Header Information Error during Withdrawal Reject	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5K8HH10	EP Download Fail during Withdrawal Reject	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5K8HH11	EP Download Check Error during Withdrawal Reject	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5K8HH12	EP Download File Size Error during Withdrawal Reject	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5K8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Withdrawal Reject	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5K8HH14	BC FPGA Download Fail during Withdrawal Reject	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5K8HH15	Header Information Save Error After BC FPGA Download during Withdrawal Reject	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5K8HH16	Not Provide BC FPGA Download during Withdrawal Reject	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5K8HH17	EEPROM READ/WRITE Error during Withdrawal Reject	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5K8HH18	Receive Unit Serial Number Undefined Option during Withdrawal Reject	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5K8HH19	Receive USB Undefined Command during Withdrawal Reject	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5K8HH20	No BC Process Note When Receive Image Upload Command during Withdrawal Reject	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH21	FC1 Set Error When Receive Image Upload Command during Withdrawal Reject	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH22	BC is Processing Note When Receive Image Upload Command during Withdrawal Reject	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH23	FC2 Set Error When Receive Image Upload Command during Withdrawal Reject	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH24	Not Provide Total Image Upload Function during Withdrawal Reject	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5K8HH25	Not Provide Note Number Detection Image Upload Function during Withdrawal Reject	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH26	FC2 Set Error When Receive Image Information Upload Command during Withdrawal Reject	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5K8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Withdrawal Reject	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Withdrawal Reject	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Reject	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Reject	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Reject	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Reject	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Withdrawal Reject	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Withdrawal Reject	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5K8HI01	RecogTask Messeage Timeout Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5K8HI02	ScanTask Messeage Timeout Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5K8HI03	UartTask Messeage Timeout Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5K8HI04	BcUsbTask Messeage Timeout Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5K8HJ01	Algorithm Initialize Fail during Withdrawal Reject	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HJ02	Algorithm Ready Fail during Withdrawal Reject	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HJ03	Algorithm Information Set Error during Withdrawal Reject	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5K8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Withdrawal Reject	1. Retry the operation

Problem Code	Problem Description	Troubleshooting
5K8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Withdrawal Reject	1. Check the number of CST Setting notes info
5K8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Withdrawal Reject	1. Check Withdrawal notes setting
5K8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Withdrawal Reject	1. Check Withdrawal notes info
5K8HS01	FPGA Write Data Error When Initialize Scan Driver during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS05	Not Process Shading When Initialize Scan Driver during Withdrawal Reject	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5K8HS08	Fail to Set DAC When Initialize Scan Driver during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS11	FPGA Write Data Error When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS13	Fail to Set CIS Led On Value When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS14	Fail to Set Source of Scan Ligh When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS15	Not Process Shading When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS17	Fail to Set AFE Chip When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS18	Fail to Set DAC When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS19	MR/UV/DD Sampling Start Error When BC Ready during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS1A	Fail to Set 2-Notes DAC When BC Ready during Withdrawal Reject	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5K8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Withdrawal Reject	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5K8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS28	Fail to Set DAC When Stop BC during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Withdrawal Reject	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5K8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Withdrawal Reject	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5K8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Withdrawal Reject	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5K8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Withdrawal Reject	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5K8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Withdrawal Reject	1. Retry the operation2. Change BC
5K8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Withdrawal Reject	1. Retry the operation2. Change BC
5K8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Withdrawal Reject	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5K8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Withdrawal Reject	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5K8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Withdrawal Reject	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5K8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Withdrawal Reject	1. Retry the operation2. Change BC
5K8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Withdrawal Reject	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5K8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Withdrawal Reject	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5K8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Withdrawal Reject	1. Retry the operation2. Change BC
5K8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5K8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8S100	BCU response MI error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8S200	BCU response BCC error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8S300	BCU response Sub MI error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8S400	BCU response Parameter error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5K8S900	BCU response Timeout Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KA2100	Error occurred by notes remained in GS801 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2200	Error occurred by notes remained in GS002 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2300	Error occurred by notes remained in GS003 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2400	Error occurred by notes remained in GS004 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2500	Error occurred by notes remained in GS005 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2600	Error occurred by notes remained in GS006 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5KA2700	Error occurred by notes remained in GS014 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2800	Error occurred by notes remained in GS018 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2900	Error occurred by notes remained in GS020 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2A00	Error occurred by notes remained in GS021 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2E00	Error occurred by notes remained in GS001 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2H00	Error occurred by notes remained in GS618 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2J00	Error occurred by notes remained in GS619 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2K00	Error occurred by notes remained in GS701,702 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2M00	Error occurred by notes remained in GSA01 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5). Open the BC(3) and TOP Transport(4). Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5KA2N00	Error occurred by notes remained in GSA02 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2P00	Error occurred by notes remained in GSA03 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2Q00	Error occurred by notes remained in GSD01 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KA2W00	Error occurred by notes remained in GS802 during Withdrawal Reject	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5KAA100	UTC open Error before operation Withdrawal Reject	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5KAA200	TSK open Error before operation Withdrawal Reject	1. Open the upper unit. 2. Check the TSK open and close
5KAA300	BMU Inter Lock Error before operation Withdrawal Reject	1. Check BMU open and close
5KAA400	BMU open Error before operation Withdrawal Reject	1. Check BMU open and close
5KAA500	Replenishment CST open Error before operation Withdrawal Reject	1. Check the Transit CST installation
5KAA600	CSM open Error before operation Withdrawal Reject	1. Open the upper unit. 2. Check CSM Open/Close
5KAA800	BMD Inter Lock Error before operation Withdrawal Reject	1. Open the lower unit. 2. Check the BMD open and close
5KAA900	BMD open Error before operation Withdrawal Reject	1. Open the lower unit. 2. Check the BMD open and close
5KAAA00	BC Open Error before operation Withdrawal Reject	1. Open the upper unit. 2. Check BC Open/Close
5KAAB00	RC Full Error before operation Withdrawal Reject	1. Open the lower unit. 2. Check RC Full and remove notes
5KAAC00	RJC Full Error before operation Withdrawal Reject	1. Open the upper unit. 2. Check RJC Full and remove notes
5KAAD00	UTC Full Error before operation Withdrawal Reject	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5KAAE00	RTC Full Error before operation Withdrawal Reject	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5KAAF00	RC Empty Error before operation Withdrawal Reject	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC

Problem Code	Problem Description	Troubleshooting
5KAAG00	Suspected note RC open Error before operation Withdrawal Reject	1. Open the lower unit. 2. Check the RC removal and reinstall
5KAAJ00	Withdrawal Reject is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5KAAL00	Selected RC Cassette during withdrawal Reject Error before operation Withdrawal Reject	1. Open the lower unit2. Check status of RC (Note Used, Failure Status)3.Operate to initialize BRM(Recovery)
5KAE100	Received operation command without Initial Info Set during Withdrawal Reject	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5KAE200	Status on not operation reception command during Withdrawal Reject	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5KAE300	Received operation command without System Info Read during Withdrawal Reject	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5KAE400	Transaction was executed without Initializing after power on during Withdrawal Reject	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5KAEE00	RBU RS485 communication sequence disorder during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5KAEF00	RBU RS485 connection line disorder during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5KAEL00	RBU communication was not ready after power on during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5KAH600	Failure to check clearing NVRAM during Withdrawal Reject	1. Operate to initialize BRM(Recovery)
5KAHF00	Transaction count exists but GS801A sensor no change during Withdrawal Reject	1. Check GS801A2. Operate to initialize BRM(Recovery)
5KAHG00	Transaction count exists but GS801B sensor no change during Withdrawal Reject	1. Check GS801B2. Operate to initialize BRM(Recovery)
5KAHH00	Transaction count exists but GS802A sensor no change during Withdrawal Reject	1. Check GS802A2. Operate to initialize BRM(Recovery)
5KAHJ00	Transaction count exists but GS802B sensor no change during Withdrawal Reject	1. Check GS802B2. Operate to initialize BRM(Recovery)
5KAR100	Message timeout error during operation ready during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KAR200	Message timeout error during transation operation during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KAR300	Message timeout error during error postprocessing during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KAR800	RBU/BC sensor auto dimming response message timeout error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5KARC00	BC response message timeout error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KARJ00	Message timeout error during Stop Ready during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KAS800	RC is not in use during Replenishment (Not for Deposit or Error occurred) during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KAS900	Reject CST Set Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KASM00	Reject Stack Cassette breakdown during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KBH100	RC1 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH200	RC2 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH300	RC3 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH400	RC4 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH500	RC5 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH600	RC6 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH700	RC1 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH800	RC2 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBH900	RC3 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBHA00	RC4 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBHB00	RC5 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5KBHC00	RC6 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBHD00	RC1 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBHE00	RC2 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBHF00	RC3 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBHG00	RC4 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBHH00	RC5 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBHJ00	RC6 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBHK00	BMD Open Error During EEPROM Read/Write during Withdrawal Reject	1. Check the lower Unit load/removal
5KBHU00	BMD EEPROM Read Error during Withdrawal Reject	1. Replace RBU B/D
5KBHV00	BMD EEPROM Write Error during Withdrawal Reject	1. Replace RBU B/D
5KBHW00	BMD EEPROM Verify Error during Withdrawal Reject	1. Replace RBU B/D
5KBHX00	RC7 EEPROM Read Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBHY00	RC7 EEPROM Write Error during Withdrawal Reject	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5KBHZ00	RC7 EEPROM Verify Error during Withdrawal Reject	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5KBR000	RBU Response Timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KBR700	RBU Response Message Timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KBS100	RBU RS-232 Seq Num Echo Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KBS200	RBU RS-232 MI Echo Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KBSS00	RBU Auto Calibration Command Parameter Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5KC0100	RC6 GSC01 Light Jam during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC0200	RC6 GSC02 Light Jam during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC0500	RC6 GSC05 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(8)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5KC0Z00	RC6 All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KC1100	RC6 GSC01 Dark Jam during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC1200	RC6 GSC02 Dark Jam during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC1500	RC6 GSC05 Dark Jam during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC1Z00	RC6 All Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KC2100	Error occurred by notes remained in RC6 GSC01 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC2200	Error occurred by notes remained in RC6 GSC02 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC2500	Error occurred by notes remained in RC6 GSC05 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC2Z00	Error occurred by notes remained in RC6 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5KC3100	Sensor auto calibration error in RC6 GSC01 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC3200	Sensor auto calibration error in RC6 GSC02 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC3500	Sensor auto calibration error in RC6 GSC05 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC3Z00	Sensor auto calibration error in RC6 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KC4100	Extern lights check error in RC6 GSC01 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC4200	Extern lights check error in RC6 GSC02 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC4500	Extern lights check error in RC6 GSC05 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC4Z00	Extern lights check error in RC6 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KC5100	Path error on transport path in RC6 GSC01 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC5200	Path error on transport path in RC6 GSC02 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC5500	Path error on transport path in RC6 GSC05 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC5Z00	Path error on transport path in RC6 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5KC6100	Path error on sensor except for transport path in RC6 GSC01 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC6200	Path error on sensor except for transport path in RC6 GSC02 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC6500	Path error on sensor except for transport path in RC6 GSC05 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC6Z00	Path error on sensor except for transport path in RC6 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KC7100	Error occurred by the notes disorder in RC6 GSC01 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC7200	Error occurred by the notes disorder in RC6 GSC02 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC7500	Error occurred by the notes disorder in RC6 GSC05 during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KC7Z00	Error occurred by the notes disorder in RC6 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KCG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KCG200	RC6 Failure to move PP to stack position during Withdrawal Reject	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5KCG400	RC6 Failure to upward moving of PP during RC6 stack roller retreat movement during Withdrawal Reject	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5KCG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Withdrawal Reject	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5KCG600	RC6 Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
5KCGA00	RC6 RC Solenoid Echo error during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
5KCGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KCGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5KCGF00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5KCGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5KCGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KCGQ00	RJC Press and Stack position fail during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5KCGR00	RJC Stack position fail during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5KCGS00	RC6 RJC Press position fail during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5KCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5KCGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5KCGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5KCGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Withdrawal Reject	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5KCGX00	RC6 GSC01 detects notes during RJC intialize during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KCJ100	RC6 RJC Full during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5KCJ200	RC6 RC No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes

Problem Code	Problem Description	Troubleshooting
5KCJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
5KCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCRF00	RC6 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KRP00	RC6 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCS200	RC6 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCS300	RC6 Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KCSA00	RC6 Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5CSR00	RC6 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KE0100	CST GS901 Light Jam during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE0200	CST GS902 Light Jam during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE0500	CST GS905 Light Jam during Withdrawal Reject	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
5KE0Z00	CST All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5KE1100	CST GS901 Dark Jam during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE1200	CST GS902 Dark Jam during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE1500	CST GS905 Dark Jam during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE1Z00	CST All Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KE2100	Error occurred by notes remained in CST GS901 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE2200	Error occurred by notes remained in CST GS902 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE2500	Error occurred by notes remained in CST GS905 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE2Z00	Error occurred by notes remained in CST All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KE3100	Sensor auto calibration error in CST GS901 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE3200	Sensor auto calibration error in CST GS902 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE3500	Sensor auto calibration error in CST GS905 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE3Z00	Sensor auto calibration error in CST All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KE4100	Extern lights check error in CST GS901 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE4200	Extern lights check error in CST GS902 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5KE4500	Extern lights check error in CST GS905 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE4Z00	Extern lights check error in CST All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KE5100	Path error on transport path in CST GS901 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE5200	Path error on transport path in CST GS902 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE5500	Path error on transport path in CST GS905 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE5Z00	Path error on transport path in CST All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KE6100	Path error on sensor except for transport path in CST GS901 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE6200	Path error on sensor except for transport path in CST GS902 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE6500	Path error on sensor except for transport path in CST GS905 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE6Z00	Path error on sensor except for transport path in CST All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KE7100	Error occurred by the notes disorder in CST GS901 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE7200	Error occurred by the notes disorder in CST GS902 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE7500	Error occurred by the notes disorder in CST GS905 during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KE7Z00	Error occurred by the notes disorder in CST All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5KEG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KEG200	CST Failure to move PP to stack position during Withdrawal Reject	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5KEG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Withdrawal Reject	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5KEG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEG600	CST Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Withdrawal Reject	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5KEGA00	CST RC Solenoid Echo error during Withdrawal Reject	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
5KEGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5KEGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5KEGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5KEGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5KEGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEGK00	CST RC Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5KEJ200	CST No Residue during Withdrawal Reject	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5KEJ300	CST Full,Bottom no detect before move RC PP to stack position during Withdrawal Reject	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5KER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KERF00	CST Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KERP00	CST PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KES200	CST Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KES300	CST RC Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KESA00	CST RC Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5KESR00	CST Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KF0100	RC7 GSF01 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF0200	RC7 GSF02 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF0500	RC7 GSF05 Light Jam during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5KF0Z00	RC7 All Light Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KF1100	RC7 GSF01 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF1200	RC7 GSF02 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF1500	RC7 GSF05 Dark Jam during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF1Z00	All RC7 Sensor Dark Jam during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KF2100	Error occurred by notes remained in RC7 GSF01 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF2200	Error occurred by notes remained in RC7 GSF02 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF6500	RC7 GSF05 Path error on sensor except for transport path during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF6Z00	RC7 All Path error on sensor except for transport path during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KF7100	Error occurred by the notes disorder in RC7 GSF01 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF7200	Error occurred by the notes disorder in RC7 GSF02 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF7500	Error occurred by the notes disorder in RC7 GSF05 during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KF7Z00	Error occurred by the notes disorder in RC7 All during Withdrawal Reject	1. Operate to initialize BRM.(Recovery)
5KFG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KFG200	RC7 Failure to move PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5KFG400	RC7 Failure to upward moving of PP during RC7 stack roller retreat movement during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5KFG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5KFG600	RC7 Stack Roller retreat position disorder during RC Separation during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
5KFGA00	RC7 Solenoid Echo error during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
5KFGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5KFGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5KFGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5KFGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5KFGK00	RC7 Stack Roller retreat fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Withdrawal Reject	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5KFJ200	RC7 No Residue during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5KFJ300	Full,Bottom no detect before move RC7 PP to stack position during Withdrawal Reject	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
5KFRF00	RC7 Feed Motor response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KFRP00	RC7 PP response timeout during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KFS200	RC7 Receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KFS300	RC7 Task not for separation receive separation command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KFSA00	RC7 Sub Task receive undefined command during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KFSR00	RC7 Sub Task for Wait Setting Error during Withdrawal Reject	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5KUS100	USB Bulk Sequence Error during Withdrawal Reject.	1. Restart over AP-SP
5KUS300	USB Bulk Received Length Error during Withdrawal Reject.	1. Reboot the system
5KUS400	Message transmission Error from USB to Main Task during Withdrawal Reject.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5KUS500	Message reception Error from MainTask to USB during Withdrawal Reject.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5KUSCMD	Bulk command data check error during Withdrawal Reject. (USB communication failure)	1. Restart over AP-SP
5KUSCRC	CRC data check error during Withdrawal Reject. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
5KUSLEN	Bulk length error during Withdrawal Reject. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
5L8HF13	Detection DB #03 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF14	Detection DB #04 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF15	Detection DB #05 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF16	Detection DB #06 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF17	Detection DB #07 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF18	Detection DB #08 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF19	Detection DB #09 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HF20	Detection DB #10 loading Fail during Log Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5L8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Log Read	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Log Read	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG03	BC Transaction Ready Fail When Receive BC READY Command during Log Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5L8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Log Read	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Log Read	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Log Read	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG07	Receive BC Unknown Command during Log Read	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5L8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Log Read	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Log Read	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Log Read	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5L8HG11	No Nation Code When Receive BC READY Command during Log Read	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Log Read	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5L8HG20	Fail to Initialize CIS When Receive BC READY Command during Log Read	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5L8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Log Read	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5L8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Log Read	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5L8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Log Read	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5L8HG24	ENCODER Mode Set Error When Receive BC READY Command during Log Read	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5L8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Log Read	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Log Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Log Read	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Log Read	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Log Read	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Log Read	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Log Read	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5L8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Log Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Log Read	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Log Read	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Log Read	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Log Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Log Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Log Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Log Read	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Log Read	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Log Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG46	Bill Number Error When Receive Check No Write Command during Log Read	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Log Read	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Log Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Log Read	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5L8HH01	Fail to Delete NAND FLASH during Log Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5L8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Log Read	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5L8HH03	Fail to Download Detection DB during Log Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5L8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Log Read	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5L8HH05	Detection DB Download File Check Error during Log Read	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5L8HH06	Detection DB Download File Size Error during Log Read	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5L8HH07	DB Table Save Error After Download Detection DB during Log Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5L8HH08	Over Detection DB Download (Over 10) during Log Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5L8HH09	Detection DB Header Information Error during Log Read	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5L8HH10	EP Download Fail during Log Read	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5L8HH11	EP Download Check Error during Log Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5L8HH12	EP Download File Size Error during Log Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5L8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Log Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5L8HH14	BC FPGA Download Fail during Log Read	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5L8HH15	Header Information Save Error After BC FPGA Download during Log Read	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5L8HH16	Not Provide BC FPGA Download during Log Read	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5L8HH17	EEPROM READ/WRITE Error during Log Read	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5L8HH18	Receive Unit Serial Number Undefined Option during Log Read	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5L8HH19	Receive USB Undefined Command during Log Read	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5L8HH20	No BC Process Note When Receive Image Upload Command during Log Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5L8HH21	FC1 Set Error When Receive Image Upload Command during Log Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH22	BC is Processing Note When Receive Image Upload Command during Log Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH23	FC2 Set Error When Receive Image Upload Command during Log Read	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH24	Not Provide Total Image Upload Function during Log Read	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5L8HH25	Not Provide Note Number Detection Image Upload Function during Log Read	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH26	FC2 Set Error When Receive Image Information Upload Command during Log Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Log Read	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Log Read	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Log Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Log Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Log Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Log Read	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Log Read	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Log Read	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5L8HI01	RecogTask Messeage Timeout Error during Log Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5L8HI02	ScanTask Messeage Timeout Error during Log Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5L8HI03	UartTask Messeage Timeout Error during Log Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5L8HI04	BcUsbTask Messeage Timeout Error during Log Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5L8HJ01	Algorithm Initialize Fail during Log Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HJ02	Algorithm Ready Fail during Log Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HJ03	Algorithm Information Set Error during Log Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5L8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Log Read	1. Retry the operation
5L8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Log Read	1. Check the number of CST Setting notes info
5L8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Log Read	1. Check Withdrawal notes setting
5L8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Log Read	1. Check Withdrawal notes info
5L8HS01	FPGA Write Data Error When Initialize Scan Driver during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS05	Not Process Shading When Initialize Scan Driver during Log Read	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5L8HS08	Fail to Set DAC When Initialize Scan Driver during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS11	FPGA Write Data Error When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5L8HS13	Fail to Set CIS Led On Value When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS14	Fail to Set Source of Scan Ligh When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS15	Not Process Shading When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS17	Fail to Set AFE Chip When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS18	Fail to Set DAC When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS19	MR/UV/DD Sampling Start Error When BC Ready during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS1A	Fail to Set 2-Notes DAC When BC Ready during Log Read	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5L8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Log Read	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5L8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS28	Fail to Set DAC When Stop BC during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Log Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5L8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Log Read	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5L8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Log Read	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5L8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Log Read	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5L8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Log Read	1. Retry the operation2. Change BC
5L8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Log Read	1. Retry the operation2. Change BC
5L8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Log Read	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5L8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Log Read	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5L8HS38	Max Ontime Ove When Process CIS Shadngr – Use in Plant during Log Read	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC

Problem Code	Problem Description	Troubleshooting
5L8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Log Read	1. Retry the operation2. Change BC
5L8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Log Read	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5L8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Log Read	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5L8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Log Read	1. Retry the operation2. Change BC
5L8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5L8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5L8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5L8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LAA100	UTC open Error before operation Log Read	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5LAA200	TSK open Error before operation Log Read	1. Open the upper unit. 2. Check the TSK open and close
5LAA300	BMU Inter Lock Error before operation Log Read	1. Check BMU open and close
5LAA400	BMU open Error before operation Log Read	1. Check BMU open and close
5LAA500	Replenishment CST open Error before operation Log Read	1. Check the Transit CST installation
5LAA600	CSM open Error before operation Log Read	1. Open the upper unit. 2. Check CSM Open/Close
5LAA800	BMD Inter Lock Error before operation Log Read	1. Open the lower unit. 2. Check the BMD open and close
5LAA900	BMD open Error before operation Log Read	1. Open the lower unit. 2. Check the BMD open and close
5LAAA00	BC Open Error before operation Log Read	1. Open the upper unit. 2. Check BC Open/Close
5LAAB00	RC Full Error before operation Log Read	1. Open the lower unit. 2. Check RC Full and remove notes
5LAAC00	RJC Full Error before operation Log Read	1. Open the upper unit. 2. Check RJC Full and remove notes
5LAAD00	UTC Full Error before operation Log Read	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5LAAE00	RTC Full Error before operation Log Read	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC

Problem Code	Problem Description	Troubleshooting
5LAAF00	RC Empty Error before operation Log Read	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5LAAG00	Suspected note RC open Error before operation Log Read	1. Open the lower unit. 2. Check the RC removal and reinstall
5LAE100	Received operation command without Initial Info Set during Log Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5LAE200	Status on not operation reception command during Log Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5LAE300	Received operation command without System Info Read during Log Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5LAE400	Transaction was executed without Initializing after power on during Log Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5LAEE00	RBU RS485 communication sequence disorder during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5LAEF00	RBU RS485 connection line disorder during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5LAEL00	RBU communication was not ready after power on during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5LBR000	RBU Response Timeout during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LBR700	RBU Response Message Timeout during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LBS100	RBU RS-232 Seq Num Echo Error during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LBS200	RBU RS-232 MI Echo Error during Log Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5LEH800	CST EEPROM Write Error during Log Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5LEH900	CST EEPROM Read Error during Log Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5LER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5LUS100	USB Bulk Sequence Error during Log Read.	1. Restart over AP-SP
5LUS300	USB Bulk Received Length Error during Log Read.	1. Reboot the system
5LUS400	Message transmission Error from USB to Main Task during Log Read.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5LUS500	Message reception Error from MainTask to USB during Log Read.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5LUSCMD	Bulk command data check error during Log Read. (USB communication failure)	1. Restart over AP-SP
5LUSCRC	CRC data check error during Log Read. (USB communication failure)	1. Restart over AP-SP
5LUSLEN	Bulk length error during Log Read. (USB communication failure)	1. Restart over AP-SP
5M1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5M57200	Error occurred by the notes disorder in RC5 GS502 during Log Read/Clear	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5M57500	Error occurred by the notes disorder in RC5 GS505 during Log Read/Clear	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5M5L100	Remaining notes stack process error in RC5 GS501 during Log Read/Clear	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5M5L200	Remaining notes stack process error in RC5 GS502 during Log Read/Clear	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5M5L500	Remaining notes stack process error in RC5 GS505 during Log Read/Clear	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5M5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during Log Read/Clear	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5M6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during Log Read/Clear	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5M6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5M7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5M8HA01	GS801A Sensor Error during Log Read/Clear	1. Check GS801A2. Operate to initialize BRM(Recovery)
5M8HA02	GS801B Sensor Error during Log Read/Clear	1. Check GS801B2. Operate to initialize BRM(Recovery)
5M8HA03	GS801A, GS801B Sensor Error during Log Read/Clear	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5M8HA04	GS802A Sensor Error during Log Read/Clear	1. Check GS802A2. Operate to initialize BRM(Recovery)
5M8HA05	GS801A, GS802A Sensor Error during Log Read/Clear	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5M8HA06	GS801B, GS802A Sensor Error during Log Read/Clear	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5M8HA07	GS801A, GS801B, GS802A Sensor Error during Log Read/Clear	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5M8HA08	GS802B Sensor Error during Log Read/Clear	1. Check GS802B2. Operate to initialize BRM(Recovery)
5M8HA09	GS801A, GS802B Sensor Error during Log Read/Clear	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5M8HA10	GS801B, GS802B Sensor Error during Log Read/Clear	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5M8HA11	GS801A, GS801B, GS802B Sensor Error during Log Read/Clear	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5M8HA12	GS802A, GS802B Sensor Error during Log Read/Clear	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5M8HA13	GS801A, GS802A, GS802B Sensor Error during Log Read/Clear	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5M8HA14	GS801B, GS802A, GS802B Sensor Error during Log Read/Clear	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5M8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Log Read/Clear	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5M8HB01	MR Sensor Level Error during Log Read/Clear	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5M8HC02	UV_01 Sensor Level Error during Log Read/Clear	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5M8HF03	CIS Shading data loading Fail during Log Read/Clear	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5M8HF04	Detection DB Table loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF05	BC FPGA Data checksum Fail during Log Read/Clear	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5M8HF06	BC FPGA Configuration Fail during Log Read/Clear	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5M8HF07	BC FPGA Header Information Loading Fail during Log Read/Clear	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5M8HF08	BC FPGA Initialize Fail during Log Read/Clear	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5M8HF09	BC FPGA VERSION Fail during Log Read/Clear	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5M8HF11	Detection DB #01 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF12	Detection DB #02 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF13	Detection DB #03 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF14	Detection DB #04 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF15	Detection DB #05 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF16	Detection DB #06 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF17	Detection DB #07 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF18	Detection DB #08 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF19	Detection DB #09 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HF20	Detection DB #10 loading Fail during Log Read/Clear	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5M8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Log Read/Clear	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Log Read/Clear	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG03	BC Transaction Ready Fail When Receive BC READY Command during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5M8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Log Read/Clear	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Log Read/Clear	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Log Read/Clear	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG07	Receive BC Unknown Command during Log Read/Clear	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5M8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Log Read/Clear	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Log Read/Clear	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Log Read/Clear	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5M8HG11	No Nation Code When Receive BC READY Command during Log Read/Clear	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Log Read/Clear	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5M8HG20	Fail to Initialize CIS When Receive BC READY Command during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5M8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5M8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5M8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5M8HG24	ENCODER Mode Set Error When Receive BC READY Command during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance

Problem Code	Problem Description	Troubleshooting
5M8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Log Read/Clear	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Log Read/Clear	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Log Read/Clear	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Log Read/Clear	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Log Read/Clear	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Log Read/Clear	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Log Read/Clear	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Log Read/Clear	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Log Read/Clear	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Log Read/Clear	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Log Read/Clear	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Log Read/Clear	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Log Read/Clear	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Log Read/Clear	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5M8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Log Read/Clear	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Log Read/Clear	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Log Read/Clear	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG46	Bill Number Error When Receive Check No Write Command during Log Read/Clear	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Log Read/Clear	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Log Read/Clear	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Log Read/Clear	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HH01	Fail to Delete NAND FLASH during Log Read/Clear	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5M8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Log Read/Clear	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5M8HH03	Fail to Download Detection DB during Log Read/Clear	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5M8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Log Read/Clear	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5M8HH05	Detection DB Download File Check Error during Log Read/Clear	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5M8HH06	Detection DB Download File Size Error during Log Read/Clear	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5M8HH07	DB Table Save Error After Download Detection DB during Log Read/Clear	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5M8HH08	Over Detection DB Download (Over 10) during Log Read/Clear	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5M8HH09	Detection DB Header Information Error during Log Read/Clear	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5M8HH10	EP Download Fail during Log Read/Clear	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5M8HH11	EP Download Check Error during Log Read/Clear	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5M8HH12	EP Download File Size Error during Log Read/Clear	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5M8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Log Read/Clear	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5M8HH14	BC FPGA Download Fail during Log Read/Clear	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5M8HH15	Header Information Save Error After BC FPGA Download during Log Read/Clear	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5M8HH16	Not Provide BC FPGA Download during Log Read/Clear	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5M8HH17	EEPROM READ/WRITE Error during Log Read/Clear	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5M8HH18	Receive Unit Serial Number Undefined Option during Log Read/Clear	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5M8HH19	Receive USB Undefined Command during Log Read/Clear	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5M8HH20	No BC Process Note When Receive Image Upload Command during Log Read/Clear	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH21	FC1 Set Error When Receive Image Upload Command during Log Read/Clear	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH22	BC is Processing Note When Receive Image Upload Command during Log Read/Clear	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH23	FC2 Set Error When Receive Image Upload Command during Log Read/Clear	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH24	Not Provide Total Image Upload Function during Log Read/Clear	1. Check if SP or TM is out of date.2. Initialize the BRM. If initialization does not fix the problem, contact the technician.
5M8HH25	Not Provide Note Number Detection Image Upload Function during Log Read/Clear	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH26	FC2 Set Error When Receive Image Information Upload Command during Log Read/Clear	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Log Read/Clear	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Log Read/Clear	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5M8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Log Read/Clear	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Log Read/Clear	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Log Read/Clear	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Log Read/Clear	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Log Read/Clear	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Log Read/Clear	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5M8HI01	RecogTask Messeage Timeout Error during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5M8HI02	ScanTask Messeage Timeout Error during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5M8HI03	UartTask Messeage Timeout Error during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5M8HI04	BcUsbTask Messeage Timeout Error during Log Read/Clear	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5M8HJ01	Algorithm Initialize Fail during Log Read/Clear	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HJ02	Algorithm Ready Fail during Log Read/Clear	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HJ03	Algorithm Information Set Error during Log Read/Clear	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5M8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Log Read/Clear	1. Retry the operation
5M8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Log Read/Clear	1. Check the number of CST Setting notes info
5M8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Log Read/Clear	1. Check Withdrawal notes setting

Problem Code	Problem Description	Troubleshooting
5M8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Log Read/Clear	1. Check Withdrawal notes info
5M8HS01	FPGA Write Data Error When Initialize Scan Driver during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS05	Not Process Shading When Initialize Scan Driver during Log Read/Clear	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5M8HS08	Fail to Set DAC When Initialize Scan Driver during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS11	FPGA Write Data Error When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS13	Fail to Set CIS Led On Value When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS14	Fail to Set Source of Scan Ligh When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS15	Not Process Shading When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS17	Fail to Set AFE Chip When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS18	Fail to Set DAC When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS19	MR/UV/DD Sampling Start Error When BC Ready during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS1A	Fail to Set 2-Notes DAC When BC Ready during Log Read/Clear	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5M8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Log Read/Clear	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5M8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS28	Fail to Set DAC When Stop BC during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5M8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Log Read/Clear	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5M8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Log Read/Clear	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5M8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Log Read/Clear	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5M8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Log Read/Clear	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5M8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Log Read/Clear	1. Retry the operation2. Change BC
5M8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Log Read/Clear	1. Retry the operation2. Change BC
5M8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Log Read/Clear	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5M8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Log Read/Clear	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5M8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Log Read/Clear	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5M8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Log Read/Clear	1. Retry the operation2. Change BC
5M8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Log Read/Clear	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5M8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Log Read/Clear	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5M8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Log Read/Clear	1. Retry the operation2. Change BC
5M8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5N8HF16	Detection DB #06 loading Fail during CST Notes Count Read	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5N8HF17	Detection DB #07 loading Fail during CST Notes Count Read	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5N8HF18	Detection DB #08 loading Fail during CST Notes Count Read	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5N8HF19	Detection DB #09 loading Fail during CST Notes Count Read	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5N8HF20	Detection DB #10 loading Fail during CST Notes Count Read	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5N8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during CST Notes Count Read	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during CST Notes Count Read	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG03	BC Transaction Ready Fail When Receive BC READY Command during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5N8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during CST Notes Count Read	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during CST Notes Count Read	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during CST Notes Count Read	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG07	Receive BC Unknown Command during CST Notes Count Read	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5N8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during CST Notes Count Read	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during CST Notes Count Read	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during CST Notes Count Read	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5N8HG11	No Nation Code When Receive BC READY Command during CST Notes Count Read	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during CST Notes Count Read	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5N8HG20	Fail to Initialize CIS When Receive BC READY Command during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5N8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5N8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5N8HG23	DD Sensor DAC Set Error When Receive BC READY Command during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5N8HG24	ENCODER Mode Set Error When Receive BC READY Command during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance

Problem Code	Problem Description	Troubleshooting
5N8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during CST Notes Count Read	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during CST Notes Count Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during CST Notes Count Read	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during CST Notes Count Read	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during CST Notes Count Read	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during CST Notes Count Read	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during CST Notes Count Read	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during CST Notes Count Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during CST Notes Count Read	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during CST Notes Count Read	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during CST Notes Count Read	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during CST Notes Count Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during CST Notes Count Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during CST Notes Count Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5N8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during CST Notes Count Read	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during CST Notes Count Read	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during CST Notes Count Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG46	Bill Number Error When Receive Check No Write Command during CST Notes Count Read	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during CST Notes Count Read	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG48	Bill Number Table CRC Error When Receive Check No Write Command during CST Notes Count Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during CST Notes Count Read	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HH01	Fail to Delete NAND FLASH during CST Notes Count Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5N8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during CST Notes Count Read	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5N8HH03	Fail to Download Detection DB during CST Notes Count Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5N8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during CST Notes Count Read	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5N8HH05	Detection DB Download File Check Error during CST Notes Count Read	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5N8HH06	Detection DB Download File Size Error during CST Notes Count Read	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5N8HH07	DB Table Save Error After Download Detection DB during CST Notes Count Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5N8HH08	Over Detection DB Download (Over 10) during CST Notes Count Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5N8HH09	Detection DB Header Information Error during CST Notes Count Read	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5N8HH10	EP Download Fail during CST Notes Count Read	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5N8HH11	EP Download Check Error during CST Notes Count Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5N8HH12	EP Download File Size Error during CST Notes Count Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5N8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during CST Notes Count Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5N8HH14	BC FPGA Download Fail during CST Notes Count Read	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5N8HH15	Header Information Save Error After BC FPGA Download during CST Notes Count Read	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5N8HH16	Not Provide BC FPGA Download during CST Notes Count Read	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5N8HH17	EEPROM READ/WRITE Error during CST Notes Count Read	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5N8HH18	Receive Unit Serial Number Undefined Option during CST Notes Count Read	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5N8HH19	Receive USB Undefined Command during CST Notes Count Read	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5N8HH20	No BC Process Note When Receive Image Upload Command during CST Notes Count Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH21	FC1 Set Error When Receive Image Upload Command during CST Notes Count Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH22	BC is Processing Note When Receive Image Upload Command during CST Notes Count Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH23	FC2 Set Error When Receive Image Upload Command during CST Notes Count Read	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH24	Not Provide Total Image Upload Function during CST Notes Count Read	1. Check if SP or TM is out of date.2. Initialize the BRM.3. If initialization does not fix the problem, contact the technician.
5N8HH25	Not Provide Note Number Detection Image Upload Function during CST Notes Count Read	1. Check BC image save mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH26	FC2 Set Error When Receive Image Information Upload Command during CST Notes Count Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during CST Notes Count Read	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during CST Notes Count Read	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5N8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Read	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during CST Notes Count Read	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Read	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5N8HI01	RecogTask Messeage Timeout Error during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5N8HI02	ScanTask Messeage Timeout Error during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5N8HI03	UartTask Messeage Timeout Error during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5N8HI04	BcUsbTask Messeage Timeout Error during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5N8HJ01	Algorithm Initialize Fail during CST Notes Count Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HJ02	Algorithm Ready Fail during CST Notes Count Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HJ03	Algorithm Information Set Error during CST Notes Count Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5N8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during CST Notes Count Read	1. Retry the operation
5N8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during CST Notes Count Read	1. Check the number of CST Setting notes info
5N8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during CST Notes Count Read	1. Check Withdrawal notes setting

Problem Code	Problem Description	Troubleshooting
5N8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during CST Notes Count Read	1. Check Withdrawal notes info
5N8HS01	FPGA Write Data Error When Initialize Scan Driver during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS05	Not Process Shading When Initialize Scan Driver during CST Notes Count Read	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5N8HS08	Fail to Set DAC When Initialize Scan Driver during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS11	FPGA Write Data Error When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS13	Fail to Set CIS Led On Value When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS14	Fail to Set Source of Scan Ligh When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS15	Not Process Shading When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS17	Fail to Set AFE Chip When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS18	Fail to Set DAC When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS19	MR/UV/DD Sampling Start Error When BC Ready during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS1A	Fail to Set 2-Notes DAC When BC Ready during CST Notes Count Read	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5N8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during CST Notes Count Read	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5N8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5N8HS28	Fail to Set DAC When Stop BC during CST Notes Count Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5N8HS29	MR/UV/DD Sampling Stop Error When Stop BC during CST Notes Count Read	1. Retry the operation2. Operate to initialize BRM(Recovery)
5N8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during CST Notes Count Read	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5N8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during CST Notes Count Read	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5N8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during CST Notes Count Read	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5N8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during CST Notes Count Read	1. Retry the operation2. Change BC
5N8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during CST Notes Count Read	1. Retry the operation2. Change BC
5N8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during CST Notes Count Read	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5N8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during CST Notes Count Read	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5N8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during CST Notes Count Read	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5N8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during CST Notes Count Read	1. Retry the operation2. Change BC
5N8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during CST Notes Count Read	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5N8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during CST Notes Count Read	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5N8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during CST Notes Count Read	1. Retry the operation2. Change BC
5N8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5N8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5N8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5N8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NAA100	UTC open Error before operation CST Notes Count Read	1. Open the upper unit. 2. Check the UTC removal and reinstallation

Problem Code	Problem Description	Troubleshooting
5NAA200	TSK open Error before operation CST Notes Count Read	1. Open the upper unit. 2. Check the TSK open and close
5NAA300	BMU Inter Lock Error before operation CST Notes Count Read	1. Check BMU open and close
5NAA400	BMU open Error before operation CST Notes Count Read	1. Check BMU open and close
5NAA500	Replenishment CST open Error before operation CST Notes Count Read	1. Check the Transit CST installation
5NAA600	CSM open Error before operation CST Notes Count Read	1. Open the upper unit. 2. Check CSM Open/Close
5NAA800	BMD Inter Lock Error before operation CST Notes Count Read	1. Open the lower unit. 2. Check the BMD open and close
5NAA900	BMD open Error before operation CST Notes Count Read	1. Open the lower unit. 2. Check the BMD open and close
5NAAA00	BC Open Error before operation CST Notes Count Read	1. Open the upper unit. 2. Check BC Open/Close
5NAAB00	RC Full Error before operation CST Notes Count Read	1. Open the lower unit. 2. Check RC Full and remove notes
5NAAC00	RJC Full Error before operation CST Notes Count Read	1. Open the upper unit. 2. Check RJC Full and remove notes
5NAAD00	UTC Full Error before operation CST Notes Count Read	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5NAAE00	RTC Full Error before operation CST Notes Count Read	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5NAAF00	RC Empty Error before operation CST Notes Count Read	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5NAAG00	Suspected note RC open Error before operation CST Notes Count Read	1. Open the lower unit. 2. Check the RC removal and reinstall
5NAE100	Received operation command without Initial Info Set during CST Notes Count Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5NAE200	Status on not operation reception command during CST Notes Count Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5NAE300	Received operation command without System Info Read during CST Notes Count Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5NAE400	Transaction was executed without Initializing after power on during CST Notes Count Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5NAEE00	RBU RS485 communication sequence disorder during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5NAEF00	RBU RS485 connection line disorder during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization

Problem Code	Problem Description	Troubleshooting
5NAEL00	RBU communication was not ready after power on during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5NAH600	Failure to check clearing NVRAM during CST Notes Count Read	1. Operate to initialize BRM(Recovery)
5NBH100	RC1 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH200	RC2 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH300	RC3 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH400	RC4 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH500	RC5 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH600	RC6 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH700	RC1 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH800	RC2 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBH900	RC3 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBHA00	RC4 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBHB00	RC5 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBHC00	RC6 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBHD00	RC1 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5NBHE00	RC2 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5NBHF00	RC3 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5NBHG00	RC4 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5NBHH00	RC5 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5NBHJ00	RC6 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5NBHK00	BMD Open Error During EEPROM Read/Write during CST Notes Count Read	1. Check the lower Unit load/removal
5NBHU00	BMD EEPROM Read Error during CST Notes Count Read	1. Replace RBU B/D
5NBHV00	BMD EEPROM Write Error during CST Notes Count Read	1. Replace RBU B/D
5NBHW00	BMD EEPROM Verify Error during CST Notes Count Read	1. Replace RBU B/D
5NBHX00	RC7 EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBHY00	RC7 EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NBHZ00	RC7 EEPROM Verify Error during CST Notes Count Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5NBR000	RBU Response Timeout during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NBR700	RBU Response Message Timeout during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NBS100	RBU RS-232 Seq Num Echo Error during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NBS200	RBU RS-232 MI Echo Error during CST Notes Count Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5NEH800	CST EEPROM Write Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NEH900	CST EEPROM Read Error during CST Notes Count Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5NER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5NUS100	USB Bulk Sequence Error during CST Notes Count Read.	1. Restart over AP-SP
5NUS300	USB Bulk Received Length Error during CST Notes Count Read.	1. Reboot the system
5NUS400	Message transmission Error from USB to Main Task during CST Notes Count Read.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5NUS500	Message reception Error from MainTask to USB during CST Notes Count Read.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5NUCMD	Bulk command data check error during CST notes count Read. (USB communication failure)	1. Restart over AP-SP
5NUCRC	CRC data check error during CST notes count Read. (USB communication failure)	1. Restart over AP-SP
5NUSLEN	Bulk length error during CST notes count Read. (USB communication failure)	1. Restart over AP-SP

5P5L100	Remaining notes stack process error in RC5 GS501 during CST Notes Count Delete	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5P5L200	Remaining notes stack process error in RC5 GS502 during CST Notes Count Delete	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5P5L500	Remaining notes stack process error in RC5 GS505 during CST Notes Count Delete	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5P5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during CST Notes Count Delete	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5P6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during CST Notes Count Delete	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5P6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5P6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P8HA01	GS801A Sensor Error during CST Notes Count Delete	1. Check GS801A2. Operate to initialize BRM(Recovery)
5P8HA02	GS801B Sensor Error during CST Notes Count Delete	1. Check GS801B2. Operate to initialize BRM(Recovery)
5P8HA03	GS801A, GS801B Sensor Error during CST Notes Count Delete	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5P8HA04	GS802A Sensor Error during CST Notes Count Delete	1. Check GS802A2. Operate to initialize BRM(Recovery)
5P8HA05	GS801A, GS802A Sensor Error during CST Notes Count Delete	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5P8HA06	GS801B, GS802A Sensor Error during CST Notes Count Delete	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5P8HA07	GS801A, GS801B, GS802A Sensor Error during CST Notes Count Delete	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5P8HA08	GS802B Sensor Error during CST Notes Count Delete	1. Check GS802B2. Operate to initialize BRM(Recovery)
5P8HA09	GS801A, GS802B Sensor Error during CST Notes Count Delete	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5P8HA10	GS801B, GS802B Sensor Error during CST Notes Count Delete	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5P8HA11	GS801A, GS801B, GS802B Sensor Error during CST Notes Count Delete	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5P8HA12	GS802A, GS802B Sensor Error during CST Notes Count Delete	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5P8HA13	GS801A, GS802A, GS802B Sensor Error during CST Notes Count Delete	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5P8HA14	GS801B, GS802A, GS802B Sensor Error during CST Notes Count Delete	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5P8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during CST Notes Count Delete	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5P8HB01	MR Sensor Level Error during CST Notes Count Delete	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5P8HC02	UV_01 Sensor Level Error during CST Notes Count Delete	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5P8HF03	CIS Shading data loading Fail during CST Notes Count Delete	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5P8HF04	Detection DB Table loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF05	BC FPGA Data checksum Fail during CST Notes Count Delete	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5P8HF06	BC FPGA Configuration Fail during CST Notes Count Delete	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5P8HF07	BC FPGA Header Information Loading Fail during CST Notes Count Delete	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5P8HF08	BC FPGA Initialize Fail during CST Notes Count Delete	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5P8HF09	BC FPGA VERSION Fail during CST Notes Count Delete	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5P8HF11	Detection DB #01 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF12	Detection DB #02 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF13	Detection DB #03 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF14	Detection DB #04 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF15	Detection DB #05 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF16	Detection DB #06 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF17	Detection DB #07 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF18	Detection DB #08 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HF19	Detection DB #09 loading Fail during CST Notes Count Delete	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5P8HF20	Detection DB #10 loading Fail during CST Notes Count Delete	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5P8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during CST Notes Count Delete	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during CST Notes Count Delete	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG03	BC Transaction Ready Fail When Receive BC READY Command during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5P8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during CST Notes Count Delete	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during CST Notes Count Delete	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during CST Notes Count Delete	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG07	Receive BC Unknown Command during CST Notes Count Delete	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5P8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during CST Notes Count Delete	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during CST Notes Count Delete	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during CST Notes Count Delete	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5P8HG11	No Nation Code When Receive BC READY Command during CST Notes Count Delete	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during CST Notes Count Delete	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5P8HG20	Fail to Initialize CIS When Receive BC READY Command during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5P8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
5P8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5P8HG23	DD Sensor DAC Set Error When Receive BC READY Command during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5P8HG24	ENCODER Mode Set Error When Receive BC READY Command during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5P8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during CST Notes Count Delete	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during CST Notes Count Delete	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during CST Notes Count Delete	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during CST Notes Count Delete	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during CST Notes Count Delete	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during CST Notes Count Delete	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during CST Notes Count Delete	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command <b>위조지폐 목록 검색 구분 설정 오류</b> (Classification Value is Not 1, 2, 3 ) during CST Notes Count Delete	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during CST Notes Count Delete	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during CST Notes Count Delete	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during CST Notes Count Delete	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5P8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during CST Notes Count Delete	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during CST Notes Count Delete	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during CST Notes Count Delete	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during CST Notes Count Delete	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during CST Notes Count Delete	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during CST Notes Count Delete	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG46	Bill Number Error When Receive Check No Write Command during CST Notes Count Delete	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during CST Notes Count Delete	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG48	Bill Number Table CRC Error When Receive Check No Write Command during CST Notes Count Delete	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during CST Notes Count Delete	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HH01	Fail to Delete NAND FLASH during CST Notes Count Delete	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5P8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during CST Notes Count Delete	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5P8HH03	Fail to Download Detection DB during CST Notes Count Delete	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5P8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during CST Notes Count Delete	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5P8HH05	Detection DB Download File Check Error during CST Notes Count Delete	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5P8HH06	Detection DB Download File Size Error during CST Notes Count Delete	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5P8HH07	DB Table Save Error After Download Detection DB during CST Notes Count Delete	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5P8HH08	Over Detection DB Download (Over 10) during CST Notes Count Delete	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5P8HH09	Detection DB Header Information Error during CST Notes Count Delete	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5P8HH10	EP Download Fail during CST Notes Count Delete	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5P8HH11	EP Download Check Error during CST Notes Count Delete	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5P8HH12	EP Download File Size Error during CST Notes Count Delete	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5P8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during CST Notes Count Delete	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5P8HH14	BC FPGA Download Fail during CST Notes Count Delete	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5P8HH15	Header Information Save Error After BC FPGA Download during CST Notes Count Delete	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5P8HH16	Not Provide BC FPGA Download during CST Notes Count Delete	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5P8HH17	EEPROM READ/WRITE Error during CST Notes Count Delete	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5P8HH18	Receive Unit Serial Number Undefined Option during CST Notes Count Delete	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5P8HH19	Receive USB Undefined Command during CST Notes Count Delete	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5P8HH20	No BC Process Note When Receive Image Upload Command during CST Notes Count Delete	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH21	FC1 Set Error When Receive Image Upload Command during CST Notes Count Delete	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH22	BC is Processing Note When Receive Image Upload Command during CST Notes Count Delete	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH23	FC2 Set Error When Receive Image Upload Command during CST Notes Count Delete	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH24	Not Provide Total Image Upload Function during CST Notes Count Delete	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5P8HH25	Not Provide Note Number Detection Image Upload Function during CST Notes Count Delete	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH26	FC2 Set Error When Receive Image Information Upload Command during CST Notes Count Delete	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during CST Notes Count Delete	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during CST Notes Count Delete	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Delete	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Delete	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Delete	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Delete	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during CST Notes Count Delete	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during CST Notes Count Delete	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5P8HI01	RecogTask Messeage Timeout Error during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5P8HI02	ScanTask Messeage Timeout Error during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5P8HI03	UartTask Messeage Timeout Error during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5P8HI04	BcUsbTask Messeage Timeout Error during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5P8HJ01	Algorithm Initialize Fail during CST Notes Count Delete	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5P8HJ02	Algorithm Ready Fail during CST Notes Count Delete	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HJ03	Algorithm Information Set Error during CST Notes Count Delete	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5P8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during CST Notes Count Delete	1. Retry the operation
5P8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during CST Notes Count Delete	1. Check the number of CST Setting notes info
5P8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during CST Notes Count Delete	1. Check Withdrawal notes setting
5P8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during CST Notes Count Delete	1. Check Withdrawal notes info
5P8HS01	FPGA Write Data Error When Initialize Scan Driver during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS05	Not Process Shading When Initialize Scan Driver during CST Notes Count Delete	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5P8HS08	Fail to Set DAC When Initialize Scan Driver during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS11	FPGA Write Data Error When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS13	Fail to Set CIS Led On Value When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS14	Fail to Set Source of Scan Ligh When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS15	Not Process Shading When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS17	Fail to Set AFE Chip When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS18	Fail to Set DAC When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5P8HS19	MR/UV/DD Sampling Start Error When BC Ready during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS1A	Fail to Set 2-Notes DAC When BC Ready during CST Notes Count Delete	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5P8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during CST Notes Count Delete	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5P8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS28	Fail to Set DAC When Stop BC during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS29	MR/UV/DD Sampling Stop Error When Stop BC during CST Notes Count Delete	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5P8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during CST Notes Count Delete	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5P8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during CST Notes Count Delete	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5P8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during CST Notes Count Delete	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5P8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during CST Notes Count Delete	1. Retry the operation2. Change BC
5P8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during CST Notes Count Delete	1. Retry the operation2. Change BC
5P8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during CST Notes Count Delete	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5P8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during CST Notes Count Delete	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5P8HS38	Max Ontime Ove When Process CIS Shading – Use in Plant during CST Notes Count Delete	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5P8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during CST Notes Count Delete	1. Retry the operation2. Change BC
5P8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during CST Notes Count Delete	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5P8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during CST Notes Count Delete	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5P8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during CST Notes Count Delete	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
5P8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5P8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PAA100	UTC open Error before operation CST Notes Count Delete	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5PAA200	TSK open Error before operation CST Notes Count Delete	1. Open the upper unit. 2. Check the TSK open and close
5PAA300	BMU Inter Lock Error before operation CST Notes Count Delete	1. Check BMU open and close
5PAA400	BMU open Error before operation CST Notes Count Delete	1. Check BMU open and close
5PAA500	Replenishment CST open Error before operation CST Notes Count Delete	1. Check the Transit CST installation
5PAA600	CSM open Error before operation CST Notes Count Delete	1. Open the upper unit. 2. Check CSM Open/Close
5PAA800	BMD Inter Lock Error before operation CST Notes Count Delete	1. Open the lower unit. 2. Check the BMD open and close
5PAA900	BMD open Error before operation CST Notes Count Delete	1. Open the lower unit. 2. Check the BMD open and close
5PAAA00	BC Open Error before operation CST Notes Count Delete	1. Open the upper unit. 2. Check BC Open/Close
5PAAB00	RC Full Error before operation CST Notes Count Delete	1. Open the lower unit. 2. Check RC Full and remove notes
5PAAC00	RJC Full Error before operation CST Notes Count Delete	1. Open the upper unit. 2. Check RJC Full and remove notes
5PAAD00	UTC Full Error before operation CST Notes Count Delete	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5PAAE00	RTC Full Error before operation CST Notes Count Delete	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5PAAF00	RC Empty Error before operation CST Notes Count Delete	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5PAAG00	Suspected note RC open Error before operation CST Notes Count Delete	1. Open the lower unit. 2. Check the RC removal and reinstall
5PAE100	Received operation command without Initial Info Set during CST Notes Count Delete	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initial Info Set -> Initialization

Problem Code	Problem Description	Troubleshooting
5PAE200	Status on not operation reception command during CST Notes Count Delete	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5PAE300	Received operation command without System Info Read during CST Notes Count Delete	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5PAE400	Transaction was executed without Initializing after power on during CST Notes Count Delete	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5PAEE00	RBU RS485 communication sequence disorder during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5PAEF00	RBU RS485 connection line disorder during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5PAEL00	RBU communication was not ready after power on during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5PAH600	Failure to check clearing NVRAM during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)
5PBH100	RC1 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH200	RC2 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH300	RC3 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH400	RC4 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH500	RC5 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH600	RC6 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH700	RC1 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH800	RC2 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBH900	RC3 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBHA00	RC4 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5PBHB00	RC5 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBHC00	RC6 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBHD00	RC1 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBHE00	RC2 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBHF00	RC3 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBHG00	RC4 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBHH00	RC5 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBHJ00	RC6 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBHK00	BMD Open Error During EEPROM Read/Write during CST Notes Count Delete	1. Check the lower Unit load/removal
5PBHU00	BMD EEPROM Read Error during CST Notes Count Delete	1. Replace RBU B/D
5PBHV00	BMD EEPROM Write Error during CST Notes Count Delete	1. Replace RBU B/D
5PBHW00	BMD EEPROM Verify Error during CST Notes Count Delete	1. Replace RBU B/D
5PBHX00	RC7 EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBHY00	RC7 EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PBHZ00	RC7 EEPROM Verify Error during CST Notes Count Delete	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5PBR000	RBU Response Timeout during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PBR700	RBU Response Message Timeout during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PBS100	RBU RS-232 Seq Num Echo Error during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PBS200	RBU RS-232 MI Echo Error during CST Notes Count Delete	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5PCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PEH800	CST EEPROM Write Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PEH900	CST EEPROM Read Error during CST Notes Count Delete	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5PER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5PUS100	USB Bulk Sequence Error during CST Notes Count Delete.	1. Restart over AP-SP
5PUS300	USB Bulk Received Length Error during CST Notes Count Delete.	1. Reboot the system
5PUS400	Message transmission Error from USB to Main Task during CST Notes Count Delete.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5PUS500	Message reception Error from MainTask to USB during CST Notes Count Delete.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5PUSCMD	Bulk command data check error during CST notes count Delete. (USB communication failure)	1. Restart over AP-SP
5PUSCRC	CRC data check error during CST notes count Delete. (USB communication failure)	1. Restart over AP-SP
5PUSLEN	Bulk length error during CST notes count Delete. (USB communication failure)	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
5Q00100	GS801 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00200	GS002 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00300	GS003 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00400	GS004 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00500	GS005 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00600	GS006 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00700	GS014 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00800	GS018 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00900	GS020 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00A00	GS021 Light Jam error during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q00C00	GS030 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00E00	GS001 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00H00	GS618 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00J00	GS619 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00M00	GSA01 Light Jam error during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00N00	GSA02 Light Jam error during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00P00	GSA03 Light Jam error during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00Q00	GSD01 Light Jam error during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q00W00	GS802 Light Jam error during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q01100	GS801 Dark Jam error during Deposit for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q02300	Error occurred by notes remained in GS003 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02400	Error occurred by notes remained in GS004 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02500	Error occurred by notes remained in GS005 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02600	Error occurred by notes remained in GS006 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02700	Error occurred by notes remained in GS014 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02800	Error occurred by notes remained in GS018 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02900	Error occurred by notes remained in GS020 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02A00	Error occurred by notes remained in GS021 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02C00	Error occurred by notes remained in GS030 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02E00	Error occurred by notes remained in GS001 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q02H00	Error occurred by notes remained in GS618 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02J00	Error occurred by notes remained in GS619 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02M00	Error occurred by notes remained in GSA01 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02N00	Error occurred by notes remained in GSA02 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02P00	Error occurred by notes remained in GSA03 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02Q00	Error occurred by notes remained in GSD01 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q02W00	Error occurred by notes remained in GS802 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05100	GS801 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05200	GS002 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05300	GS003 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q05400	GS004 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05500	GS005 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05600	GS006 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05700	GS014 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05800	GS018 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05900	GS020 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05A00	GS021 Path error on transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05C00	GS030 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05E00	GS001 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05H00	GS618 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q05J00	GS619 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05M00	GSA01 Path error on transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05N00	GSA02 Path error on transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05P00	GSA03 Path error on transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05Q00	GSD01 Path error on transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q05W00	GS802 Path error on transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06100	GS801 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06200	GS002 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06300	GS003 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06400	GS004 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q06500	GS005 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06600	GS006 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06700	GS014 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06800	GS018 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06900	GS020 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06A00	GS021 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06C00	GS030 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06E00	GS001 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06H00	GS618 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06J00	GS619 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q06M00	GSA01 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06N00	GSA02 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06P00	GSA03 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06Q00	GSD01 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q06W00	GS802 Path error on sensor except for transport path during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07100	Error occurred by the notes disorder in GS801 during Deposit for adjustment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07200	Error occurred by the notes disorder in GS002 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07300	Error occurred by the notes disorder in GS003 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07400	Error occurred by the notes disorder in GS004 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07500	Error occurred by the notes disorder in GS005 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q07600	Error occurred by the notes disorder in GS006 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07700	Error occurred by the notes disorder in GS014 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07800	Error occurred by the notes disorder in GS018 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07900	Error occurred by the notes disorder in GS020 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07A00	Error occurred by the notes disorder in GS021 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07C00	Error occurred by the notes disorder in GS030 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07E00	Error occurred by the notes disorder in GS001 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07H00	Error occurred by the notes disorder in GS618 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07J00	Error occurred by the notes disorder in GS619 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07M00	Error occurred by the notes disorder in GSA01 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q07N00	Error occurred by the notes disorder in GSA02 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07P00	Error occurred by the notes disorder in GSA03 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07Q00	Error occurred by the notes disorder in GSD01 during Deposit for adjustment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q07W00	Error occurred by the notes disorder in GS802 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q0D100	Reject excess error (continue Reject error) during Deposit for adjustment	1. Check the Rejected denomination during Deposit for adjustment(Including denomination which did not set up in the cassette)
5Q0D200	Reject excess error (notes excess error) during Deposit for adjustment	1. Check the Rejected denomination during Deposit for adjustment(Including denomination which did not set up in the cassette)
5Q0D300	Reject excess error (Unappointed notes error) during Deposit for adjustment	1. Check the Rejected denomination during Deposit for adjustment(Including denomination which did not set up in the cassette)
5Q0D400	Reject excess error (Cassette note error) during Deposit for adjustment	1. Check the Rejected denomination during Deposit for adjustment(Including denomination which did not set up in the cassette)
5Q0D500	Reject excess error (2notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0D600	Reject excess error (Gap error(1note)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0D700	Reject excess error (Gap error(2notes)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0D800	Reject excess error (skew error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0D900	Reject excess error (shift error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution

Problem Code	Problem Description	Troubleshooting
5Q0DA00	Reject excess error (Max length error(1note)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0DB00	Reject excess error (Max length error(2notes)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0DC00	Reject excess error (Max length error(3notes)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0DD00	Reject excess error (Max length error(4notes)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0DE00	Reject excess error (Min length error(1note)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0DF00	Reject excess error (Min length error(2notes)) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Q0DG00	Reject excess error (note error) during Deposit for adjustment	1. Check the Rejected denomination during Deposit for adjustment(Including denomination which did not set up in the cassette)
5Q0DH00	Reject excess error (MR error) during Deposit for adjustment	1. Check the Rejected Notes during Deposit for adjustment(Failure to Notes recognition)
5Q0DJ00	Reject excess error (IR error) during Deposit for adjustment	1. Check the Rejected Notes during Deposit for adjustment(Failure to Notes recognition)
5Q0DK00	Reject excess error (Edge error) during Deposit for adjustment	1. Check the Rejected Notes during Deposit for adjustment(Failure to Notes recognition)
5Q0DL00	Reject excess error (Image error) during Deposit for adjustment	1. Check the Rejected Notes during Deposit for adjustment(Failure to Notes recognition)
5Q0DM00	Reject excess error (UV error) during Deposit for adjustment	1. Check the Rejected Notes during Deposit for adjustment(Failure to Notes recognition)
5Q0DN00	Reject excess error (Sensor error) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DO00	Deposit count disallowed notes reject excess error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DP00	Reject excess error (Communication error) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DQ00	Reject excess error (Full & etc) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DR00	Recognition Fail Error (Recognition test fail) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Q0DS00	Recognition Fail Error (No Recognition info) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DT00	Recognition Fail Error (Only STX in Recognition info) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DU00	Recognition Fail Error (Recognition info BCC NG) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DV00	Recognition Fail Error (Recognition info MI NG) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DW00	Recognition Fail Error (Recognition info Index Fail) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DX00	Recognition Fail Error (Info BC Pass Info) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0DY00	Recognition Fail Error (Serial Number Data Format error) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0F100	GM001 motor doesn't operate at a constant speed when the motor works during Deposit for adjustment	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5Q0F200	GM002 motor doesn't operate at a constant speed when the motor works during Deposit for adjustment	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Q0F400	GM004 motor doesn't operate at a constant speed when the motor works during Deposit for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Q0F600	GM006 motor doesn't operate at a constant speed when the motor works during Deposit for adjustment	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Q0F700	GM007 motor doesn't operate at a constant speed when the motor works during Deposit for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Q0F900	GM009 motor doesn't operate at a constant speed when the motor works during Deposit for adjustment	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5Q0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit for adjustment	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5Q0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit for adjustment	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Q0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
5Q0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit for adjustment	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Q0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit for adjustment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Q0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Deposit for adjustment	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
5Q0G100	Failure to 3Way Gate 0 degree mode conversion during Deposit for adjustment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Q0G200	Failure to 3Way Gate 120 degree mode conversion during Deposit for adjustment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Q0GB00	Time Out to 3Way Gate Mode conversion during Deposit for adjustment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Q0GC00	Failure to RTRJ Gate RJC Mode conversion during Deposit for adjustment	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5Q0GD00	Failure to RTRJ Gate RTC Mode conversion during Deposit for adjustment	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5Q0J200	Box full detection error during Deposit for adjustment	1. Open the lower unit2. Open MID Transport(7)3. Check CST inside whether Full or not
5Q0K100	Duplication S/N Error during Deposit for adjustment	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5Q0N400	Jam Message Receive Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q0NA00	Checksum error when notes separate from TSK during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5Q0NC00	length different from separation part to stack part after transport during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q0NK00	BC recognized notes have no cassette to be stacked during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q0NL00	Withdrawal recog info is different from deposit recog info during Deposit for adjustment	1. Check the Deposited Denomination2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization
5Q0NM00	BC note recog info is different from stack cassette note during Deposit for adjustment	1. Check the Deposited Denomination2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization
5Q0Q100	UTC detachment Error during Deposit for adjustment	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5Q0Q200	TSK detachment Error during Deposit for adjustment	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5Q0Q300	BMU Inter Lock Error during Deposit for adjustment	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5Q0Q400	BMU detackment Error during Deposit for adjustment	1. Check Load/Removal of the upper unit
5Q0Q500	Replenishment CST detachment Error during Deposit for adjustment	1. Check the safe door open
5Q0Q600	CSM detackment Error during Deposit for adjustment	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
5Q0Q800	BMD Inter Lock Error during Deposit for adjustment	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5Q0Q900	BMD detachment Error during Deposit for adjustment	1. Check the lower Unit load/removal
5Q0QA00	BC Open Error during Deposit for adjustment	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5Q0QS00	Receive Error Stop CMD during Deposit for adjustment	1. Initialize
5Q0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q0SZ00	Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q10100	RC1 GS101 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q10200	RC1 GS102 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q10500	RC1 GS105 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Q10Z00	RC1 All Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q11100	RC1 GS101 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q11200	RC1 GS102 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q11500	RC1 GS105 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q11Z00	All RC1 Sensor Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q12100	Error occurred by notes remained in RC1 GS101 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q12200	Error occurred by notes remained in RC1 GS102 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q12500	Error occurred by notes remained in RC1 GS105 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q12Z00	Error occurred by notes remained in All RC1 Sensor during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q13100	RC1 GS101 Sensor auto calibration error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q13200	RC1 GS102 Sensor auto calibration error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q13500	RC1 GS105 Sensor auto calibration error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q13Z00	All RC1 Sensor auto calibration error during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q14100	RC1 GS101 Extern lights check error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q14200	RC1 GS102 Extern lights check error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q14500	RC1 GS105 Extern lights check error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q14Z00	All RC1 Sensor Extern lights check error during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q15100	RC1 GS101 Path error on transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q15200	RC1 GS102 Path error on transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q15500	RC1 GS105 Path error on transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q15Z00	All RC1 Sensor Path error on transport path during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q16100	RC1 GS101 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q16200	RC1 GS102 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q16500	RC1 GS105 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q16Z00	RC1 All Path error on sensor except for transport path during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q17100	Error occurred by the notes disorder in RC1 GS101 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q17200	Error occurred by the notes disorder in RC1 GS102 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q17500	Error occurred by the notes disorder in RC1 GS105 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q17Z00	Error occurred by the notes disorder in RC1 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q1G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q1G200	RC1 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5Q1G400	RC1 Failure to upward moving of PP during RC1 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5Q1G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1G600	RC1 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q1G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5Q1GA00	RC1 Solenoid Echo error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
5Q1GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q1GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5Q1GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5Q1GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1GK00	RC1 Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q1GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q1GQ00	RJC Press and Stack position fail during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5Q1GR00	RJC Stack position fail during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5Q1GS00	RC1 RJC Press position fail during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5Q1GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5Q1GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5Q1GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5Q1GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5Q1GX00	RC1 GS101 detects notes during RJC initialize during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q1J100	RJC Full during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5Q1J200	RC1 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A).5. Fill up the Notes if there are no notes
5Q1J300	Full,Bottom no detect before move RC1 PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5Q1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1RF00	RC1 Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1RP00	RC1 PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1S200	RC1 Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1S300	RC1 Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1SA00	RC1 Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q1SR00	RC1 Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q20100	RC2 GS201 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q20200	RC2 GS202 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q20500	RC2 GS205 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Q20Z00	RC2 All Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q21100	RC2 GS201 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q21200	RC2 GS202 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q21500	RC2 GS205 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q21Z00	RC2 All Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q22100	Error occurred by notes remained in RC2 GS201 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q22200	Error occurred by notes remained in RC2 GS202 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q22500	Error occurred by notes remained in RC2 GS205 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q22Z00	Error occurred by notes remained in RC2 All Sensor during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q23100	Sensor auto calibration error in RC2 GS201 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q23200	Sensor auto calibration error in RC2 GS202 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q23500	Sensor auto calibration error in RC2 GS205 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q23Z00	Sensor auto calibration error in RC2 All Sensor during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q24100	Extern lights check error in RC2 GS201 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q24200	Extern lights check error in RC2 GS202 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q24500	Extern lights check error in RC2 GS205 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q24Z00	Extern lights check error in RC2 All Sensor during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q25100	Path error on transport path in RC2 GS201 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q25200	Path error on transport path in RC2 GS202 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q25500	Path error on transport path in RC2 GS205 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q25Z00	Path error on transport path in RC2 All Sensor during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q26100	Path error on sensor except for transport path in RC2 GS201 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q26200	Path error on sensor except for transport path in RC2 GS202 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q26500	Path error on sensor except for transport path in RC2 GS205 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q26Z00	Path error on sensor except for transport path in RC2 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q27100	Error occurred by the notes disorder in RC2 GS201 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q27200	Error occurred by the notes disorder in RC2 GS202 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q27500	Error occurred by the notes disorder in RC2 GS205 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q27Z00	Error occurred by the notes disorder in RC2 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q2G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q2G200	RC2 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (B)4. Open the recycle cassette door (B)5. Check cassette status to move stage up and down
5Q2G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
5Q2G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2G600	RC2 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5Q2GA00	RC2 Solenoid Echo error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5Q2GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q2GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q2GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5Q2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5Q2GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2GK00	RC2 Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q2J200	RC2 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
5Q2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5Q2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5Q37200	Error occurred by the notes disorder in RC3 GS302 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q37500	Error occurred by the notes disorder in RC3 GS305 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q37Z00	Error occurred by the notes disorder in RC3 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q3G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q3G200	RC3 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
5Q3G400	RC3 Failure to upward moving of PP during RC3 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (C)4. Open the recycle cassette door (C)5. Check cassette status to move stage up and down
5Q3G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3G600	RC3 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
5Q3GA00	RC3 RC Solenoid Echo error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
5Q3GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q3GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q3GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5Q3GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5Q3GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q3J200	RC3 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
5Q3J300	RC3 Full,Bottom no detect before move RC PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.

Problem Code	Problem Description	Troubleshooting
5Q3L100	Remaining notes stack process error in RC3 GS301 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q3L200	Remaining notes stack process error in RC3 GS302 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q3L500	Remaining notes stack process error in RC3 GS305 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3RF00	RC3 Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3RP00	RC3 PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3S200	RC3 Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3S300	RC3 RC Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3SA00	RC3 RC Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q3SR00	RC3 Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q40100	RC4 GS401 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q40200	RC4 GS402 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q40500	RC4 GS405 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Q40Z00	RC4 All Sensor Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q41100	RC4 GS401 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q41200	RC4 GS402 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q41500	RC4 GS405 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q41Z00	RC4 All Sensor Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q42100	Error occurred by notes remained in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q42200	Error occurred by notes remained in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q42500	Error occurred by notes remained in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q42Z00	Error occurred by notes remained in RC4 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q43100	Sensor auto calibration error in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q43200	Sensor auto calibration error in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q43500	Sensor auto calibration error in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q43Z00	Sensor auto calibration error in RC4 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q44100	Extern lights check error in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q44200	Extern lights check error in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q44500	Extern lights check error in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q44Z00	Extern lights check error in RC4 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q45100	Path error on transport path in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q45200	Path error on transport path in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q45500	Path error on transport path in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q45Z00	Path error on transport path in RC4 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q46100	Path error on sensor except for transport path in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q46200	Path error on sensor except for transport path in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q46500	Path error on sensor except for transport path in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q46Z00	Path error on sensor except for transport path in RC4 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q47100	Error occurred by the notes disorder in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q47200	Error occurred by the notes disorder in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q47500	Error occurred by the notes disorder in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q47Z00	Error occurred by the notes disorder in RC4 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q4G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q4G200	RC4 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5Q4G400	RC4 Failure to upward moving of PP during RC4 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down
5Q4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4G600	RC4 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5Q4GA00	RC4 RC Solenoid Echo error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
5Q4GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q4GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5Q4GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5Q4GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q4GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q4J200	RC4 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes
5Q4J300	RC4 Full, Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
5Q4L100	Remaining notes stack process error in RC4 GS401 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q4L200	Remaining notes stack process error in RC4 GS402 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q4L500	Remaining notes stack process error in RC4 GS405 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4RF00	RC4 Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4RP00	RC4 PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4S200	RC4 Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q4S300	RC4 RC Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4SA00	RC4 RC Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q4SR00	RC4 Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q50100	RC5 GS501 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q50200	RC5 GS502 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q50500	RC5 GS505 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Q50Z00	RC5 All Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q51100	RC5 GS501 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q51200	RC5 GS502 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q51500	RC5 GS505 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q51Z00	RC5 All Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q52100	Error occurred by notes remained in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q52200	Error occurred by notes remained in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q52500	Error occurred by notes remained in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q52Z00	Error occurred by notes remained in RC5 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q53100	Sensor auto calibration error in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q53200	Sensor auto calibration error in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q53500	Sensor auto calibration error in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q53Z00	Sensor auto calibration error in RC5 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q54100	Extern lights check error in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q54200	Extern lights check error in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q54500	Extern lights check error in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q54Z00	Extern lights check error in RC5 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q55100	Path error on transport path in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q55200	Path error on transport path in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Q55500	Path error on transport path in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q55Z00	Path error on transport path in RC5 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q56100	Path error on sensor except for transport path in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q56200	Path error on sensor except for transport path in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q56500	Path error on sensor except for transport path in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q56Z00	Path error on sensor except for transport path in RC5 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q57100	Error occurred by the notes disorder in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q57200	Error occurred by the notes disorder in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q57500	Error occurred by the notes disorder in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q57Z00	Error occurred by the notes disorder in RC5 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5Q5G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q5G200	RC5 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5Q5G400	RC5 Failure to upword moving of PP during RC5 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (E)4. Open the recycle cassette door (E)5. Check cassette status to move stage up and down
5Q5G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5G600	RC5 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
5Q5GA00	RC5 Solenoid Echo error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
5Q5GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q5GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5Q5GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5Q5GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Q5GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5GK00	RC5 Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Q5J200	RC5 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E).5. Fill up the Notes if there are no notes
5Q5J300	RC5 Full,Bottom no detect before move RC PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
5Q5L100	Remaining notes stack process error in RC5 GS501 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q5L200	Remaining notes stack process error in RC5 GS502 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q5L500	Remaining notes stack process error in RC5 GS505 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Q5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5RF00	RC5 Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5RP00	RC5 PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5S200	RC5 Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5S300	RC5 Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5SA00	RC5 Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q5SR00	RC5 Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q61H00	GS618/619 Dark Jam error during Deposit for adjustment.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q62100	CSM Residue Error during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Q62300	CSM insert notes excess Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5Q62500	CSM notes disappear Error during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Q62600	CSM notes appear Error during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Q62Z00	CSM Residue Error during during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Q6G100	Fail to move CSM BP to Stack Position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
5Q6G200	Fail to move CSM BP to Deposit Position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Q6G300	Fail to move CSM BP to Separation Position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Q6G500	Fail to move CSM BP to Note-Out Position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Q6G600	Fail to move CSM P-Roller to Home position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Q6G800	Fail to CSM return notes during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Q6G900	CSM GM601 Step out during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Q6GA00	Fail to move CSM BP to return note Position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Q6GB00	Fail to move CSM FP to Deposit Position during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5Q6GF00	Fail to move CSM G-Roller to Homeposition during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Q6GG00	Fail to move both CSM P/G-Roller to Homeposition during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Q6M200	CSM Inner Shutter Open Error during Deposit for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5Q6M300	CSM Inner Shutter Close Error during Deposit for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5Q6M400	CSM Outer Shutter Open Error during Deposit for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
5Q6M500	CSM Outer Shutter Close Error during Deposit for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5Q6M600	CSM Outer Shutter is Opened during Deposit for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5Q6M700	CSM Inner Shutter Open during Stack during Deposit for adjustment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5Q6M800	CSM Stopper Home position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5Q6M900	CSM Stopper Stack position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5Q6MB00	CSM Bill Supporter Up position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5Q6MC00	CSM Bill Supporter Down position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5Q6P100	CSM PP Withdrawal(Stack) position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6P200	CSM PP Deposit position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6P300	CSM PP Separation position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6P400	CSM PP collect lost notes position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5Q6P500	CSM PP Note-out position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6P600	CSM PP Note-arrange position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6P800	CSM PP Control Stack Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6P900	CSM PP Return note position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6PD00	CSM PP Check semi-note Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Deposit for adjustment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Q6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6RB00	CSM BP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q6RF00	CSM Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6RL00	CSM Lift response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6RP00	CSM PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6RR00	CSM Bill supporter response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6RS00	CSM Inner Shutter response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6RT00	CSM Stopper response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6SA00	CSM Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q6SR00	CSM Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q70100	TSK GS701 Light Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q70200	TSK GS702 Light Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q70300	TSK GS703,4 Light Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q70900	GS020 Light Jam error during Deposit for adjustmentl(TSK motor Step out)	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Q70Z00	TSK All Light Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q71100	TSK GS701 Dark Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q71200	TSK GS702 Dark Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StacKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5Q71300	TSK GS703,4 Dark Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q71Z00	TSK All Dark Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q72100	Error occurred by notes remained in TSK GS701 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q72200	Error occurred by notes remained in TSK GS702 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q72300	Error occurred by notes remained in TSK GS703,4 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q72Z00	Error occurred by notes remained in TSK All Sensor during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q77100	Error occurred by the notes disorder in TSK GS701 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q77200	Error occurred by the notes disorder in TSK GS702 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q77300	Error occurred by the notes disorder in TSK GS703,4 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q77Z00	Error occurred by the notes disorder in TSK All during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7B200	Note detected in TSK Entry After Separate Ready during Deposit for adjustment	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5Q7B300	TSK GM701 motor status change failed(Timeout exceeded) during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7C100	TSK Miss-pickup during separation during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber
5Q7C200	TSK Last note unclear during separation during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
5Q7C300	TSK Last note No front detect during separataion during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5Q7C400	TSK Last note No rear detect during separation during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7C500	TSK Max Length NG occur 10 times Dark Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5Q7C600	TSK Max length note stucked in entry Light Jam during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7C700	TSK Light Jam Retry Over Error during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Deposit for adjustment	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5Q7C900	TSK Low speed control 30 times over Error during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5Q7CA00	TSK Incounted note is not Outcounted for 500ms during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7F100	TSK GM701 stepout during separation during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
5Q7F300	TSK GM701 F-Roller Homeposition fail during Deposit for adjustment	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
5Q7G100	GM701 Return notes fail during Deposit for adjustment	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly
5Q7J100	TSK Full during Deposit for adjustment	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
5Q7J200	TSK Empty during ready separation during Deposit for adjustment	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5Q7L100	Remaining notes stack process error in TSK GS701 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7L200	Remaining notes stack process error in TSK GS702 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7L300	Remaining notes stack process error in TSK GS703,4 during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5Q7LZ00	Remaining notes stack process error in TSK All during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Q7M100	TSK Stopper Home position for intialize fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5Q7M200	TSK Stopper Stack position for intialize fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5Q7M300	TSK Stopper Return note position for intialize fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5Q7M400	TSK Stopper Lock FP Fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5Q7M500	TSK Stopper Unlock FP Fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5Q7P100	FP Sensor detect Dark Fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5Q7P200	FP Sensor detect Light Fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5Q7P300	PP Press position fail during Deposit for adjustment	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
5Q7Q700	TSK Door Open during operation in Deposit for adjustment	1. Close the door of TSK(5)
5Q7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7RF00	TSK Feed Motor response timeout in Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7RP00	TSK PP response timeout in Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7RT00	TSK Stopper response timeout in Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q7S200	TSK Receive undefined command in Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q7SR00	TSK Sub Task for Wait Setting Error in Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8HA01	GS801A Sensor Error during Deposit for adjustment	1. Check GS801A2. Operate to initialize BRM(Recovery)
5Q8HA02	GS801B Sensor Error during Deposit for adjustment	1. Check GS801B2. Operate to initialize BRM(Recovery)
5Q8HA03	GS801A, GS801B Sensor Error during Deposit for adjustment	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5Q8HA04	GS802A Sensor Error during Deposit for adjustment	1. Check GS802A2. Operate to initialize BRM(Recovery)
5Q8HA05	GS801A, GS802A Sensor Error during Deposit for adjustment	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5Q8HA06	GS801B, GS802A Sensor Error during Deposit for adjustment	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5Q8HA07	GS801A, GS801B, GS802A Sensor Error during Deposit for adjustment	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5Q8HA08	GS802B Sensor Error during Deposit for adjustment	1. Check GS802B2. Operate to initialize BRM(Recovery)
5Q8HA09	GS801A, GS802B Sensor Error during Deposit for adjustment	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5Q8HA10	GS801B, GS802B Sensor Error during Deposit for adjustment	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5Q8HA11	GS801A, GS801B, GS802B Sensor Error during Deposit for adjustment	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5Q8HA12	GS802A, GS802B Sensor Error during Deposit for adjustment	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Q8HA13	GS801A, GS802A, GS802B Sensor Error during Deposit for adjustment	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Q8HA14	GS801B, GS802A, GS802B Sensor Error during Deposit for adjustment	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Q8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Deposit for adjustment	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Q8HB01	MR Sensor Level Error during Deposit for adjustment	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Q8HC02	UV_01 Sensor Level Error during Deposit for adjustment	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Q8HF03	CIS Shading data loading Fail during Deposit for adjustment	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5Q8HF04	Detection DB Table loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Q8HF05	BC FPGA Data checksum Fail during Deposit for adjustment	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5Q8HF06	BC FPGA Configuration Fail during Deposit for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Q8HF07	BC FPGA Header Information Loading Fail during Deposit for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Q8HF08	BC FPGA Initialize Fail during Deposit for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Q8HF09	BC FPGA VERSION Fail during Deposit for adjustment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Q8HF11	Detection DB #01 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF12	Detection DB #02 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF13	Detection DB #03 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF14	Detection DB #04 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF15	Detection DB #05 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF16	Detection DB #06 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF17	Detection DB #07 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF18	Detection DB #08 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF19	Detection DB #09 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HF20	Detection DB #10 loading Fail during Deposit for adjustment	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Q8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Deposit for adjustment	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Deposit for adjustment	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG03	BC Transaction Ready Fail When Receive BC READY Command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Q8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Deposit for adjustment	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Deposit for adjustment	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Q8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Deposit for adjustment	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG07	Receive BC Unknown Command during Deposit for adjustment	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5Q8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Deposit for adjustment	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Deposit for adjustment	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Deposit for adjustment	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5Q8HG11	No Nation Code When Receive BC READY Command during Deposit for adjustment	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Deposit for adjustment	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5Q8HG20	Fail to Initialize CIS When Receive BC READY Command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Q8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Q8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5Q8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Q8HG24	ENCODER Mode Set Error When Receive BC READY Command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5Q8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Deposit for adjustment	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Deposit for adjustment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Q8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Deposit for adjustment	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Deposit for adjustment	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Deposit for adjustment	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Deposit for adjustment	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Deposit for adjustment	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command <b>위조지폐 목록 검색 구분 설정 오류</b> (Classification Value is Not 1, 2, 3) during Deposit for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Deposit for adjustment	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Deposit for adjustment	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Deposit for adjustment	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Deposit for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Deposit for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Deposit for adjustment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Deposit for adjustment	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Deposit for adjustment	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Q8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Deposit for adjustment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG46	Bill Number Error When Receive Check No Write Command during Deposit for adjustment	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Deposit for adjustment	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Deposit for adjustment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Deposit for adjustment	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HH01	Fail to Delete NAND FLASH during Deposit for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Q8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Deposit for adjustment	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5Q8HH03	Fail to Download Detection DB during Deposit for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Q8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Deposit for adjustment	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5Q8HH05	Detection DB Download File Check Error during Deposit for adjustment	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5Q8HH06	Detection DB Download File Size Error during Deposit for adjustment	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5Q8HH07	DB Table Save Error After Download Detection DB during Deposit for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Q8HH08	Over Detection DB Download (Over 10) during Deposit for adjustment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Q8HH09	Detection DB Header Information Error during Deposit for adjustment	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5Q8HH10	EP Download Fail during Deposit for adjustment	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5Q8HH11	EP Download Check Error during Deposit for adjustment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Q8HH12	EP Download File Size Error during Deposit for adjustment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Q8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Deposit for adjustment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Q8HH14	BC FPGA Download Fail during Deposit for adjustment	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
5Q8HH15	Header Information Save Error After BC FPGA Download during Deposit for adjustment	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5Q8HH16	Not Provide BC FPGA Download during Deposit for adjustment	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5Q8HH17	EEPROM READ/WRITE Error during Deposit for adjustment	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5Q8HH18	Receive Unit Serial Number Undefined Option during Deposit for adjustment	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5Q8HH19	Receive USB Undefined Command during Deposit for adjustment	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5Q8HH20	No BC Process Note When Receive Image Upload Command during Deposit for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH21	FC1 Set Error When Receive Image Upload Command during Deposit for adjustment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH22	BC is Processing Note When Receive Image Upload Command during Deposit for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH23	FC2 Set Error When Receive Image Upload Command during Deposit for adjustment	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH24	Not Provide Total Image Upload Function during Deposit for adjustment	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Q8HH25	Not Provide Note Number Detection Image Upload Function during Deposit for adjustment	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH26	FC2 Set Error When Receive Image Information Upload Command during Deposit for adjustment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Deposit for adjustment	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Deposit for adjustment	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit for adjustment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5Q8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Deposit for adjustment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Deposit for adjustment	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Deposit for adjustment	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Deposit for adjustment	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Q8HI01	RecogTask Messeage Timeout Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Q8HI02	ScanTask Messeage Timeout Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Q8HI03	UartTask Messeage Timeout Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Q8HI04	BcUsbTask Messeage Timeout Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Q8HJ01	Algorithm Initialize Fail during Deposit for adjustment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HJ02	Algorithm Ready Fail during Deposit for adjustment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HJ03	Algorithm Information Set Error during Deposit for adjustment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Q8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Deposit for adjustment	1. Retry the operation
5Q8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Deposit for adjustment	1. Check the number of CST Setting notes info
5Q8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Deposit for adjustment	1. Check Withdrawal notes setting
5Q8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Deposit for adjustment	1. Check Withdrawal notes info
5Q8HS01	FPGA Write Data Error When Initialize Scan Driver during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Q8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS05	Not Process Shading When Initialize Scan Driver during Deposit for adjustment	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5Q8HS08	Fail to Set DAC When Initialize Scan Driver during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS11	FPGA Write Data Error When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS13	Fail to Set CIS Led On Value When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS14	Fail to Set Source of Scan Ligh When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS15	Not Process Shading When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS17	Fail to Set AFE Chip When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS18	Fail to Set DAC When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS19	MR/UV/DD Sampling Start Error When BC Ready during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS1A	Fail to Set 2-Notes DAC When BC Ready during Deposit for adjustment	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5Q8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Deposit for adjustment	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5Q8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS28	Fail to Set DAC When Stop BC during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Deposit for adjustment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Q8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Deposit for adjustment	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5Q8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Deposit for adjustment	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC

Problem Code	Problem Description	Troubleshooting
5Q8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Deposit for adjustment	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5Q8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Deposit for adjustment	1. Retry the operation2. Change BC
5Q8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Deposit for adjustment	1. Retry the operation2. Change BC
5Q8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Deposit for adjustment	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5Q8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Deposit for adjustment	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5Q8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Deposit for adjustment	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5Q8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Deposit for adjustment	1. Retry the operation2. Change BC
5Q8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Deposit for adjustment	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5Q8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Deposit for adjustment	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5Q8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Deposit for adjustment	1. Retry the operation2. Change BC
5Q8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8S100	BCU response MI error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8S200	BCU response BCC error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8S300	BCU response Sub MI error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Q8S400	BCU response Parameter error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Q8S900	BCU response Timeout Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QA2100	Error occurred by notes remained in GS801 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2200	Error occurred by notes remained in GS002 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2300	Error occurred by notes remained in GS003 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2400	Error occurred by notes remained in GS004 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2500	Error occurred by notes remained in GS005 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2600	Error occurred by notes remained in GS006 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2700	Error occurred by notes remained in GS014 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2800	Error occurred by notes remained in GS018 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2900	Error occurred by notes remained in GS020 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5QA2A00	Error occurred by notes remained in GS021 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2E00	Error occurred by notes remained in GS001 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2H00	Error occurred by notes remained in GS618 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2J00	Error occurred by notes remained in GS619 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2K00	Error occurred by notes remained in GS701,702 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2M00	Error occurred by notes remained in GSA01 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2N00	Error occurred by notes remained in GSA02 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2P00	Error occurred by notes remained in GSA03 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QA2Q00	Error occurred by notes remained in GSD01 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5QA2W00	Error occurred by notes remained in GS802 during Deposit for adjustment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5QAA100	UTC open Error before operation Deposit for adjustment	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5QAA200	TSK open Error before operation Deposit for adjustment	1. Open the upper unit. 2. Check the TSK open and close
5QAA300	BMU Inter Lock Error before operation Deposit for adjustment	1. Check BMU open and close
5QAA400	BMU open Error before operation Deposit for adjustment	1. Check BMU open and close
5QAA500	Replenishment CST open Error before operation Deposit for adjustment	1. Check the Transit CST installation
5QAA600	CSM open Error before operation Deposit for adjustment	1. Open the upper unit. 2. Check CSM Open/Close
5QAA800	BMD Inter Lock Error before operation Deposit for adjustment	1. Open the lower unit. 2. Check the BMD open and close
5QAA900	BMD open Error before operation Deposit for adjustment	1. Open the lower unit. 2. Check the BMD open and close
5QAAA00	BC Open Error before operation Deposit for adjustment	1. Open the upper unit. 2. Check BC Open/Close
5QAAB00	RC Full Error before operation Deposit for adjustment	1. Open the lower unit. 2. Check RC Full and remove notes
5QAAC00	RJC Full Error before operation Deposit for adjustment	1. Open the upper unit. 2. Check RJC Full and remove notes
5QAAD00	UTC Full Error before operation Deposit for adjustment	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5QAAE00	RTC Full Error before operation Deposit for adjustment	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5QAAF00	RC Empty Error before operation Deposit for adjustment	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5QAAG00	Suspected note RC open Error before operation Deposit for adjustment	1. Open the lower unit. 2. Check the RC removal and reinstall
5QAAJ00	Deposit for adjustment is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5QAE100	Received operation command without Initial Info Set during Deposit for adjustment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5QAE200	Status on not operation reception command during Deposit for adjustment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization

Problem Code	Problem Description	Troubleshooting
5QAE300	Received operation command without System Info Read during Deposit for adjustment	1. Restart over AP-SP2. Do transaction operation follow by set up read system info for TM Test-> Initial Info Set -> Initialization
5QAE400	Transaction was executed without initializing after power on during Deposit for adjustment	1. Restart over AP-SP2. Do transaction operation follow by set up read system info for TM Test-> Initial Info Set -> Initialization
5QAEE00	RBU RS485 communication sequence disorder during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5QAEF00	RBU RS485 connection line disorder during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5QAEL00	RBU communication was not ready after power on during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5QAH600	Failure to check clearing NVRAM during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5QAHF00	Transaction count exists but GS801A sensor no change during Deposit for adjustment	1. Check GS801A2. Operate to initialize BRM(Recovery)
5QAHG00	Transaction count exists but GS801B sensor no change during Deposit for adjustment	1. Check GS801B2. Operate to initialize BRM(Recovery)
5QAHH00	Transaction count exists but GS802A sensor no change during Deposit for adjustment	1. Check GS802A2. Operate to initialize BRM(Recovery)
5QAHJ00	Transaction count exists but GS802B sensor no change during Deposit for adjustment	1. Check GS802B2. Operate to initialize BRM(Recovery)
5QAJ300	OC(Operation Cassette) Full Semi-Ok in Collect Cash mode during Deposit for adjustment Ready Process	1. Open the lower unit. 2. Check RC Full and remove notes
5QAJD00	Error of no available CST during Withdrawal for adjustment	1. Operate to initialize BRM(Recovery)
5QAJF00	RC All Full Semi-Ok in Reposition mode during Deposit for adjustment	1. Operate to initialize BRM(Recovery)
5QANJ00	TSK Stack count is different with stacked note during Adjustment deposit without reject notes	1. Operate to initialize BRM(Recovery)
5QAR100	Message timeout error during operation ready during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QAR200	Message timeout error during transaction operation during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QAR300	Message timeout error during error postprocessing during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QAR800	RBU/BC sensor auto dimming response message timeout error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QARC00	BC response message timeout error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5QARJ00	Message timeout error during Stop Ready during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QAS600	Reject CST is set to Transit CST in Collect Cash mode during Deposit for adjustment.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QAS700	Comparative error when denomination/note count set during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QAS800	Designated Cassette for Collect Cash is set Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASA00	Set note number to Transit CST in adjustment mode during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASB00	Stop command Receive Semi-normal during Deposit For Adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASC00	Both RC and CST have Requested count during Deposit For Adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASD00	Reject CST Set Error(Reject CST is set to Transit CST on a device that does not support the front Transit or in a status of Transit CST removal) during adjustment deposit.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASE00	USB Timeout occurs due to excessive RC Separation error Retry during Deposit for adjustment	1. Operate to initialize(recover) BRM.2. Reboot the system when the same error occurs after initialization.
5QASF00	OC(Operation Cassette) is set to Transit CST on a device that does not support the front Transit CST during Deposit For Adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASG00	OC(Operation Cassette) Set Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASH00	Note number Set Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASJ00	Set Note number to RC for Deposit or DPC or RJC in Repenishment mode during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASK00	Set No Reject Note Process Option in Repenishment mode during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASL00	Reject CST Set Error during adjustment deposit	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASM00	Both Reject CST and OC(Operation Cassette) are set to Transit CST in Replenishment mode during Deposit for adjustment.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5QASP00	NO RC to Stack during adjustment deposit	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASQ00	Set Count in several RC during Adjustment deposit	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASR00	Max withdrawal count excess request error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QASY00	Requested count is 0 during Adjustment deposit	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QBH100	RC1 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH200	RC2 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH300	RC3 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH400	RC4 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH500	RC5 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH600	RC6 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH700	RC1 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH800	RC2 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBH900	RC3 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBHA00	RC4 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBHB00	RC5 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBHC00	RC6 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5QBHD00	RC1 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBHE00	RC2 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBHF00	RC3 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBHG00	RC4 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBHH00	RC5 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBHJ00	RC6 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBHK00	BMD Open Error During EEPROM Read/Write during Deposit for adjustment	1. Check the lower Unit load/removal
5QBHU00	BMD EEPROM Read Error during Deposit for adjustment	1. Replace RBU B/D
5QBHV00	BMD EEPROM Write Error during Deposit for adjustment	1. Replace RBU B/D
5QBHW00	BMD EEPROM Verify Error during Deposit for adjustment	1. Replace RBU B/D
5QBHX00	RC7 EEPROM Read Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBHY00	RC7 EEPROM Write Error during Deposit for adjustment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5QBHZ00	RC7 EEPROM Verify Error during Deposit for adjustment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5QBR000	RBU Response Timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QBR700	RBU Response Message Timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QBS100	RBU RS-232 Seq Num Echo Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QBS200	RBU RS-232 MI Echo Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QBSS00	RBU Auto Calibration Command Parameter Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5QC0100	RC6 GSC01 Light Jam during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC0200	RC6 GSC02 Light Jam during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC0500	RC6 GSC05 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(8)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5QC0Z00	RC6 All Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QC1100	RC6 GSC01 Dark Jam during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC1200	RC6 GSC02 Dark Jam during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC1500	RC6 GSC05 Dark Jam during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC1Z00	RC6 All Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QC2100	Error occurred by notes remained in RC6 GSC01 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC2200	Error occurred by notes remained in RC6 GSC02 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC2500	Error occurred by notes remained in RC6 GSC05 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC2Z00	Error occurred by notes remained in RC6 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5QC3100	Sensor auto calibration error in RC6 GSC01 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC3200	Sensor auto calibration error in RC6 GSC02 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC3500	Sensor auto calibration error in RC6 GSC05 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC3Z00	Sensor auto calibration error in RC6 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QC4100	Extern lights check error in RC6 GSC01 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC4200	Extern lights check error in RC6 GSC02 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC4500	Extern lights check error in RC6 GSC05 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC4Z00	Extern lights check error in RC6 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QC5100	Path error on transport path in RC6 GSC01 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC5200	Path error on transport path in RC6 GSC02 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC5500	Path error on transport path in RC6 GSC05 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC5Z00	Path error on transport path in RC6 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5QC6100	Path error on sensor except for transport path in RC6 GSC01 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC6200	Path error on sensor except for transport path in RC6 GSC02 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC6500	Path error on sensor except for transport path in RC6 GSC05 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC6Z00	Path error on sensor except for transport path in RC6 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QC7100	Error occurred by the notes disorder in RC6 GSC01 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC7200	Error occurred by the notes disorder in RC6 GSC02 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC7500	Error occurred by the notes disorder in RC6 GSC05 during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QC7Z00	Error occurred by the notes disorder in RC6 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QCG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QCG200	RC6 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5QCG400	RC6 Failure to upward moving of PP during RC6 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5QCG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Deposit for adjustment	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5QCG600	RC6 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
5QCGA00	RC6 RC Solenoid Echo error during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
5QCGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QCGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5QCGF00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5QCGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5QCGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QCGQ00	RJC Press and Stack position fail during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5QCGR00	RJC Stack position fail during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5QCGS00	RC6 RJC Press position fail during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5QCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5QCGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5QCGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5QCGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Deposit for adjustment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5QCGX00	RC6 GSC01 detects notes during RJC intialize during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QCJ100	RC6 RJC Full during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5QCJ200	RC6 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes

Problem Code	Problem Description	Troubleshooting
5QCJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check contamination of GS111/GS112 sensor.
5QCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCRF00	RC6 Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCRP00	RC6 PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCS200	RC6 Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCS300	RC6 Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCSA00	RC6 Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QCSR00	RC6 Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QE0100	CST GS901 Light Jam during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE0200	CST GS902 Light Jam during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE0500	CST GS905 Light Jam during Deposit for adjustment	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
5QE0Z00	CST All Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5QE1100	CST GS901 Dark Jam during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE1200	CST GS902 Dark Jam during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE1500	CST GS905 Dark Jam during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE1Z00	CST All Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QE2100	Error occurred by notes remained in CST GS901 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE2200	Error occurred by notes remained in CST GS902 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE2500	Error occurred by notes remained in CST GS905 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE2Z00	Error occurred by notes remained in CST All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QE3100	Sensor auto calibration error in CST GS901 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE3200	Sensor auto calibration error in CST GS902 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE3500	Sensor auto calibration error in CST GS905 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE3Z00	Sensor auto calibration error in CST All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QE4100	Extern lights check error in CST GS901 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE4200	Extern lights check error in CST GS902 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5QE4500	Extern lights check error in CST GS905 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE4Z00	Extern lights check error in CST All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QE5100	Path error on transport path in CST GS901 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE5200	Path error on transport path in CST GS902 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE5500	Path error on transport path in CST GS905 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE5Z00	Path error on transport path in CST All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QE6100	Path error on sensor except for transport path in CST GS901 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE6200	Path error on sensor except for transport path in CST GS902 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE6500	Path error on sensor except for transport path in CST GS905 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE6Z00	Path error on sensor except for transport path in CST All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QE7100	Error occurred by the notes disorder in CST GS901 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE7200	Error occurred by the notes disorder in CST GS902 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE7500	Error occurred by the notes disorder in CST GS905 during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QE7Z00	Error occurred by the notes disorder in CST All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5QEC100	CST Miss-Pickup during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
5QEG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QEG200	CST Failure to move PP to stack position during Deposit for adjustment	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5QEG400	CST Failure to upward moving of PP during RC stack roller retreat movement during Deposit for adjustment	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5QEG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEG600	CST Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Deposit for adjustment	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5QEGA00	CST RC Solenoid Echo error during Deposit for adjustment	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
5QEGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5QEGER00	CST GS908 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5QEGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5QEGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5QEGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEGK00	CST RC Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5QEJ200	CST No Residue during Deposit for adjustment	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5QEJ300	CST Full,Bottom no detect before move RC PP to stack position during Deposit for adjustment	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5QEKL00	CST separation request notes is 0 during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QENL00	CST Requested notes is more than Residue notes,separation stop during Deposit for adjustment	1. Check CST actual count and SPL screen count.2. Setting CST count match actual count.3. Operate to initialize BRM(Recovery)
5QER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QERF00	CST Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QERP00	CST PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QES200	CST Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5QES300	CST RC Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QESA00	CST RC Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QESR00	CST Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QF0100	RC7 GSF01 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF0200	RC7 GSF02 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF0500	RC7 GSF05 Light Jam during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5QF0Z00	RC7 All Light Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF1100	RC7 GSF01 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF1200	RC7 GSF02 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF1500	RC7 GSF05 Dark Jam during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF1Z00	All RC7 Sensor Dark Jam during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF2100	Error occurred by notes remained in RC7 GSF01 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF2200	Error occurred by notes remained in RC7 GSF02 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5QF2500	Error occurred by notes remained in RC7 GSF05 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF2Z00	Error occurred by notes remained in All RC7 Sensor during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF3100	RC7 GSF01 Sensor auto calibration error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF3200	RC7 GSF02 Sensor auto calibration error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF3500	RC7 GSF05 Sensor auto calibration error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF3Z00	All RC7 Sensor auto calibration error during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF4100	RC7 GSF01 Extern lights check error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF4200	RC7 GSF02 Extern lights check error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF4500	RC7 GSF05 Extern lights check error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF4Z00	All RC7 Sensor Extern lights check error during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF5100	RC7 GSF01 Path error on transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF5200	RC7 GSF02 Path error on transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5QF5500	RC7 GSF05 Path error on transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF5Z00	All RC7 Sensor Path error on transport path during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF6100	RC7 GSF01 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF6200	RC7 GSF02 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF6500	RC7 GSF05 Path error on sensor except for transport path during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF6Z00	RC7 All Path error on sensor except for transport path during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QF7100	Error occurred by the notes disorder in RC7 GSF01 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF7200	Error occurred by the notes disorder in RC7 GSF02 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF7500	Error occurred by the notes disorder in RC7 GSF05 during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QF7Z00	Error occurred by the notes disorder in RC7 All during Deposit for adjustment	1. Operate to initialize BRM.(Recovery)
5QFG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QFG200	RC7 Failure to move PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5QFG400	RC7 Failure to upword moving of PP during RC7 stack roller retreat movement during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5QFG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFG600	RC7 Stack Roller retreat position disorder during RC Separation during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
5QFGA00	RC7 Solenoid Echo error during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
5QFGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5QFGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5QFGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5QFGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5QFGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFGK00	RC7 Stack Roller retreat fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Deposit for adjustment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5QFJ200	RC7 No Residue during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5QFJ300	Full,Bottom no detect before move RC7 PP to stack position during Deposit for adjustment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
5QFRF00	RC7 Feed Motor response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QFRP00	RC7 PP response timeout during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QFS200	RC7 Receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QFS300	RC7 Task not for separation receive separation command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QFSA00	RC7 Sub Task receive undefined command during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QFSR00	RC7 Sub Task for Wait Setting Error during Deposit for adjustment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5QUS100	USB Bulk Sequence Error during Deposit for adjustment.	1. Restart over AP-SP
5QUS300	USB Bulk Received Length Error during Deposit for adjustment.	1. Reboot the system

Problem Code	Problem Description	Troubleshooting
5QUS400	Message transmission Error from USB to Main Task during Deposit for adjustment.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5QUS500	Message reception Error from MainTask to USB during Deposit for adjustment.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5QUSCMD	Bulk command data check error during Deposit for adjustment. (USB communication failure)	1. Restart over AP-SP
5QUSCRC	CRC data check error during Deposit for adjustment. (USB communication failure)	1. Restart over AP-SP
5QUSLEN	Bulk length error during Deposit for adjustment. (USB communication failure)	1. Restart over AP-SP
5R1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R30100	RC3 GS301 Light Jam during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R30200	RC3 GS302 Light Jam during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5R30500	RC3 GS305 Light Jam during Read Initial Info	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5R31100	RC3 GS301 Dark Jam during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R31200	RC3 GS302 Dark Jam during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R31500	RC3 GS305 Dark Jam during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R32100	Error occurred by notes remained in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R32200	Error occurred by notes remained in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R32500	Error occurred by notes remained in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R33100	Sensor auto calibration error in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R33200	Sensor auto calibration error in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R33500	Sensor auto calibration error in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R34100	Extern lights check error in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5R34200	Extern lights check error in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R34500	Extern lights check error in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R35100	Path error on transport path in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R35200	Path error on transport path in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R35500	Path error on transport path in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R36100	Path error on sensor except for transport path in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R36200	Path error on sensor except for transport path in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R36500	Path error on sensor except for transport path in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R37100	Error occurred by the notes disorder in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R37200	Error occurred by the notes disorder in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5R37500	Error occurred by the notes disorder in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R3L100	Remaining notes stack process error in RC3 GS301 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R3L200	Remaining notes stack process error in RC3 GS302 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R3L500	Remaining notes stack process error in RC3 GS305 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5R57500	Error occurred by the notes disorder in RC5 GS505 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R5L100	Remaining notes stack process error in RC5 GS501 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5R5L200	Remaining notes stack process error in RC5 GS502 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R5L500	Remaining notes stack process error in RC5 GS505 during Read Initial Info	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5R5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during Read Initial Info	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5R6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during Read Initial Info	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5R6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5R7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R8HA01	GS801A Sensor Error during Read Initial Info	1. Check GS801A2. Operate to initialize BRM(Recovery)
5R8HA02	GS801B Sensor Error during Read Initial Info	1. Check GS801B2. Operate to initialize BRM(Recovery)
5R8HA03	GS801A, GS801B Sensor Error during Read Initial Info	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5R8HA04	GS802A Sensor Error during Read Initial Info	1. Check GS802A2. Operate to initialize BRM(Recovery)
5R8HA05	GS801A, GS802A Sensor Error during Read Initial Info	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5R8HA06	GS801B, GS802A Sensor Error during Read Initial Info	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5R8HA07	GS801A, GS801B, GS802A Sensor Error during Read Initial Info	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5R8HA08	GS802B Sensor Error during Read Initial Info	1. Check GS802B2. Operate to initialize BRM(Recovery)
5R8HA09	GS801A, GS802B Sensor Error during Read Initial Info	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5R8HA10	GS801B, GS802B Sensor Error during Read Initial Info	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5R8HA11	GS801A, GS801B, GS802B Sensor Error during Read Initial Info	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5R8HA12	GS802A, GS802B Sensor Error during Read Initial Info	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5R8HA13	GS801A, GS802A, GS802B Sensor Error during Read Initial Info	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5R8HA14	GS801B, GS802A, GS802B Sensor Error during Read Initial Info	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5R8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Read Initial Info	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5R8HB01	MR Sensor Level Error during Read Initial Info	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5R8HC02	UV_01 Sensor Level Error during Read Initial Info	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5R8HF03	CIS Shading data loading Fail during Read Initial Info	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5R8HF04	Detection DB Table loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF05	BC FPGA Data checksum Fail during Read Initial Info	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5R8HF06	BC FPGA Configuration Fail during Read Initial Info	1. Re-download BC FPGA2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
5R8HF07	BC FPGA Header Information Loading Fail during Read Initial Info	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5R8HF08	BC FPGA Initialize Fail during Read Initial Info	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5R8HF09	BC FPGA VERSION Fail during Read Initial Info	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5R8HF11	Detection DB #01 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF12	Detection DB #02 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF13	Detection DB #03 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF14	Detection DB #04 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF15	Detection DB #05 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF16	Detection DB #06 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF17	Detection DB #07 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF18	Detection DB #08 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF19	Detection DB #09 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HF20	Detection DB #10 loading Fail during Read Initial Info	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5R8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Read Initial Info	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Read Initial Info	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG03	BC Transaction Ready Fail When Receive BC READY Command during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5R8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Read Initial Info	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Read Initial Info	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Read Initial Info	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5R8HG07	Receive BC Unknown Command during Read Initial Info	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5R8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Read Initial Info	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Read Initial Info	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Read Initial Info	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5R8HG11	No Nation Code When Receive BC READY Command during Read Initial Info	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Read Initial Info	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5R8HG20	Fail to Initialize CIS When Receive BC READY Command during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5R8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5R8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5R8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5R8HG24	ENCODER Mode Set Error When Receive BC READY Command during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5R8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Read Initial Info	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Read Initial Info	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Read Initial Info	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5R8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Read Initial Info	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Read Initial Info	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Read Initial Info	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Read Initial Info	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Read Initial Info	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Read Initial Info	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Read Initial Info	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Read Initial Info	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Read Initial Info	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Read Initial Info	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Read Initial Info	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Read Initial Info	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Read Initial Info	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Read Initial Info	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5R8HG46	Bill Number Error When Receive Check No Write Command during Read Initial Info	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Read Initial Info	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Read Initial Info	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Read Initial Info	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HH01	Fail to Delete NAND FLASH during Read Initial Info	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5R8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Read Initial Info	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5R8HH03	Fail to Download Detection DB during Read Initial Info	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5R8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Read Initial Info	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5R8HH05	Detection DB Download File Check Error during Read Initial Info	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5R8HH06	Detection DB Download File Size Error during Read Initial Info	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5R8HH07	DB Table Save Error After Download Detection DB during Read Initial Info	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5R8HH08	Over Detection DB Download (Over 10) during Read Initial Info	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5R8HH09	Detection DB Header Information Error during Read Initial Info	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5R8HH10	EP Download Fail during Read Initial Info	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5R8HH11	EP Download Check Error during Read Initial Info	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5R8HH12	EP Download File Size Error during Read Initial Info	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5R8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Read Initial Info	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5R8HH14	BC FPGA Download Fail during Read Initial Info	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5R8HH15	Header Information Save Error After BC FPGA Download during Read Initial Info	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5R8HH16	Not Provide BC FPGA Download during Read Initial Info	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
5R8HH17	EEPROM READ/WRITE Error during Read Initial Info	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5R8HH18	Receive Unit Serial Number Undefined Option during Read Initial Info	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5R8HH19	Receive USB Undefined Command during Read Initial Info	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5R8HH20	No BC Process Note When Receive Image Upload Command during Read Initial Info	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH21	FC1 Set Error When Receive Image Upload Command during Read Initial Info	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH22	BC is Processing Note When Receive Image Upload Command during Read Initial Info	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH23	FC2 Set Error When Receive Image Upload Command during Read Initial Info	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH24	Not Provide Total Image Upload Function during Read Initial Info	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5R8HH25	Not Provide Note Number Detection Image Upload Function during Read Initial Info	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH26	FC2 Set Error When Receive Image Information Upload Command during Read Initial Info	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Read Initial Info	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Read Initial Info	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Read Initial Info	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Read Initial Info	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Read Initial Info	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5R8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Read Initial Info	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Read Initial Info	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Read Initial Info	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5R8HI01	RecogTask Messeage Timeout Error during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5R8HI02	ScanTask Messeage Timeout Error during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5R8HI03	UartTask Messeage Timeout Error during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5R8HI04	BcUsbTask Messeage Timeout Error during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5R8HJ01	Algorithm Initialize Fail during Read Initial Info	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HJ02	Algorithm Ready Fail during Read Initial Info	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HJ03	Algorithm Information Set Error during Read Initial Info	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5R8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Read Initial Info	1. Retry the operation
5R8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Read Initial Info	1. Check the number of CST Setting notes info
5R8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Read Initial Info	1. Check Withdrawal notes setting
5R8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Read Initial Info	1. Check Withdrawal notes info
5R8HS01	FPGA Write Data Error When Initialize Scan Driver during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5R8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS05	Not Process Shading When Initialize Scan Driver during Read Initial Info	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5R8HS08	Fail to Set DAC When Initialize Scan Driver during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS11	FPGA Write Data Error When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS13	Fail to Set CIS Led On Value When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS14	Fail to Set Source of Scan Ligh When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS15	Not Process Shading When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS17	Fail to Set AFE Chip When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS18	Fail to Set DAC When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS19	MR/UV/DD Sampling Start Error When BC Ready during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS1A	Fail to Set 2-Notes DAC When BC Ready during Read Initial Info	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5R8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Read Initial Info	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5R8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS28	Fail to Set DAC When Stop BC during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Read Initial Info	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5R8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Read Initial Info	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5R8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Read Initial Info	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5R8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Read Initial Info	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5R8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Read Initial Info	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
5R8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Read Initial Info	1. Retry the operation2. Change BC
5R8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Read Initial Info	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5R8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Read Initial Info	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5R8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Read Initial Info	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5R8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Read Initial Info	1. Retry the operation2. Change BC
5R8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Read Initial Info	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5R8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Read Initial Info	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5R8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Read Initial Info	1. Retry the operation2. Change BC
5R8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5R8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RAA100	UTC open Error before operation Read Initial Info	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5RAA200	TSK open Error before operation Read Initial Info	1. Open the upper unit. 2. Check the TSK open and close
5RAA300	BMU Inter Lock Error before operation Read Initial Info	1. Check BMU open and close
5RAA400	BMU open Error before operation Read Initial Info	1. Check BMU open and close
5RAA500	Replenishment CST open Error before operation Read Initial Info	1. Check the Transit CST installation
5RAA600	CSM open Error before operation Read Initial Info	1. Open the upper unit. 2. Check CSM Open/Close
5RAA800	BMD Inter Lock Error before operation Read Initial Info	1. Open the lower unit. 2. Check the BMD open and close
5RAA900	BMD open Error before operation Read Initial Info	1. Open the lower unit. 2. Check the BMD open and close

Problem Code	Problem Description	Troubleshooting
5RAAA00	BC Open Error before operation Read Initial Info	1. Open the upper unit. 2. Check BC Open/Close
5RAAB00	RC Full Error before operation Read Initial Info	1. Open the lower unit. 2. Check RC Full and remove notes
5RAAC00	RJC Full Error before operation Read Initial Info	1. Open the upper unit. 2. Check RJC Full and remove notes
5RAAD00	UTC Full Error before operation Read Initial Info	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5RAAE00	RTC Full Error before operation Read Initial Info	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5RAAF00	RC Empty Error before operation Read Initial Info	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5RAAG00	Suspected note RC open Error before operation Read Initial Info	1. Open the lower unit. 2. Check the RC removal and reinstall
5RAE100	Received operation command without Initial Info Set during Read Initial Info	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5RAE200	Status on not operation reception command during Read Initial Info	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5RAE300	Received operation command without System Info Read during Read Initial Info	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5RAE400	Transaction was executed without Initializing after power on during Read Initial Info	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5RAEE00	RBU RS485 communication sequence disorder during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5RAEF00	RBU RS485 connection line disorder during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5RAEL00	RBU communication was not ready after power on during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5RAH600	Failure to check clearing NVRAM during Read Initial Info	1. Operate to initialize BRM(Recovery)
5RBH100	RC1 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH200	RC2 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH300	RC3 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH400	RC4 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5RBH500	RC5 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH600	RC6 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH700	RC1 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH800	RC2 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBH900	RC3 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBHA00	RC4 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBHB00	RC5 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBHC00	RC6 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBHD00	RC1 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBHE00	RC2 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBHF00	RC3 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBHG00	RC4 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBHH00	RC5 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBHJ00	RC6 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBHK00	BMD Open Error During EEPROM Read/Write during Read Initial Info	1. Check the lower Unit load/removal
5RBHU00	BMD EEPROM Read Error during Read Initial Info	1. Replace RBU B/D
5RBHV00	BMD EEPROM Write Error during Read Initial Info	1. Replace RBU B/D
5RBHW00	BMD EEPROM Verify Error during Read Initial Info	1. Replace RBU B/D
5RBHX00	RC7 EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5RBHY00	RC7 EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RBHZ00	RC7 EEPROM Verify Error during Read Initial Info	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5RBR000	RBU Response Timeout during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RBR700	RBU Response Message Timeout during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RBS100	RBU RS-232 Seq Num Echo Error during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RBS200	RBU RS-232 MI Echo Error during Read Initial Info	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5REH800	CST EEPROM Write Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5REH900	CST EEPROM Read Error during Read Initial Info	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5RER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5RUS100	USB Bulk Sequence Error during Read Initial Info.	1. Restart over AP-SP

Problem Code	Problem Description	Troubleshooting
5RUS300	USB Bulk Received Length Error during Read Initial Info.	1. Reboot the system
5RUS400	Message transmission Error from USB to Main Task during Read Initial Info.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5RUS500	Message reception Error from MainTask to USB during Read Initial Info.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5RUSCMD	Bulk command data check error during Read Initial Info. (USB communication failure)	1. Restart over AP-SP
5RUSCRC	CRC data check error during Read Initial Info. (USB communication failure)	1. Restart over AP-SP
5RUSLEN	Bulk length error during Read Initial Info. (USB communication failure)	1. Restart over AP-SP
5SAE100	Received operation command without Initial Info Set during Counterfeil-bill-table registration/inquire command	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5SAE200	Status on not operation reception command during Counterfeil-bill-table registration/inquire command	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5SAE300	Received operation command without System Info Read during Counterfeil-bill-table registration/inquire command	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5SAE400	Transaction was executed without Initializing after power on during Counterfeil-bill-table registration/inquire command	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5SAEE00	RBU RS485 communication sequence disorder during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5SAEF00	RBU RS485 connection line disorder during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5SAEL00	RBU communication was not ready after power on during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5SAH600	Failure to check clearing NVRAM during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)
5SAH700	Failure to write specific character after NVRAM clear during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)
5SBR000	RBU Response Timeout during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5SBR700	RBU Response Message Timeout during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5SBS100	RBU RS-232 Seq Num Echo Error during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5SBS200	RBU RS-232 MI Echo Error during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5SBSS00	RBU Auto Calibration Command Parameter Error during Counterfeil-bill-table registration/inquire command	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5SUSCMD	Bulk command data check error when receiving BCU counterfeit-bill-table registration/inquire. (USB communication failure)	1. Restart over AP-SP
5SUSCRC	CRC data check error when receiving BCU counterfeit-bill-table registration/inquire. (USB communication failure)	1. Restart over AP-SP
5SUSLEN	Bulk length error when receiving BCU counterfeit-bill-table registration/inquire. (USB communication failure)	1. Restart over AP-SP
5T0FKF0	Fail to check GM002 motor encoder normal status during Module Test (Hall Count 0)	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5T0FKF1	Fail to check GM002 motor encoder normal status during Module Test	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5T1G200	RC1 Failure to move PP to stack position during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (A)4. Open the recycle cassette door(A) 5. Check cassette status to move stage up and down
5T1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5T1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5T1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5T2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5T2GA00	RC2 Solenoid Echo error during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5T2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5T2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T30100	RC3 GS301 Light Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T30200	RC3 GS302 Light Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T30500	RC3 GS305 Light Jam during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5T31100	RC3 GS301 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T31200	RC3 GS302 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T31500	RC3 GS305 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T32100	Error occurred by notes remained in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T32200	Error occurred by notes remained in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T32500	Error occurred by notes remained in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T33100	Sensor auto calibration error in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T33200	Sensor auto calibration error in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T33500	Sensor auto calibration error in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T34100	Extern lights check error in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T34200	Extern lights check error in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T34500	Extern lights check error in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T35100	Path error on transport path in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T35200	Path error on transport path in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T35500	Path error on transport path in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T36100	Path error on sensor except for transport path in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T36200	Path error on sensor except for transport path in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T36500	Path error on sensor except for transport path in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T37100	Error occurred by the notes disorder in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T37200	Error occurred by the notes disorder in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T37500	Error occurred by the notes disorder in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T3G200	RC3 Failure to move PP to stack position during Module Test	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
5T3G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5T3G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette

Problem Code	Problem Description	Troubleshooting
5T3GA00	RC3 RC Solenoid Echo error during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
5T3L100	Remaining notes stack process error in RC3 GS301 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T3L200	Remaining notes stack process error in RC3 GS302 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T3L500	Remaining notes stack process error in RC3 GS305 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T40100	RC4 GS401 Light Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T40200	RC4 GS402 Light Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T40500	RC4 GS405 Light Jam during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5T41100	RC4 GS401 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T41200	RC4 GS402 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T41500	RC4 GS405 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T42100	Error occurred by notes remained in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T42200	Error occurred by notes remained in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T42500	Error occurred by notes remained in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T43100	Sensor auto calibration error in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T43200	Sensor auto calibration error in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T43500	Sensor auto calibration error in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T44100	Extern lights check error in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T44200	Extern lights check error in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T44500	Extern lights check error in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T45100	Path error on transport path in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T45200	Path error on transport path in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T45500	Path error on transport path in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T46100	Path error on sensor except for transport path in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T46200	Path error on sensor except for transport path in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T46500	Path error on sensor except for transport path in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T47100	Error occurred by the notes disorder in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T47200	Error occurred by the notes disorder in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T47500	Error occurred by the notes disorder in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T4G400	RC4 Failure to upword moving of PP during RC4 stack roller retreat movement during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette (D)4. Open the recycle cassette door (D)5. Check cassette status to move stage up and down

Problem Code	Problem Description	Troubleshooting
5T4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5T4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5T4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5T4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5T4L100	Remaining notes stack process error in RC4 GS401 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T4L200	Remaining notes stack process error in RC4 GS402 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T4L500	Remaining notes stack process error in RC4 GS405 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5T50100	RC5 GS501 Light Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T50200	RC5 GS502 Light Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T50500	RC5 GS505 Light Jam during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5T51100	RC5 GS501 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T51200	RC5 GS502 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T51500	RC5 GS505 Dark Jam during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T52100	Error occurred by notes remained in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T52200	Error occurred by notes remained in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T52500	Error occurred by notes remained in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T53100	Sensor auto calibration error in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T53200	Sensor auto calibration error in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T53500	Sensor auto calibration error in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T54100	Extern lights check error in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T54200	Extern lights check error in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T54500	Extern lights check error in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T55100	Path error on transport path in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T55200	Path error on transport path in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T55500	Path error on transport path in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T56100	Path error on sensor except for transport path in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T56200	Path error on sensor except for transport path in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T56500	Path error on sensor except for transport path in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T57100	Error occurred by the notes disorder in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T57200	Error occurred by the notes disorder in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T57500	Error occurred by the notes disorder in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T5L100	Remaining notes stack process error in RC5 GS501 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T5L200	Remaining notes stack process error in RC5 GS502 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T5L500	Remaining notes stack process error in RC5 GS505 during Module Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5T5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T62100	CSM Residue Error during Module Test	1. Open the upper unit.2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5T62Z00	CSM Residue Error during during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5T6G100	Fail to move CSM BP to Stack Position during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5T6G200	Fail to move CSM BP to Deposit Position during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5T6G300	Fail to move CSM BP to Separation Position during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5T6G600	Fail to move CSM P-Roller to Home position during Module Test	1. Open the upper unit.2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5T6GB00	Fail to move CSM FP to Deposit Position during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5T6GD00	Fail to move CSM Lift to Up position during Module Test	1. Open the upper unit.2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
5T6GE00	Fail to move CSM Lift to Down position during Module Test	1. Open the upper unit. 2. Open the customer service module (CSM) shutter(1)3.Check the notes and substance inside of the CSM
5T6GF00	Fail to move CSM G-Roller to Homeposition during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5T6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during Module Test	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5T6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during Module Test	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5T6M200	CSM Inner Shutter Open Error during Module Test	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5T6M300	CSM Inner Shutter Close Error during Module Test	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5T6M400	CSM Outer Shutter Open Error during Module Test	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
5T6M500	CSM Outer Shutter Close Error during Module Test	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5T6M800	CSM Stopper Home position Fail during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5T6M900	CSM Stopper Stack position Fail during Module Test	1. Open the upper unit.2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5T6M900	CSM Stopper Stack position Fail during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5T6MB00	CSM Bill Supporter Up position Fail during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5T6MC00	CSM Bill Supporter Down position Fail during Module Test	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5T6P100	CSM PP Withdrawal(Stack) position Fail during Module Test	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5T6P200	CSM PP Deposit position Fail during Module Test	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5T6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5T70100	TSK GS701 Light Jam during Module Test	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5T70200	TSK GS702 Light Jam during Module Test	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5T70300	TSK GS703,4 Light Jam during Module Test	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5T70Z00	TSK All Light Jam during Module Test	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) Transport PATH(4)
5T71100	TSK GS701 Dark Jam during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T71200	TSK GS702 Dark Jam during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T71300	TSK GS703,4 Dark Jam during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T71Z00	TSK All Dark Jam during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T72100	Error occurred by notes remained in TSK GS701 during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T72200	Error occurred by notes remained in TSK GS702 during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T72300	Error occurred by notes remained in TSK GS703,4 during Module Test	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5T72Z00	Error occurred by notes remained in TSK All Sensor during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T77100	Error occurred by the notes disorder in TSK GS701 during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T77200	Error occurred by the notes disorder in TSK GS702 during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T77300	Error occurred by the notes disorder in TSK GS703,4 during Module Test	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5T77Z00	Error occurred by the notes disorder in TSK All during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5T7B200	Note detected in TSK Entry After Separate Ready during Module Test	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5T7C100	TSK Miss-pickup during separation during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the P-roller rubber
5T7C200	TSK Last note unclear during separation during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. Close the upper unit5. Initialize
5T7C300	TSK Last note No front detect during separataion during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate a knob of TSK(5)4. Remove notes and substance TSK(5)
5T7C400	TSK Last note No rear detect during separataion during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate a knob of TSK(5)4. Remove notes and substance TSK(5)
5T7C500	TSK Max Length NG occur 10 times Dark Jam during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5T7C600	TSK Max length note stucked in entry Light Jam during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T7C700	TSK Light Jam Retry Over Error during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T7C800	TSK Max length note go out from TSK during motor stop and stucked in BM during Module Test	1. Open the upper unit2. Open the TSK(Temporary StackKer) (5)3. Remove notes and substance on the PATH(4)
5T7C900	TSK Low speed control 30 times over Error during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Remove notes and substance TSK(5) 4. If the same symptoms occur frequently, change the TSK(5)
5T7CA00	TSK Incounted note is not Outcounted for 500ms during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T7F100	TSK GM701 stepout during separation during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
5T7F200	TSK GM701 stepout during stack during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5) 6. Rotate the knob of TSK(5) to find obstruction out
5T7F300	TSK GM701 F-Roller Homeposition fail during Module Test	1. Open the upper unit2. Open the TM(Test Module)3. Rotate the knob of TSK to check sensor(GS752) change 4. Rotate the knob of TSK(5) to find obstruction out
5T7G100	GM701 Return notes fail during Module Test	1. Open the upper unit2. Confirm to Rotate a knob of TSK(5) softly

Problem Code	Problem Description	Troubleshooting
5T7J100	TSK Full during Module Test	1. Open the upper unit2. Open the TSK(5)3. Check the notes remain in the TSK(5)4. Remove notes remain in the TSK
5T7J200	TSK Empty during ready separation during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
5T7L100	Remaining notes stack process error in TSK GS701 during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T7L200	Remaining notes stack process error in TSK GS702 during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T7L300	Remaining notes stack process error in TSK GS703,4 during Module Test	1. Open the upper unit2. Check the notes remain in the TSK(5)3. Check the GS701/GS702/GS706/GS707 Sensor4. Remove notes remain in the TSK
5T7LZ00	Remaining notes stack process error in TSK All during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Rotate the PP knob to back PP 4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5T7M100	TSK Stopper Home position for intialize fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5T7M200	TSK Stopper Stack position for intialize fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5T7M300	TSK Stopper Return note position for intialize fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if stopper was obstructed
5T7M400	TSK Stopper Lock FP Fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5T7M500	TSK Stopper Unlock FP Fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if FP(Front Plate) was obstructed
5T7P100	FP Sensor detect Dark Fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5T7P200	FP Sensor detect Light Fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob4. Check if FP(Front Plate) was obstructed to rotate
5T7P300	PP Press position fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
5T7P400	PP Bottom position fail during Module Test	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Check if PP(Push Plate) was obstructed to rotate PP knob
5T7Q700	TSK Door Open during operation in Module Test	1. Close the door of TSK(5)
5T7Q800	TSK Door Lock fail during operation in Module Test	1. Operate to initialize BRM(Recovery)2. Retry the operation.
5T7Q900	TSK Door Release fail during operation in Module Test	1. Operate to initialize BRM(Recovery)2. Retry the operation.

Problem Code	Problem Description	Troubleshooting
5T7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5T8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Module Test	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Module Test	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG03	BC Transaction Ready Fail When Receive BC READY Command during Module Test	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5T8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Module Test	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Module Test	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Module Test	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG07	Receive BC Unknown Command during Module Test	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5T8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Module Test	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Module Test	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Module Test	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5T8HG11	No Nation Code When Receive BC READY Command during Module Test	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Module Test	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5T8HG20	Fail to Initialize CIS When Receive BC READY Command during Module Test	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
5T8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Module Test	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5T8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Module Test	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5T8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Module Test	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5T8HG24	ENCODER Mode Set Error When Receive BC READY Command during Module Test	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5T8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Module Test	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Module Test	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Module Test	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Module Test	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Module Test	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Module Test	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Module Test	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Module Test	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Module Test	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Module Test	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5T8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Module Test	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Module Test	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Module Test	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Module Test	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Module Test	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Module Test	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Module Test	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG46	Bill Number Error When Receive Check No Write Command during Module Test	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Module Test	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Module Test	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Module Test	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HH01	Fail to Delete NAND FLASH during Module Test	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5T8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Module Test	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5T8HH03	Fail to Download Detection DB during Module Test	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5T8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Module Test	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5T8HH05	Detection DB Download File Check Error during Module Test	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5T8HH06	Detection DB Download File Size Error during Module Test	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5T8HH07	DB Table Save Error After Download Detection DB during Module Test	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5T8HH08	Over Detection DB Download (Over 10) during Module Test	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5T8HH09	Detection DB Header Information Error during Module Test	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5T8HH10	EP Download Fail during Module Test	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5T8HH11	EP Download Check Error during Module Test	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5T8HH12	EP Download File Size Error during Module Test	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5T8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Module Test	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5T8HH14	BC FPGA Download Fail during Module Test	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5T8HH15	Header Information Save Error After BC FPGA Download during Module Test	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5T8HH16	Not Provide BC FPGA Download during Module Test	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5T8HH17	EEPROM READ/WRITE Error during Module Test	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5T8HH18	Receive Unit Serial Number Undefined Option during Module Test	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5T8HH19	Receive USB Undefined Command during Module Test	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5T8HH20	No BC Process Note When Receive Image Upload Command during Module Test	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH21	FC1 Set Error When Receive Image Upload Command during Module Test	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH22	BC is Processing Note When Receive Image Upload Command during Module Test	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH23	FC2 Set Error When Receive Image Upload Command during Module Test	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH24	Not Provide Total Image Upload Function during Module Test	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5T8HH25	Not Provide Note Number Detection Image Upload Function during Module Test	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH26	FC2 Set Error When Receive Image Information Upload Command during Module Test	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Module Test	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Module Test	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Module Test	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Module Test	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Module Test	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Module Test	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Module Test	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Module Test	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5T8HI01	RecogTask Messeage Timeout Error during Module Test	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5T8HI02	ScanTask Messeage Timeout Error during Module Test	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5T8HI03	UartTask Messeage Timeout Error during Module Test	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5T8HI04	BcUsbTask Messeage Timeout Error during Module Test	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5T8HJ01	Algorithm Initialize Fail during Module Test	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5T8HJ02	Algorithm Ready Fail during Module Test	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HJ03	Algorithm Information Set Error during Module Test	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5T8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Module Test	1. Retry the operation
5T8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Module Test	1. Check the number of CST Setting notes info
5T8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Module Test	1. Check Withdrawal notes setting
5T8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Module Test	1. Check Withdrawal notes info
5T8HS01	FPGA Write Data Error When Initialize Scan Driver during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS05	Not Process Shading When Initialize Scan Driver during Module Test	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5T8HS08	Fail to Set DAC When Initialize Scan Driver during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS11	FPGA Write Data Error When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS13	Fail to Set CIS Led On Value When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS14	Fail to Set Source of Scan Ligh When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS15	Not Process Shading When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS17	Fail to Set AFE Chip When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS18	Fail to Set DAC When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5T8HS19	MR/UV/DD Sampling Start Error When BC Ready during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS1A	Fail to Set 2-Notes DAC When BC Ready during Module Test	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5T8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Module Test	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5T8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS28	Fail to Set DAC When Stop BC during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Module Test	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5T8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Module Test	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5T8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Module Test	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5T8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Module Test	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5T8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Module Test	1. Retry the operation2. Change BC
5T8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Module Test	1. Retry the operation2. Change BC
5T8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Module Test	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5T8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Module Test	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5T8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Module Test	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5T8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Module Test	1. Retry the operation2. Change BC
5T8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Module Test	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5T8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Module Test	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5T8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Module Test	1. Retry the operation2. Change BC
5T8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5T8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8S100	BCU response MI error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8S200	BCU response BCC error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8S300	BCU response Sub MI error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8S400	BCU response Parameter error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5T8S900	BCU response Timeout Error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TAA100	UTC open Error before operation Module Test	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5TAA200	TSK open Error before operation Module Test	1. Open the upper unit. 2. Check the TSK open and close
5TAA300	BMU Inter Lock Error before operation Module Test	1. Check BMU open and close
5TAA400	BMU open Error before operation Module Test	1. Check BMU open and close
5TAA500	Replenishment CST open Error before operation Module Test	1. Check the Transit CST installation
5TAA600	CSM open Error before operation Module Test	1. Open the upper unit. 2. Check CSM Open/Close
5TAA800	BMD Inter Lock Error before operation Module Test	1. Open the lower unit. 2. Check the BMD open and close
5TAA900	BMD open Error before operation Module Test	1. Open the lower unit. 2. Check the BMD open and close
5TAAA00	BC Open Error before operation Module Test	1. Open the upper unit. 2. Check BC Open/Close
5TAAB00	RC Full Error before operation Module Test	1. Open the lower unit. 2. Check RC Full and remove notes
5TAAC00	RJC Full Error before operation Module Test	1. Open the upper unit. 2. Check RJC Full and remove notes
5TAAD00	UTC Full Error before operation Module Test	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC

Problem Code	Problem Description	Troubleshooting
5TAAE00	RTC Full Error before operation Module Test	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5TAAF00	RC Empty Error before operation Module Test	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5TAAG00	Suspected note RC open Error before operation Module Test	1. Open the lower unit. 2. Check the RC removal and reinstall
5TAE100	Received operation command without Initial Info Set during Module Test	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5TAE200	Status on not operation reception command during Module Test	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5TAE300	Received operation command without System Info Read during Module Test	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5TAE400	Transaction was executed without Initializing after power on during Module Test	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5TAEE00	RBU RS485 communication sequence disorder during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5TAEF00	RBU RS485 connection line disorder during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5TAEL00	RBU communication was not ready after power on during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5TAH600	Failure to check clearing NVRAM during Module Test	1. Operate to initialize BRM(Recovery)
5TAH700	Failure to write specific character after NVRAM clear during Module Test	1. Operate to initialize BRM(Recovery)
5TBR000	RBU Response Timeout during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TBR700	RBU Response Message Timeout during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TBS100	RBU RS-232 Seq Num Echo Error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TBS200	RBU RS-232 MI Echo Error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TBSS00	RBU Auto Calibration Command Parameter Error during Module Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TCGS00	RC6 RJC Press position fail during Module Test	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
5TCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Module Test	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5TCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TE1500	CST GS905 Dark Jam during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5TE2500	Error occurred by notes remained in CST GS905 during Initialize on Unit Test	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5TEG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5TEG200	CST Failure to move PP to stack position during Initialize on Unit Test	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5TEG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Initialize on Unit Test	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5TEG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEG600	CST Stack Roller retreat position disorder during RC Separation during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Initialize on Unit Test	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette

Problem Code	Problem Description	Troubleshooting
5TEGA00	CST RC Solenoid Echo error during Initialize on Unit Test	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
5TEGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5TEGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5TEGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5TEGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEGK00	CST RC Stack Roller retreat fail (Motor speed error) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5TEJ200	CST No Residue during Initialize on Unit Test	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5TEJ300	CST Full,Bottom no detect before move RC PP to stack position during Initialize on Unit Test	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5TEL100	Remaining notes stack process error in CST GS901 during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5TEL200	Remaining notes stack process error in CST GS902 during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5TEL500	Remaining notes stack process error in CST GS905 during Initialize on Unit Test	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5TELZ00	Remaining notes stack process error in CST All during Initialize on Unit Test	1. Operate to initialize BRM.(Recovery)
5TER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TERF00	CST Feed Motor response timeout during Initialize on Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TERP00	CST PP response timeout during Initialize on Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TES200	CST Receive undefined command during Initialize on Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TES300	CST RC Task not for separation receive separation command during Initialize on Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TESA00	CST RC Sub Task receive undefined command during Initialize on Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TESR00	CST Sub Task for Wait Setting Error during Initialize on Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5TUS100	USB Bulk Sequence Error during Module Test.	1. Restart over AP-SP
5TUS300	USB Bulk Received Length Error during Module Test.	1. Reboot the system
5TUS400	Message transmission Error from USB to Main Task during Module Test.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5TUS500	Message reception Error from MainTask to USB during Module Test.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization.
5TUSCMD	Bulk command data check error during Module Test. (USB communication failure)	1. Restart over AP-SP
5TUSCRC	CRC data check error during Module Test. (USB communication failure)	1. Restart over AP-SP
5TUSLEN	Bulk length error during Module Test. (USB communication failure)	1. Restart over AP-SP
5U1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5U5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during Download	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5U6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during Download	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5U6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5U7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U8HA01	GS801A Sensor Error during Download	1. Check GS801A2. Operate to initialize BRM(Recovery)
5U8HA02	GS801B Sensor Error during Download	1. Check GS801B2. Operate to initialize BRM(Recovery)
5U8HA03	GS801A, GS801B Sensor Error during Download	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5U8HA04	GS802A Sensor Error during Download	1. Check GS802A2. Operate to initialize BRM(Recovery)
5U8HA05	GS801A, GS802A Sensor Error during Download	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5U8HA06	GS801B, GS802A Sensor Error during Download	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5U8HA07	GS801A, GS801B, GS802A Sensor Error during Download	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5U8HA08	GS802B Sensor Error during Download	1. Check GS802B2. Operate to initialize BRM(Recovery)
5U8HA09	GS801A, GS802B Sensor Error during Download	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5U8HA10	GS801B, GS802B Sensor Error during Download	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5U8HA11	GS801A, GS801B, GS802B Sensor Error during Download	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5U8HA12	GS802A, GS802B Sensor Error during Download	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5U8HA13	GS801A, GS802A, GS802B Sensor Error during Download	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5U8HA14	GS801B, GS802A, GS802B Sensor Error during Download	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5U8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Download	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5U8HB01	MR Sensor Level Error during Download	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5U8HC02	UV_01 Sensor Level Error during Download	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5U8HF03	CIS Shading data loading Fail during Download	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5U8HF04	Detection DB Table loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF05	BC FPGA Data checksum Fail during Download	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5U8HF06	BC FPGA Configuration Fail during Download	1. Re-download BC FPGA2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
5U8HF07	BC FPGA Header Information Loading Fail during Download	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5U8HF08	BC FPGA Initialize Fail during Download	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5U8HF09	BC FPGA VERSION Fail during Download	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5U8HF11	Detection DB #01 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF12	Detection DB #02 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF13	Detection DB #03 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF14	Detection DB #04 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF15	Detection DB #05 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF16	Detection DB #06 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF17	Detection DB #07 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF18	Detection DB #08 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF19	Detection DB #09 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HF20	Detection DB #10 loading Fail during Download	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5U8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Download	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Download	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG03	BC Transaction Ready Fail When Receive BC READY Command during Download	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5U8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Download	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Download	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit/Withdrawal/Stack Direction ) during Download	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5U8HG07	Receive BC Unknown Command during Download	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5U8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Download	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Download	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Download	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5U8HG11	No Nation Code When Receive BC READY Command during Download	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Download	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5U8HG20	Fail to Initialize CIS When Receive BC READY Command during Download	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5U8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Download	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5U8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Download	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5U8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Download	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5U8HG24	ENCODER Mode Set Error When Receive BC READY Command during Download	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5U8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Download	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Download	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Download	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5U8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Download	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Download	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Download	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Download	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Download	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Download	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Download	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Download	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Download	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Download	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Download	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Download	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Download	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Download	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5U8HG46	Bill Number Error When Receive Check No Write Command during Download	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Download	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Download	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Download	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HH01	Fail to Delete NAND FLASH during Download	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5U8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Download	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5U8HH03	Fail to Download Detection DB during Download	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5U8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Download	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5U8HH05	Detection DB Download File Check Error during Download	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5U8HH06	Detection DB Download File Size Error during Download	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5U8HH07	DB Table Save Error After Download Detection DB during Download	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5U8HH08	Over Detection DB Download (Over 10) during Download	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5U8HH09	Detection DB Header Information Error during Download	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5U8HH10	EP Download Fail during Download	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5U8HH11	EP Downlaod Check Error during Download	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5U8HH12	EP Download File Size Error during Download	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5U8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Download	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5U8HH14	BC FPGA Download Fail during Download	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5U8HH15	Header Information Save Error After BC FPGA Download during Download	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5U8HH16	Not Provide BC FPGA Download during Download	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
5U8HH17	EEPROM READ/WRITE Error during Download	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5U8HH18	Receive Unit Serial Number Undefined Option during Download	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5U8HH19	Receive USB Undefined Command during Download	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5U8HH20	No BC Process Note When Receive Image Upload Command during Download	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH21	FC1 Set Error When Receive Image Upload Command during Download	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH22	BC is Processing Note When Receive Image Upload Command during Download	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH23	FC2 Set Error When Receive Image Upload Command during Download	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH24	Not Provide Total Image Upload Function during Download	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5U8HH25	Not Provide Note Number Detection Image Upload Function during Download	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH26	FC2 Set Error When Receive Image Information Upload Command during Download	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Download	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Download	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Download	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Download	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Download	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5U8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Download	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Download	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Download	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5U8HI01	RecogTask Messeage Timeout Error during Download	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5U8HI02	ScanTask Messeage Timeout Error during Download	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5U8HI03	UartTask Messeage Timeout Error during Download	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5U8HI04	BcUsbTask Messeage Timeout Error during Download	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5U8HJ01	Algorithm Initialize Fail during Download	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HJ02	Algorithm Ready Fail during Download	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HJ03	Algorithm Information Set Error during Download	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5U8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Download	1. Retry the operation
5U8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Download	1. Check the number of CST Setting notes info
5U8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Download	1. Check Withdrawal notes setting
5U8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Download	1. Check Withdrawal notes info
5U8HS01	FPGA Write Data Error When Initialize Scan Driver during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5U8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS05	Not Process Shading When Initialize Scan Driver during Download	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5U8HS08	Fail to Set DAC When Initialize Scan Driver during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS11	FPGA Write Data Error When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS13	Fail to Set CIS Led On Value When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS14	Fail to Set Source of Scan Ligh When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS15	Not Process Shading When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS17	Fail to Set AFE Chip When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS18	Fail to Set DAC When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS19	MR/UV/DD Sampling Start Error When BC Ready during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS1A	Fail to Set 2-Notes DAC When BC Ready during Download	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5U8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Download	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5U8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS28	Fail to Set DAC When Stop BC during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Download	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5U8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Download	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5U8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Download	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5U8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Download	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5U8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Download	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
5U8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Download	1. Retry the operation2. Change BC
5U8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Download	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5U8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Download	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5U8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Download	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5U8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Download	1. Retry the operation2. Change BC
5U8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Download	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5U8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Download	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5U8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Download	1. Retry the operation2. Change BC
5U8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5U8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UAE100	Received operation command without Initial Info Set during Download	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5UAE200	Status on not operation reception command during Download	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5UAE300	Received operation command without System Info Read during Download	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5UAE400	Transaction was executed without Initializing after power on during Download	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5UAEEO0	RBU RS485 communication sequence disorder during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5UAEF00	RBU RS485 connection line disorder during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization

Problem Code	Problem Description	Troubleshooting
5UAELO0	RBU communication was not ready after power on during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5UAH600	Failure to check clearing NVRAM during Download	1. Operate to initialize BRM(Recovery)
5UHA00	Checksum disorder when MAIN EP Download	1. Check the download bin file2. Change the bin file
5UAHB00	Flash Rom write failure when MAIN EP Download	1. Change MAIN board when same error occurred after retry download
5UAHC00	EP downgrade of this version is not supported	1. Download higher version EP2. Download EP after decryption
5UBH000	RC7 Dip SW Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH100	RC1 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH200	RC2 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH300	RC3 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH400	RC4 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH500	RC5 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH600	RC6 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH700	RC1 EEPROM Write Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH800	RC2 EEPROM Write Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBH900	RC3 EEPROM Write Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHA00	Effectiveness disorder when RBU B/D Download.	1. Check the download bin file2. Change the bin file
5UBHB00	Checksum disorder when RBU B/D Download.	1. Check the download bin file2. Change the bin file
5UBHC00	Unit name disorder of RBU EP bin file's head when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHD00	Unit name disorder of RBU Boot bin file's head file when RBU EP Download.	1. Check the download bin file2. Change the bin file

Problem Code	Problem Description	Troubleshooting
5SUBHE00	Unit name disorder of RBU FPGA bin file's head file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5SUBHF00	Other disorder about effectiveness when RBU EP Download.	1. Check the download bin file2. Change the bin file
5SUBHG00	Program Id disorder of RBU EP bin file's head when RBU EP Download.	1. Check the download bin file2. Change the bin file
5SUBHH00	Program Id disorder of RBU Boot bin file's head file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHJ00	Effectiveness disorder of RBU FPGA bin file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHK00	Program Id disorder of RBU FPGA bin file's head file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHL00	Error of the kind of RBU Bin file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHM00	Unit name disorder of RBU PreLoader bin file's head file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHN00	Program Id disorder of RBU PreLoader bin file's head file when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHP00	RC2 Dip SW Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHQ00	RC3 Dip SW Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHR00	RC4 Dip SW Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHS00	RC5 Dip SW Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHT00	RC6 Dip SW Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHU00	BMD EEPROM Read Error during Download	1. Replace RBU B/D
5UBHV00	BMD EEPROM Write Error during Download	1. Replace RBU B/D
5UBHW00	BMD EEPROM Verify Error during Download	1. Replace RBU B/D
5UBHX00	RC7 EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UBHY00	Unit name disorder of RBU EP bin file's head when RBU EP Download.	1. Check the download bin file2. Change the bin file
5UBHZ00	Effectiveness disorder of RBU FPGA bin file when RBU EP Download.	1. Check the download bin file2. Change the bin file

Problem Code	Problem Description	Troubleshooting
5UBR000	RBU Response Timeout during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UBR700	RBU Response Message Timeout during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UBS100	RBU RS-232 Seq Num Echo Error during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UBS200	RBU RS-232 MI Echo Error during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UBSC00	RBU Download Data Size Error during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UBSD00	RBU Download Data Check sum Error during Download	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UCMD00	Bulk command data check error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5UCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UCRC00	CRC data check error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5UEH800	CST EEPROM Write Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UEH900	CST EEPROM Read Error during Download	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5UER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5UER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5UER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5ULEN00	Bulk length error during Deposit Ready. (USB communication failure)	1. Restart over AP-SP
5UUS100	USB Bulk Sequence Error during Download.	1. Restart over AP-SP
5UUS300	USB Bulk Received Length Error during Download.	1. Reboot the system
5UUS400	Message transmission Error from USB to Main Task during Download.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5UUS500	Message reception Error from MainTask to USB during Download.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5UUSCMD	Bulk command data check error. (USB communication failure)	1. Restart over AP-SP
5UUSCRC	CRC data check error. (USB communication failure)	1. Restart over AP-SP
5UUSLEN	Bulk length error. (USB communication failure)	1. Restart over AP-SP
5V1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5V47100	Error occurred by the notes disorder in RC4 GS401 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V47200	Error occurred by the notes disorder in RC4 GS402 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5V47500	Error occurred by the notes disorder in RC4 GS405 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V4L100	Remaining notes stack process error in RC4 GS401 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V4L200	Remaining notes stack process error in RC4 GS402 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V4L500	Remaining notes stack process error in RC4 GS405 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V50100	RC5 GS501 Light Jam during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V50200	RC5 GS502 Light Jam during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V50500	RC5 GS505 Light Jam during System Info Read	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5V51100	RC5 GS501 Dark Jam during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5V51200	RC5 GS502 Dark Jam during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V51500	RC5 GS505 Dark Jam during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V52100	Error occurred by notes remained in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V52200	Error occurred by notes remained in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V52500	Error occurred by notes remained in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V53100	Sensor auto calibration error in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V53200	Sensor auto calibration error in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V53500	Sensor auto calibration error in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V54100	Extern lights check error in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V54200	Extern lights check error in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5V54500	Extern lights check error in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V55100	Path error on transport path in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V55200	Path error on transport path in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V55500	Path error on transport path in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V56100	Path error on sensor except for transport path in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V56200	Path error on sensor except for transport path in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V56500	Path error on sensor except for transport path in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V57100	Error occurred by the notes disorder in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V57200	Error occurred by the notes disorder in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V57500	Error occurred by the notes disorder in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5V5L100	Remaining notes stack process error in RC5 GS501 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V5L200	Remaining notes stack process error in RC5 GS502 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V5L500	Remaining notes stack process error in RC5 GS505 during System Info Read	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5V5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V6H100	CSM EEPROM Write Error (System info inquiry/EEPROM Write) during System Info Read	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5V6H200	CSM EEPROM Read Error (System info inquiry/EEPROM Read/Wrtie) during System Info Read	1. Check CSM EEPROM2. Cehck CSM EEPROM connection3. Replace CSM B/D if same error occurs during EEPROM R/W
5V6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5V7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8HA01	GS801A Sensor Error during System Info Read	1. Check GS801A2. Operate to initialize BRM(Recovery)
5V8HA02	GS801B Sensor Error during System Info Read	1. Check GS801B2. Operate to initialize BRM(Recovery)
5V8HA03	GS801A, GS801B Sensor Error during System Info Read	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5V8HA04	GS802A Sensor Error during System Info Read	1. Check GS802A2. Operate to initialize BRM(Recovery)
5V8HA05	GS801A, GS802A Sensor Error during System Info Read	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5V8HA06	GS801B, GS802A Sensor Error during System Info Read	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5V8HA07	GS801A, GS801B, GS802A Sensor Error during System Info Read	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5V8HA08	GS802B Sensor Error during System Info Read	1. Check GS802B2. Operate to initialize BRM(Recovery)
5V8HA09	GS801A, GS802B Sensor Error during System Info Read	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5V8HA10	GS801B, GS802B Sensor Error during System Info Read	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5V8HA11	GS801A, GS801B, GS802B Sensor Error during System Info Read	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5V8HA12	GS802A, GS802B Sensor Error during System Info Read	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5V8HA13	GS801A, GS802A, GS802B Sensor Error during System Info Read	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5V8HA14	GS801B, GS802A, GS802B Sensor Error during System Info Read	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5V8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during System Info Read	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5V8HB01	MR Sensor Level Error during System Info Read	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5V8HC02	UV_01 Sensor Level Error during System Info Read	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5V8HF03	CIS Shading data loading Fail during System Info Read	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5V8HF04	Detection DB Table loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF05	BC FPGA Data checksum Fail during System Info Read	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5V8HF06	BC FPGA Configuration Fail during System Info Read	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5V8HF07	BC FPGA Header Information Loading Fail during System Info Read	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5V8HF08	BC FPGA Initialize Fail during System Info Read	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5V8HF09	BC FPGA VERSION Fail during System Info Read	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5V8HF11	Detection DB #01 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF12	Detection DB #02 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF13	Detection DB #03 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF14	Detection DB #04 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF15	Detection DB #05 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF16	Detection DB #06 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF17	Detection DB #07 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF18	Detection DB #08 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF19	Detection DB #09 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HF20	Detection DB #10 loading Fail during System Info Read	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5V8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during System Info Read	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during System Info Read	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG03	BC Transaction Ready Fail When Receive BC READY Command during System Info Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5V8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during System Info Read	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5V8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during System Info Read	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during System Info Read	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG07	Receive BC Unknown Command during System Info Read	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5V8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during System Info Read	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during System Info Read	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during System Info Read	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5V8HG11	No Nation Code When Receive BC READY Command during System Info Read	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during System Info Read	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5V8HG20	Fail to Initialize CIS When Receive BC READY Command during System Info Read	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5V8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during System Info Read	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5V8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during System Info Read	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5V8HG23	DD Sensor DAC Set Error When Receive BC READY Command during System Info Read	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5V8HG24	ENCODER Mode Set Error When Receive BC READY Command during System Info Read	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5V8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during System Info Read	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5V8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during System Info Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during System Info Read	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during System Info Read	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during System Info Read	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during System Info Read	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during System Info Read	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command <b>위조지폐 목록 검색 구분 설정 오류</b> (Classification Value is Not 1, 2, 3) during System Info Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during System Info Read	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during System Info Read	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during System Info Read	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during System Info Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during System Info Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during System Info Read	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during System Info Read	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5V8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during System Info Read	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during System Info Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG46	Bill Number Error When Receive Check No Write Command during System Info Read	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during System Info Read	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG48	Bill Number Table CRC Error When Receive Check No Write Command during System Info Read	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during System Info Read	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HH01	Fail to Delete NAND FLASH during System Info Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5V8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during System Info Read	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5V8HH03	Fail to Download Detection DB during System Info Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5V8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during System Info Read	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5V8HH05	Detection DB Download File Check Error during System Info Read	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5V8HH06	Detection DB Download File Size Error during System Info Read	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5V8HH07	DB Table Save Error After Download Detection DB during System Info Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5V8HH08	Over Detection DB Download (Over 10) during System Info Read	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5V8HH09	Detection DB Header Information Error during System Info Read	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5V8HH10	EP Download Fail during System Info Read	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5V8HH11	EP Download Check Error during System Info Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5V8HH12	EP Download File Size Error during System Info Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5V8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during System Info Read	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5V8HH14	BC FPGA Download Fail during System Info Read	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5V8HH15	Header Information Save Error After BC FPGA Download during System Info Read	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5V8HH16	Not Provide BC FPGA Download during System Info Read	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5V8HH17	EEPROM READ/WRITE Error during System Info Read	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5V8HH18	Receive Unit Serial Number Undefined Option during System Info Read	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5V8HH19	Receive USB Undefined Command during System Info Read	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5V8HH20	No BC Process Note When Receive Image Upload Command during System Info Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH21	FC1 Set Error When Receive Image Upload Command during System Info Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH22	BC is Processing Note When Receive Image Upload Command during System Info Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH23	FC2 Set Error When Receive Image Upload Command during System Info Read	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH24	Not Provide Total Image Upload Function during System Info Read	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5V8HH25	Not Provide Note Number Detection Image Upload Function during System Info Read	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH26	FC2 Set Error When Receive Image Information Upload Command during System Info Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during System Info Read	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during System Info Read	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during System Info Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5V8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during System Info Read	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during System Info Read	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during System Info Read	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during System Info Read	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during System Info Read	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5V8HI01	RecogTask Messeage Timeout Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5V8HI02	ScanTask Messeage Timeout Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5V8HI03	UartTask Messeage Timeout Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5V8HI04	BcUsbTask Messeage Timeout Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5V8HJ01	Algorithm Initialize Fail during System Info Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HJ02	Algorithm Ready Fail during System Info Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HJ03	Algorithm Information Set Error during System Info Read	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5V8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during System Info Read	1. Retry the operation
5V8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during System Info Read	1. Check the number of CST Setting notes info
5V8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during System Info Read	1. Check Withdrawal notes setting
5V8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during System Info Read	1. Check Withdrawal notes info

Problem Code	Problem Description	Troubleshooting
5V8HS01	FPGA Write Data Error When Initialize Scan Driver during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS05	Not Process Shading When Initialize Scan Driver during System Info Read	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5V8HS08	Fail to Set DAC When Initialize Scan Driver during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS11	FPGA Write Data Error When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS13	Fail to Set CIS Led On Value When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS14	Fail to Set Source of Scan Ligh When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS15	Not Process Shading When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS17	Fail to Set AFE Chip When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS18	Fail to Set DAC When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS19	MR/UV/DD Sampling Start Error When BC Ready during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS1A	Fail to Set 2-Notes DAC When BC Ready during System Info Read	1. Check whether double notes sensor is contaminant or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5V8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during System Info Read	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5V8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS28	Fail to Set DAC When Stop BC during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS29	MR/UV/DD Sampling Stop Error When Stop BC during System Info Read	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5V8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during System Info Read	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation

Problem Code	Problem Description	Troubleshooting
5V8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during System Info Read	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5V8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during System Info Read	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5V8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during System Info Read	1. Retry the operation2. Change BC
5V8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during System Info Read	1. Retry the operation2. Change BC
5V8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during System Info Read	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5V8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during System Info Read	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5V8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during System Info Read	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5V8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during System Info Read	1. Retry the operation2. Change BC
5V8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during System Info Read	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5V8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during System Info Read	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opeartion4. Change BC
5V8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during System Info Read	1. Retry the operation2. Change BC
5V8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8S100	BCU response MI error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8S200	BCU response BCC error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8S300	BCU response Sub MI error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5V8S400	BCU response Parameter error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5V8S900	BCU response Timeout Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VAA100	UTC open Error before operation System Info Read	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5VAA200	TSK open Error before operation System Info Read	1. Open the upper unit. 2. Check the TSK open and close
5VAA300	BMU Inter Lock Error before operation System Info Read	1. Check BMU open and close
5VAA400	BMU open Error before operation System Info Read	1. Check BMU open and close
5VAA500	Replenishment CST open Error before operation System Info Read	1. Check the Transit CST installation
5VAA600	CSM open Error before operation System Info Read	1. Open the upper unit. 2. Check CSM Open/Close
5VAA800	BMD Inter Lock Error before operation System Info Read	1. Open the lower unit. 2. Check the BMD open and close
5VAA900	BMD open Error before operation System Info Read	1. Open the lower unit. 2. Check the BMD open and close
5VAAA00	BC Open Error before operation System Info Read	1. Open the upper unit. 2. Check BC Open/Close
5VAAB00	RC Full Error before operation System Info Read	1. Open the lower unit. 2. Check RC Full and remove notes
5VAAC00	RJC Full Error before operation System Info Read	1. Open the upper unit. 2. Check RJC Full and remove notes
5VAAD00	UTC Full Error before operation System Info Read	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5VAAE00	RTC Full Error before operation System Info Read	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5VAAF00	RC Empty Error before operation System Info Read	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5VAAG00	Suspected note RC open Error before operation System Info Read	1. Open the lower unit. 2. Check the RC removal and reinstall
5VAAM00	RT/RJC in the place of DPC in BRM53, BRM54 System Info Read	1. Check the Status of Cassette setting2. Initialize
5VAAN00	Un-supported BRM Series in System info inquiry System Info Read	1. Check the Status of Cassette setting2. Initialize
5VAAP00	The installed cassette type does not match the cassette type of the BRM series during System Info Read.	1. Check the Status of Cassette setting2. Initialize
5VAE100	Received operation command without Initial Info Set during System Info Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization

Problem Code	Problem Description	Troubleshooting
5VAE200	Status on not operation reception command during System Info Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5VAE300	Received operation command without System Info Read during System Info Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5VAE400	Transaction was executed without Initializing after power on during System Info Read	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5VAEE00	RBU RS485 communication sequence disorder during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5VAEF00	RBU RS485 connection line disorder during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5VAEL00	RBU communication was not ready after power on during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5VAH600	Failure to check clearing NVRAM during System Info Read	1. Operate to initialize BRM(Recovery)
5VAH900	Transit CST EEPROM read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VAHE00	Transit CST Open Error during Transit CST EEPROM read in the System Info Read	1. Check the Transit CST installation
5VBH000	RC7 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBH100	RC1 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBH200	RC2 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBH300	RC3 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBH400	RC4 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBH500	RC5 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBH600	RC6 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHH00	RC5 EEPROM Verify Error during System Info Read	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5VBHK00	BMD Open Error During EEPROM Read/Write during System Info Read	1. Check the lower Unit load/removal

Problem Code	Problem Description	Troubleshooting
5VBHL00	BMD Open Error during Check RC Type during System Info Read	1. Check the lower Unit load/removal
5VBHM00	Set undefined BRM Series during System Info Read	1. Check the RBU's Type Dip Switch2. Replace the RBU B/D
5VBHN00	RC1 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHP00	RC2 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHQ00	RC3 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHR00	RC4 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHS00	RC5 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHT00	RC6 Dip SW Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBHU00	BMD EEPROM Read Error during System Info Read	1. Replace RBU B/D
5VBHX00	RC7 EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VBR000	RBU Response Timeout during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VBR700	RBU Response Message Timeout during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VBS100	RBU RS-232 Seq Num Echo Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VBS200	RBU RS-232 MI Echo Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VBSS00	RBU Auto Calibration Command Parameter Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VBST00	RBU RTC Set Time valid Error during System Info Read	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5VCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VEH800	CST EEPROM Write Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VEH900	CST EEPROM Read Error during System Info Read	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5VER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5VUS100	USB Bulk Sequence Error during System Info Read.	1. Restart over AP-SP
5VUS300	USB Bulk Received Length Error during System Info Read.	1. Reboot the system
5VUS400	Message transmission Error from USB to Main Task during System Info Read.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5VUS500	Message reception Error from MainTask to USB during System Info Read.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5VUSCMD	Bulk command data check error during System Info Read. (USB communication failure)	1. Restart over AP-SP
5VUSCRC	CRC data check error during System Info Read. (USB communication failure)	1. Restart over AP-SP
5VUSLEN	Bulk length error during System Info Read. (USB communication failure)	1. Restart over AP-SP
5W1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5W1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W1SZ00	No Note set in RC1, Operation Mode is for Deposit, Withdrawal,both during Initial Info set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W2SZ00	No Note set in RC2, Operation Mode is for Deposit, Withdrawal,both during Initial Info set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W30100	RC3 GS301 Light Jam during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5W30200	RC3 GS302 Light Jam during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5W30500	RC3 GS305 Light Jam during Initial Info Set	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5W31100	RC3 GS301 Dark Jam during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5W31200	RC3 GS302 Dark Jam during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5W31500	RC3 GS305 Dark Jam during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5W32100	Error occurred by notes remained in RC3 GS301 during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5W32200	Error occurred by notes remained in RC3 GS302 during Initial Info Set	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. 5W7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8HA01	GS801A Sensor Error during Initial Info Set	1. Check GS801A2. Operate to initialize BRM(Recovery)
5W8HA02	GS801B Sensor Error during Initial Info Set	1. Check GS801B2. Operate to initialize BRM(Recovery)
5W8HA03	GS801A, GS801B Sensor Error during Initial Info Set	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5W8HA04	GS802A Sensor Error during Initial Info Set	1. Check GS802A2. Operate to initialize BRM(Recovery)
5W8HA05	GS801A, GS802A Sensor Error during Initial Info Set	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5W8HA06	GS801B, GS802A Sensor Error during Initial Info Set	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5W8HA07	GS801A, GS801B, GS802A Sensor Error during Initial Info Set	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5W8HA08	GS802B Sensor Error during Initial Info Set	1. Check GS802B2. Operate to initialize BRM(Recovery)
5W8HA09	GS801A, GS802B Sensor Error during Initial Info Set	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5W8HA10	GS801B, GS802B Sensor Error during Initial Info Set	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5W8HA11	GS801A, GS801B, GS802B Sensor Error during Initial Info Set	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5W8HA12	GS802A, GS802B Sensor Error during Initial Info Set	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5W8HA13	GS801A, GS802A, GS802B Sensor Error during Initial Info Set	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5W8HA14	GS801B, GS802A, GS802B Sensor Error during Initial Info Set	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5W8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Initial Info Set	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5W8HB01	MR Sensor Level Error during Initial Info Set	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5W8HC02	UV_01 Sensor Level Error during Initial Info Set	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5W8HF03	CIS Shading data loading Fail during Initial Info Set	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5W8HF04	Detection DB Table loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5W8HF05	BC FPGA Data checksum Fail during Initial Info Set	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5W8HF06	BC FPGA Configuration Fail during Initial Info Set	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5W8HF07	BC FPGA Header Information Loading Fail during Initial Info Set	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5W8HF08	BC FPGA Initialize Fail during Initial Info Set	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5W8HF09	BC FPGA VERSION Fail during Initial Info Set	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5W8HF11	Detection DB #01 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF12	Detection DB #02 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF13	Detection DB #03 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF14	Detection DB #04 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF15	Detection DB #05 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF16	Detection DB #06 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF17	Detection DB #07 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF18	Detection DB #08 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF19	Detection DB #09 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HF20	Detection DB #10 loading Fail during Initial Info Set	1. Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5W8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Initial Info Set	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Initial Info Set	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG03	BC Transaction Ready Fail When Receive BC READY Command during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5W8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Initial Info Set	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Initial Info Set	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5W8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Initial Info Set	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG07	Receive BC Unknown Command during Initial Info Set	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5W8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Initial Info Set	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Initial Info Set	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Initial Info Set	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5W8HG11	No Nation Code When Receive BC READY Command during Initial Info Set	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Initial Info Set	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5W8HG20	Fail to Initialize CIS When Receive BC READY Command during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5W8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5W8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5W8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5W8HG24	ENCODER Mode Set Error When Receive BC READY Command during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5W8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Initial Info Set	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Initial Info Set	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5W8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Initial Info Set	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Initial Info Set	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Initial Info Set	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Initial Info Set	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Initial Info Set	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3) during Initial Info Set	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Initial Info Set	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Initial Info Set	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Initial Info Set	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Initial Info Set	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Initial Info Set	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Initial Info Set	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Initial Info Set	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Initial Info Set	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5W8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Initial Info Set	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG46	Bill Number Error When Receive Check No Write Command during Initial Info Set	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Initial Info Set	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Initial Info Set	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Initial Info Set	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HH01	Fail to Delete NAND FLASH during Initial Info Set	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5W8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Initial Info Set	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5W8HH03	Fail to Download Detection DB during Initial Info Set	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5W8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Initial Info Set	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5W8HH05	Detection DB Download File Check Error during Initial Info Set	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5W8HH06	Detection DB Download File Size Error during Initial Info Set	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5W8HH07	DB Table Save Error After Download Detection DB during Initial Info Set	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5W8HH08	Over Detection DB Download (Over 10) during Initial Info Set	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5W8HH09	Detection DB Header Information Error during Initial Info Set	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5W8HH10	EP Download Fail during Initial Info Set	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5W8HH11	EP Download Check Error during Initial Info Set	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5W8HH12	EP Download File Size Error during Initial Info Set	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5W8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Initial Info Set	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5W8HH14	BC FPGA Download Fail during Initial Info Set	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5W8HH15	Header Information Save Error After BC FPGA Download during Initial Info Set	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.

Problem Code	Problem Description	Troubleshooting
5W8HH16	Not Provide BC FPGA Download during Initial Info Set	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5W8HH17	EEPROM READ/WRITE Error during Initial Info Set	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5W8HH18	Receive Unit Serial Number Undefined Option during Initial Info Set	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5W8HH19	Receive USB Undefined Command during Initial Info Set	1. Check USB Command from BC and retry the operation2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5W8HH20	No BC Process Note When Receive Image Upload Command during Initial Info Set	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH21	FC1 Set Error When Receive Image Upload Command during Initial Info Set	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH22	BC is Processing Note When Receive Image Upload Command during Initial Info Set	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH23	FC2 Set Error When Receive Image Upload Command during Initial Info Set	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH24	Not Provide Total Image Upload Function during Initial Info Set	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5W8HH25	Not Provide Note Number Detection Image Upload Function during Initial Info Set	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH26	FC2 Set Error When Receive Image Information Upload Command during Initial Info Set	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Initial Info Set	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Initial Info Set	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Initial Info Set	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Initial Info Set	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Initial Info Set	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5W8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Initial Info Set	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Initial Info Set	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Initial Info Set	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5W8HI01	RecogTask Messeage Timeout Error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5W8HI02	ScanTask Messeage Timeout Error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5W8HI03	UartTask Messeage Timeout Error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5W8HI04	BcUsbTask Messeage Timeout Error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5W8HJ01	Algorithm Initialize Fail during Initial Info Set	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HJ02	Algorithm Ready Fail during Initial Info Set	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HJ03	Algorithm Information Set Error during Initial Info Set	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5W8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Initial Info Set	1. Retry the operation
5W8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Initial Info Set	1. Check the number of CST Setting notes info
5W8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Initial Info Set	1. Check Withdrawal notes setting
5W8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Initial Info Set	1. Check Withdrawal notes info
5W8HS01	FPGA Write Data Error When Initialize Scan Driver during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5W8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS05	Not Process Shading When Initialize Scan Driver during Initial Info Set	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5W8HS08	Fail to Set DAC When Initialize Scan Driver during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS11	FPGA Write Data Error When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS13	Fail to Set CIS Led On Value When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS14	Fail to Set Source of Scan Ligh When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS15	Not Process Shading When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS17	Fail to Set AFE Chip When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS18	Fail to Set DAC When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS19	MR/UV/DD Sampling Start Error When BC Ready during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS1A	Fail to Set 2-Notes DAC When BC Ready during Initial Info Set	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5W8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Initial Info Set	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5W8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS28	Fail to Set DAC When Stop BC during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Initial Info Set	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5W8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Initial Info Set	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5W8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Initial Info Set	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5W8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Initial Info Set	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5W8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Initial Info Set	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
5W8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Initial Info Set	1. Retry the operation2. Change BC
5W8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Initial Info Set	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5W8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Initial Info Set	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5W8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Initial Info Set	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5W8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Initial Info Set	1. Retry the operation2. Change BC
5W8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Initial Info Set	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5W8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Initial Info Set	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5W8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Initial Info Set	1. Retry the operation2. Change BC
5W8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8S100	BCU response MI error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8S200	BCU response BCC error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8S300	BCU response Sub MI error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8S400	BCU response Parameter error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5W8S900	BCU response Timeout Error during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAA100	UTC open Error before operation Initial Info Set	1. Open the upper unit. 2. Check the UTC removal and reinstallation

Problem Code	Problem Description	Troubleshooting
5WAA200	TSK open Error before operation Initial Info Set	1. Open the upper unit. 2. Check the TSK open and close
5WAA300	BMU Inter Lock Error before operation Initial Info Set	1. Check BMU open and close
5WAA400	BMU open Error before operation Initial Info Set	1. Check BMU open and close
5WAA500	Replenishment CST open Error before operation Initial Info Set	1. Check the Transit CST installation
5WAA600	CSM open Error before operation Initial Info Set	1. Open the upper unit. 2. Check CSM Open/Close
5WAA800	BMD Inter Lock Error before operation Initial Info Set	1. Open the lower unit. 2. Check the BMD open and close
5WAA900	BMD open Error before operation Initial Info Set	1. Open the lower unit. 2. Check the BMD open and close
5WAAA00	BC Open Error before operation Initial Info Set	1. Open the upper unit. 2. Check BC Open/Close
5WAAB00	RC Full Error before operation Initial Info Set	1. Open the lower unit. 2. Check RC Full and remove notes
5WAAC00	RJC Full Error before operation Initial Info Set	1. Open the upper unit. 2. Check RJC Full and remove notes
5WAAD00	UTC Full Error before operation Initial Info Set	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5WAAE00	RTC Full Error before operation Initial Info Set	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5WAAF00	RC Empty Error before operation Initial Info Set	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5WAAG00	Suspected note RC open Error before operation Initial Info Set	1. Open the lower unit. 2. Check the RC removal and reinstall
5WAE100	Received operation command without Initial Info Set during Initial Info Set	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5WAE200	Status on not operation reception command during Initial Info Set	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5WAE300	Received operation command without System Info Read during Initial Info Set	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5WAE400	Transaction was executed without Initializing after power on during Initial Info Set	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5WAEE00	RBU RS485 communication sequence disorder during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5WAEF00	RBU RS485 connection line disorder during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5WAEL00	RBU communication was not ready after power on during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization

Problem Code	Problem Description	Troubleshooting
5WAH600	Failure to check clearing NVRAM during Initial Info Set	1. Operate to initialize BRM(Recovery)
5WAHH00	Transaction count exists but GS802A sensor no change during Initial Info set	1. Check GS802A2. Operate to initialize BRM(Recovery)
5WAS100	RC1 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS200	RC2 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS300	RC3 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS400	RC4 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS500	RC5 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS600	Doubted notes stack set CST disorder when Initial Info Set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS700	RC7 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAS900	Option to process same serial number of Deposit count is set error-option and Option to process same serial number of Deposit End/Deposit Cancel is set reject-option during Initial Info Set.	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASA00	Set doubted/forged notes distinction data error when Initial Info set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASB00	No UTC to stack forged notes in case of forged note detection setting during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASC00	RC6 box denomination is different with SP set denomination during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASD00	UTC using setting when UTC is not installed during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASF00	Reject notes stack set CST disorder when Initial Info Set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASG00	BRM Not using RTC, Set RTC to Stack Cassette Error during Intial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5WASH00	UTC Use Setting error during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASM00	Adjustment Duplicate Note Option is Error during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASN00	Setting up country numbers 0 in the Initial Info Set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASP00	Deposit count Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASQ00	Deposit End Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASR00	Deposit Cancle Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASS00	Separation Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WAST00	Damaged notes stack set CST disorder when Initial Info Set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASU00	Collect TSK/ Lost Note Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASV00	Adjustment Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASW00	Replenishment Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASX00	Collect Duplicate Note Option is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASY00	Note Option of Number Process is Deposit during Initial Info set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WASZ00	No Note set in RC, Operation Mode is for Deposit, Withdrawal,both during Initial Info set during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5WBH100	RC1 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH200	RC2 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5WBH300	RC3 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH400	RC4 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH500	RC5 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH600	RC6 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH700	RC1 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH800	RC2 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBH900	RC3 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBHA00	RC4 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBHB00	RC5 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBHC00	RC6 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBHD00	RC1 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBHE00	RC2 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBHF00	RC3 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBHG00	RC4 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBHH00	RC5 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBHJ00	RC6 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBHK00	BMD Open Error During EEPROM Read/Write during Initial Info Set	1. Check the lower Unit load/removal
5WBHU00	BMD EEPROM Read Error during Initial Info Set	1. Replace RBU B/D
5WBHV00	BMD EEPROM Write Error during Initial Info Set	1. Replace RBU B/D

Problem Code	Problem Description	Troubleshooting
5WBHW00	BMD EEPROM Verify Error during Initial Info Set	1. Replace RBU B/D
5WBHX00	RC7 EEPROM Read Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBHY00	RC7 EEPROM Write Error during Initial Info Set	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5WBHZ00	RC7 EEPROM Verify Error during Initial Info Set	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5WBR000	RBU Response Timeout during Initial Info Set	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5X01H00	GS618 Dark Jam error during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X01J00	GS619 Dark Jam error during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X01M00	GSA01 Dark Jam error during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X01N00	GSA02 Dark Jam error during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X01P00	GSA03 Dark Jam error during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X01Q00	GSD01 Dark Jam error during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X01W00	GS802 Dark Jam error during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02100	Error occurred by notes remained in GS801 during Replenishment	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5X02200	Error occurred by notes remained in GS002 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02300	Error occurred by notes remained in GS003 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02400	Error occurred by notes remained in GS004 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02500	Error occurred by notes remained in GS005 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X02600	Error occurred by notes remained in GS006 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02700	Error occurred by notes remained in GS014 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02800	Error occurred by notes remained in GS018 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02900	Error occurred by notes remained in GS020 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02A00	Error occurred by notes remained in GS021 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02C00	Error occurred by notes remained in GS030 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02E00	Error occurred by notes remained in GS001 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02H00	Error occurred by notes remained in GS618 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02J00	Error occurred by notes remained in GS619 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02M00	Error occurred by notes remained in GSA01 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X02N00	Error occurred by notes remained in GSA02 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X02P00	Error occurred by notes remained in GSA03 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X07H00	Error occurred by the notes disorder in GS618 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X07J00	Error occurred by the notes disorder in GS619 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X07M00	Error occurred by the notes disorder in GSA01 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X07N00	Error occurred by the notes disorder in GSA02 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X07P00	Error occurred by the notes disorder in GSA03 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5X07Q00	Error occurred by the notes disorder in GSD01 during Replenishment	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X07W00	Error occurred by the notes disorder in GS802 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X0D100	Reject excess error (continue Reject error) during Replenishment	1. Check the Rejected denomination during Replenishment(Including denomination which did not set up in the cassette)
5X0D200	Reject excess error (notes excess error) during Replenishment	1. Check the Rejected denomination during Replenishment(Including denomination which did not set up in the cassette)
5X0D300	Reject excess error (Unappointed notes error) during Replenishment	1. Check the Rejected denomination during Replenishment(Including denomination which did not set up in the cassette)
5X0D400	Reject excess error (Cassette note error) during Replenishment	1. Check the Rejected denomination during Replenishment(Including denomination which did not set up in the cassette)
5X0D500	Reject excess error (2notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0D600	Reject excess error (Gap error(1note)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0D700	Reject excess error (Gap error(2notes)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0D800	Reject excess error (skew error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0D900	Reject excess error (shift error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0DA00	Reject excess error (Max length error(1note)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0DB00	Reject excess error (Max length error(2notes)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0DC00	Reject excess error (Max length error(3notes)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution

Problem Code	Problem Description	Troubleshooting
5X0DD00	Reject excess error (Max length error(4notes)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0DE00	Reject excess error (Min length error(1note)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0DF00	Reject excess error (Min length error(2notes)) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5X0DG00	Reject excess error (note error) during Replenishment	1. Check the Rejected denomination during Replenishment(Including denomination which did not set up in the cassette)
5X0DH00	Reject excess error (MR error) during Replenishment	1. Check the Rejected Notes during Replenishment(Failure to Notes recognition)
5X0DJ00	Reject excess error (IR error) during Replenishment	1. Check the Rejected Notes during Replenishment(Failure to Notes recognition)
5X0DK00	Reject excess error (Edge error) during Replenishment	1. Check the Rejected Notes during Replenishment(Failure to Notes recognition)
5X0DL00	Reject excess error (Image error) during Replenishment	1. Check the Rejected Notes during Replenishment(Failure to Notes recognition)
5X0DM00	Reject excess error (UV error) during Replenishment	1. Check the Rejected Notes during Replenishment(Failure to Notes recognition)
5X0DN00	Reject excess error (Sensor error) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DO00	Deposit count disallowed notes reject excess error during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DP00	Reject excess error (Communication error) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DQ00	Reject excess error (Full & etc) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DR00	Recognition Fail Error (Recognition test fail) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DS00	Recognition Fail Error (No Recognition info) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DT00	Recognition Fail Error (Only STX in Recognition info) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DU00	Recognition Fail Error (Recognition info BCC NG) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DV00	Recognition Fail Error (Recognition info MI NG) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DW00	Recognition Fail Error (Recognition info Index Fail) during Replenishment	1. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5X0DX00	Recognition Fail Error (Info BC Pass Info) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0DY00	Recognition Fail Error (Serial Number Data Format error) during Replenishment	1. Operate to initialize BRM(Recovery)
5X0F100	GM001 motor doesn't operate at a constant speed when the motor works during Replenishment	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5X0F200	GM002 motor doesn't operate at a constant speed when the motor works during Replenishment	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0F400	GM004 motor doesn't operate at a constant speed when the motor works during Replenishment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0F600	GM006 motor doesn't operate at a constant speed when the motor works during Replenishment	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0F700	GM007 motor doesn't operate at a constant speed when the motor works during Replenishment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0F900	GM009 motor doesn't operate at a constant speed when the motor works during Replenishment	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5X0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Replenishment	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5X0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Replenishment	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Replenishment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Replenishment	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5X0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Replenishment	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5X0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Replenishment	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize

Problem Code	Problem Description	Troubleshooting
5X0G100	Failure to 3Way Gate 0 degree mode conversion during Replenishment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5X0G200	Failure to 3Way Gate 120 degree mode conversion during Replenishment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5X0GB00	Time Out to 3Way Gate Mode conversion during Replenishment	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5X0GC00	Failure to RTRJ Gate RJC Mode conversion during Replenishment	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5X0GD00	Failure to RTRJ Gate RTC Mode conversion during Replenishment	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5X0J200	Box full detection or Setting error(Cassette for Replenishment and Reject is same) during Replenishment	1. Open the lower unit2. Open MID Transport(7)3. Check CST inside whether Full or not
5X0K100	Duplication S/N Error during Replenishment	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5X0N400	Jam Message Receive Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X0NA00	Checksum error when notes separate from TSK during Replenishment	1. Operate to initialize BRM(Recovery)
5X0NC00	length different from separation part to stack part after transport during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X0NK00	BC recognized notes have no cassette to be stacked during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X0Q100	UTC detachment Error during Replenishment	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5X0Q200	TSK detachment Error during Replenishment	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5X0Q300	BMU Inter Lock Error during Replenishment	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5X0Q400	BMU detackment Error during Replenishment	1. Check Load/Removal of the upper unit
5X0Q500	Replenishment CST detachment Error during Replenishment	1. Check the safe door open
5X0Q600	CSM detackment Error during Replenishment	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011

Problem Code	Problem Description	Troubleshooting
5X0Q800	BMD Inter Lock Error during Replenishment	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5X0Q900	BMD detachment Error during Replenishment	1. Check the lower Unit load/removal
5X0QA00	BC Open Error during Replenishment	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5X0QS00	Receive Error Stop CMD during Replenishment	1. Initialize
5X0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X0SZ00	Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X10100	RC1 GS101 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X10200	RC1 GS102 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X10500	RC1 GS105 Light Jam during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5X10Z00	RC1 All Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X11100	RC1 GS101 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X11200	RC1 GS102 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X11500	RC1 GS105 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X11Z00	All RC1 Sensor Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X12100	Error occurred by notes remained in RC1 GS101 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X12200	Error occurred by notes remained in RC1 GS102 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X12500	Error occurred by notes remained in RC1 GS105 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X12Z00	Error occurred by notes remained in All RC1 Sensor during Replenishment	1. Operate to initialize BRM.(Recovery)
5X13100	RC1 GS101 Sensor auto calibration error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X13200	RC1 GS102 Sensor auto calibration error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X13500	RC1 GS105 Sensor auto calibration error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X13Z00	All RC1 Sensor auto calibration error during Replenishment	1. Operate to initialize BRM.(Recovery)
5X14100	RC1 GS101 Extern lights check error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X14200	RC1 GS102 Extern lights check error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X14500	RC1 GS105 Extern lights check error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X14Z00	All RC1 Sensor Extern lights check error during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5X15100	RC1 GS101 Path error on transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X15200	RC1 GS102 Path error on transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X15500	RC1 GS105 Path error on transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X15Z00	All RC1 Sensor Path error on transport path during Replenishment	1. Operate to initialize BRM.(Recovery)
5X16100	RC1 GS101 Path error on sensor except for transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X16200	RC1 GS102 Path error on sensor except for transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X16500	RC1 GS105 Path error on sensor except for transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X16Z00	RC1 All Path error on sensor except for transport path during Replenishment	1. Operate to initialize BRM.(Recovery)
5X17100	Error occurred by the notes disorder in RC1 GS101 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X17200	Error occurred by the notes disorder in RC1 GS102 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X17500	Error occurred by the notes disorder in RC1 GS105 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X17Z00	Error occurred by the notes disorder in RC1 All during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5X1C400	RC1 Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5X1G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X1G200	RC1 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(A) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5X1G400	RC1 Failure to upword moving of PP during RC1 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(A) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5X1G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1G600	RC1 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5X1GA00	RC1 Solenoid Echo error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
5X1GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5X1GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X1GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5X1GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5X1GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1GK00	RC1 Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X1GQ00	RJC Press and Stack position fail during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5X1GR00	RJC Stack position fail during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5X1GS00	RC1 RJC Press position fail during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5X1GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.

Problem Code	Problem Description	Troubleshooting
5X1GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5X1GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Replenishment	1. Open the lower unit.2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5X1GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5X1GX00	RC1 GS101 detects notes during RJC intialize during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X1J100	RJC Full during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5X1J200	RC1 No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5X1J300	Full,Bottom no detect before move RC1 PP to stack position during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5X1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1RF00	RC1 Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1RP00	RC1 PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1S200	RC1 Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5X1S300	RC1 Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1SA00	RC1 Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X1SR00	RC1 Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X20100	RC2 GS201 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X20200	RC2 GS202 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X20500	RC2 GS205 Light Jam during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5X20Z00	RC2 All Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X21100	RC2 GS201 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X21200	RC2 GS202 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X21500	RC2 GS205 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X21Z00	RC2 All Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X22100	Error occurred by notes remained in RC2 GS201 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X22200	Error occurred by notes remained in RC2 GS202 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X22500	Error occurred by notes remained in RC2 GS205 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X22Z00	Error occurred by notes remained in RC2 All Sensor during Replenishment	1. Operate to initialize BRM.(Recovery)
5X23100	Sensor auto calibration error in RC2 GS201 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X23200	Sensor auto calibration error in RC2 GS202 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X23500	Sensor auto calibration error in RC2 GS205 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X23Z00	Sensor auto calibration error in RC2 All Sensor during Replenishment	1. Operate to initialize BRM.(Recovery)
5X24100	Extern lights check error in RC2 GS201 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X24200	Extern lights check error in RC2 GS202 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X24500	Extern lights check error in RC2 GS205 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X24Z00	Extern lights check error in RC2 All Sensor during Replenishment	1. Operate to initialize BRM.(Recovery)
5X25100	Path error on transport path in RC2 GS201 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X25200	Path error on transport path in RC2 GS202 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X25500	Path error on transport path in RC2 GS205 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X25Z00	Path error on transport path in RC2 All Sensor during Replenishment	1. Operate to initialize BRM.(Recovery)
5X26100	Path error on sensor except for transport path in RC2 GS201 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X26200	Path error on sensor except for transport path in RC2 GS202 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X26500	Path error on sensor except for transport path in RC2 GS205 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X26Z00	Path error on sensor except for transport path in RC2 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X27100	Error occurred by the notes disorder in RC2 GS201 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X27200	Error occurred by the notes disorder in RC2 GS202 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X27500	Error occurred by the notes disorder in RC2 GS205 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X27Z00	Error occurred by the notes disorder in RC2 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X2C400	RC2 Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5X2G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X2G200	RC2 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
5X2G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
5X2G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2G600	RC2 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5X2GA00	RC2 Solenoid Echo error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5X2GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X2GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5X2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5X2GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2GK00	RC2 Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X2J200	RC2 No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B)5. Fill up the Notes if there are no notes
5X2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5X2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5X34200	Extern lights check error in RC3 GS302 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X34500	Extern lights check error in RC3 GS305 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X34Z00	Extern lights check error in RC3 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X35100	Path error on transport path in RC3 GS301 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X35200	Path error on transport path in RC3 GS302 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X35500	Path error on transport path in RC3 GS305 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X35Z00	Path error on transport path in RC3 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X36100	Path error on sensor except for transport path in RC3 GS301 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X36200	Path error on sensor except for transport path in RC3 GS302 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X36500	Path error on sensor except for transport path in RC3 GS305 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X36Z00	Path error on sensor except for transport path in RC3 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X37100	Error occurred by the notes disorder in RC3 GS301 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X37200	Error occurred by the notes disorder in RC3 GS302 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X37500	Error occurred by the notes disorder in RC3 GS305 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X37Z00	Error occurred by the notes disorder in RC3 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X3C400	RC3 Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.

Problem Code	Problem Description	Troubleshooting
5X3G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X3G200	RC3 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
5X3G400	RC3 Failure to upward moving of PP during RC3 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
5X3G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3G600	RC3 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette
5X3GA00	RC3 RC Solenoid Echo error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
5X3GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X3GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5X3GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5X3GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X3J200	RC3 No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C).5. Fill up the Notes if there are no notes
5X3J300	RC3 Full,Bottom no detect before move RC PP to stack position during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
5X3L100	Remaining notes stack process error in RC3 GS301 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X3L200	Remaining notes stack process error in RC3 GS302 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X3L500	Remaining notes stack process error in RC3 GS305 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3RF00	RC3 Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3RP00	RC3 PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3S200	RC3 Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3S300	RC3 RC Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3SA00	RC3 RC Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X3SR00	RC3 Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X40100	RC4 GS401 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X40200	RC4 GS402 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X40500	RC4 GS405 Light Jam during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5X40Z00	RC4 All Sensor Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X41100	RC4 GS401 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X41200	RC4 GS402 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X41500	RC4 GS405 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X41Z00	RC4 All Sensor Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X42100	Error occurred by notes remained in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X42200	Error occurred by notes remained in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X42500	Error occurred by notes remained in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X42Z00	Error occurred by notes remained in RC4 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X43100	Sensor auto calibration error in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X43200	Sensor auto calibration error in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X43500	Sensor auto calibration error in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X43Z00	Sensor auto calibration error in RC4 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X44100	Extern lights check error in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X44200	Extern lights check error in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X44500	Extern lights check error in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X44Z00	Extern lights check error in RC4 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X45100	Path error on transport path in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X45200	Path error on transport path in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X45500	Path error on transport path in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X45Z00	Path error on transport path in RC4 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X46100	Path error on sensor except for transport path in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X46200	Path error on sensor except for transport path in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X46500	Path error on sensor except for transport path in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X46Z00	Path error on sensor except for transport path in RC4 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X47100	Error occurred by the notes disorder in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5X47200	Error occurred by the notes disorder in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X47500	Error occurred by the notes disorder in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X47Z00	Error occurred by the notes disorder in RC4 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X4C400	RC4 Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5X4G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X4G200	RC4 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(D). 4. Open the recycle cassette door(D).5. Check cassette status to move stage up and down.
5X4G400	RC4 Failure to upward moving of PP during RC4 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(D). 4. Open the recycle cassette door(D).5. Check cassette status to move stage up and down.
5X4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4G600	RC4 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5X4GA00	RC4 RC Solenoid Echo error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs

Problem Code	Problem Description	Troubleshooting
5X4GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X4GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5X4GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5X4GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X4J200	RC4 No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes

Problem Code	Problem Description	Troubleshooting
5X4J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
5X4L100	Remaining notes stack process error in RC4 GS401 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X4L200	Remaining notes stack process error in RC4 GS402 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X4L500	Remaining notes stack process error in RC4 GS405 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4RF00	RC4 Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4RP00	RC4 PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4S200	RC4 Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4S300	RC4 RC Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4SA00	RC4 RC Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X4SR00	RC4 Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5X50100	RC5 GS501 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X50200	RC5 GS502 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X50500	RC5 GS505 Light Jam during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5X50Z00	RC5 All Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X51100	RC5 GS501 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X51200	RC5 GS502 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X51500	RC5 GS505 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X51Z00	RC5 All Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5X52100	Error occurred by notes remained in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X52200	Error occurred by notes remained in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X52500	Error occurred by notes remained in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X52Z00	Error occurred by notes remained in RC5 All during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5X53100	Sensor auto calibration error in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X53200	Sensor auto calibration error in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X53500	Sensor auto calibration error in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X53Z00	Sensor auto calibration error in RC5 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X54100	Extern lights check error in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X54200	Extern lights check error in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X54500	Extern lights check error in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X54Z00	Extern lights check error in RC5 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X55100	Path error on transport path in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X55200	Path error on transport path in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X55500	Path error on transport path in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X55Z00	Path error on transport path in RC5 All during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5X56100	Path error on sensor except for transport path in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X56200	Path error on sensor except for transport path in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X56500	Path error on sensor except for transport path in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X56Z00	Path error on sensor except for transport path in RC5 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X57100	Error occurred by the notes disorder in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X57200	Error occurred by the notes disorder in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X57500	Error occurred by the notes disorder in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X57Z00	Error occurred by the notes disorder in RC5 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5X5C400	RC5 Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5X5G100	RC5 Failure of returning notes (GS501,GS502 Sensors detect no notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X5G200	RC5 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.
5X5G400	RC5 Failure to upward moving of PP during RC5 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(E). 4. Open the recycle cassette door(E).5. Check cassette status to move stage up and down.

Problem Code	Problem Description	Troubleshooting
5X5G500	RC5 Failure to stack roller retreat (GS513 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5G600	RC5 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5G700	RC5 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS507) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5G800	RC5 Failure to move PP to press position (GS508 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check the upper side of the recycle cassette
5X5GA00	RC5 Solenoid Echo error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (E) after removing recycle cassette4. Replace the cassette when same error occurs
5X5GB00	RC5 Feed Roller homeposition Sensor(GS507) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5GC00	RC5 Feed Roller homeposition Sensor(GS507) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5GD00	RC5 GS501,GS502 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X5GE00	RC5 GS508 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5X5GF00	RC5 Notes Setting error during initialize (GS514, Bottom Sensor(GS512) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note.
5X5GG00	RC5 Stack Roller Sensor(GS513) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5GH00	RC5 Stack Roller Sensor(GS513) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5X5GJ00	RC5 Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5GK00	RC5 Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5GL00	RC5 Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5X5J200	RC5 No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E).5. Fill up the Notes if there are no notes
5X5J300	RC5 Full,Bottom no detect before move RC PP to stack position during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
5X5L100	Remaining notes stack process error in RC5 GS501 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X5L200	Remaining notes stack process error in RC5 GS502 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X5L500	Remaining notes stack process error in RC5 GS505 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5X5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5X5RF00	RC5 Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5RP00	RC5 PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5S200	RC5 Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5S300	RC5 Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5SA00	RC5 Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X5SR00	RC5 Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X61H00	GS618/619 Dark Jam error during Replenishment.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5X62100	CSM Residue Error during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5X62300	CSM insert notes excess Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5X62500	CSM notes disappear Error during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5X62600	CSM notes appear Error during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5X62Z00	CSM Residue Error during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5X6G100	Fail to move CSM BP to Stack Position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5X6G200	Fail to move CSM BP to Deposit Position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly

Problem Code	Problem Description	Troubleshooting
5X6G300	Fail to move CSM BP to Separation Position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5X6G500	Fail to move CSM BP to Note-Out Position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5X6G600	Fail to move CSM P-Roller to Home position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5X6G800	Fail to CSM return notes during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5X6G900	CSM GM601 Step out during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5X6GA00	Fail to move CSM BP to return note Position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5X6GB00	Fail to move CSM FP to Deposit Position during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5X6GF00	Fail to move CSM G-Roller to Homeposition during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5X6GG00	Fail to move both CSM P/G-Roller to Homeposition during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5X6M200	CSM Inner Shutter Open Error during Replenishment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5X6M300	CSM Inner Shutter Close Error during Replenishment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5X6M400	CSM Outer Shutter Open Error during Replenishment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5X6M500	CSM Outer Shutter Close Error during Replenishment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light

Problem Code	Problem Description	Troubleshooting
5X6M600	CSM Outer Shutter is Opened during Replenishment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5X6M700	CSM Inner Shutter Open during Stack during Replenishment	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5X6M800	CSM Stopper Home position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5X6M900	CSM Stopper Stack position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5X6MB00	CSM Bill Supporter Up position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5X6MC00	CSM Bill Supporter Down position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5X6P100	CSM PP Withdrawal(Stack) position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6P200	CSM PP Deposit position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6P300	CSM PP Separation position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6P400	CSM PP collect lost notes position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5X6P500	CSM PP Note-out position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6P600	CSM PP Note-arrange position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6P800	CSM PP Control Stack Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6P900	CSM PP Return note position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6PD00	CSM PP Check semi-note Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Replenishment	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5X6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X6RB00	CSM BP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

5X7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8HA01	GS801A Sensor Error during Replenishment	1. Check GS801A2. Operate to initialize BRM(Recovery)
5X8HA02	GS801B Sensor Error during Replenishment	1. Check GS801B2. Operate to initialize BRM(Recovery)
5X8HA03	GS801A, GS801B Sensor Error during Replenishment	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5X8HA04	GS802A Sensor Error during Replenishment	1. Check GS802A2. Operate to initialize BRM(Recovery)
5X8HA05	GS801A, GS802A Sensor Error during Replenishment	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5X8HA06	GS801B, GS802A Sensor Error during Replenishment	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5X8HA07	GS801A, GS801B, GS802A Sensor Error during Replenishment	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5X8HA08	GS802B Sensor Error during Replenishment	1. Check GS802B2. Operate to initialize BRM(Recovery)
5X8HA09	GS801A, GS802B Sensor Error during Replenishment	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)
5X8HA10	GS801B, GS802B Sensor Error during Replenishment	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5X8HA11	GS801A, GS801B, GS802B Sensor Error during Replenishment	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5X8HA12	GS802A, GS802B Sensor Error during Replenishment	1. Check GS802A, GS802B. Operate to initialize BRM(Recovery)
5X8HA13	GS801A, GS802A, GS802B Sensor Error during Replenishment	1. Check GS801A, GS802A, GS802B. Operate to initialize BRM(Recovery)
5X8HA14	GS801B, GS802A, GS802B Sensor Error during Replenishment	1. Check GS801B, GS802A, GS802B. Operate to initialize BRM(Recovery)
5X8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Replenishment	1. Check GS801A, GS801B, GS802A, GS802B. Operate to initialize BRM(Recovery)
5X8HB01	MR Sensor Level Error during Replenishment	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5X8HC02	UV_01 Sensor Level Error during Replenishment	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5X8HF03	CIS Shading data loading Fail during Replenishment	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5X8HF04	Detection DB Table loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF05	BC FPGA Data checksum Fail during Replenishment	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5X8HF06	BC FPGA Configuration Fail during Replenishment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5X8HF07	BC FPGA Header Information Loading Fail during Replenishment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5X8HF08	BC FPGA Initialize Fail during Replenishment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5X8HF09	BC FPGA VERSION Fail during Replenishment	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5X8HF11	Detection DB #01 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF12	Detection DB #02 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF13	Detection DB #03 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF14	Detection DB #04 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF15	Detection DB #05 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF16	Detection DB #06 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF17	Detection DB #07 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF18	Detection DB #08 loading Fail during Replenishment	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5X8HF19	Detection DB #09 loading Fail during Replenishment	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HF20	Detection DB #10 loading Fail during Replenishment	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5X8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Replenishment	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Replenishment	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG03	BC Transaction Ready Fail When Receive BC READY Command during Replenishment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5X8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Replenishment	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Replenishment	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Replenishment	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG07	Receive BC Unknown Command during Replenishment	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5X8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Replenishment	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Replenishment	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Replenishment	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5X8HG11	No Nation Code When Receive BC READY Command during Replenishment	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Replenishment	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio
5X8HG20	Fail to Initialize CIS When Receive BC READY Command during Replenishment	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.

Problem Code	Problem Description	Troubleshooting
5X8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Replenishment	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5X8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Replenishment	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5X8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Replenishment	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5X8HG24	ENCODER Mode Set Error When Receive BC READY Command during Replenishment	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5X8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Replenishment	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Replenishment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Replenishment	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Replenishment	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Replenishment	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Replenishment	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Replenishment	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Replenishment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Replenishment	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Replenishment	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5X8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Replenishment	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Replenishment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Replenishment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Replenishment	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Replenishment	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Replenishment	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Replenishment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG46	Bill Number Error When Receive Check No Write Command during Replenishment	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Replenishment	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Replenishment	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Replenishment	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HH01	Fail to Delete NAND FLASH during Replenishment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5X8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Replenishment	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5X8HH03	Fail to Download Detection DB during Replenishment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5X8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Replenishment	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5X8HH05	Detection DB Download File Check Error during Replenishment	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5X8HH06	Detection DB Download File Size Error during Replenishment	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5X8HH07	DB Table Save Error After Download Detection DB during Replenishment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5X8HH08	Over Detection DB Download (Over 10) during Replenishment	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5X8HH09	Detection DB Header Information Error during Replenishment	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5X8HH10	EP Download Fail during Replenishment	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5X8HH11	EP Download Check Error during Replenishment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5X8HH12	EP Download File Size Error during Replenishment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5X8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Replenishment	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5X8HH14	BC FPGA Download Fail during Replenishment	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5X8HH15	Header Information Save Error After BC FPGA Download during Replenishment	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5X8HH16	Not Provide BC FPGA Download during Replenishment	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5X8HH17	EEPROM READ/WRITE Error during Replenishment	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5X8HH18	Receive Unit Serial Number Undefined Option during Replenishment	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5X8HH19	Receive USB Undefined Command during Replenishment	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5X8HH20	No BC Process Note When Receive Image Upload Command during Replenishment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH21	FC1 Set Error When Receive Image Upload Command during Replenishment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH22	BC is Processing Note When Receive Image Upload Command during Replenishment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH23	FC2 Set Error When Receive Image Upload Command during Replenishment	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH24	Not Provide Total Image Upload Function during Replenishment	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.

Problem Code	Problem Description	Troubleshooting
5X8HH25	Not Provide Note Number Detection Image Upload Function during Replenishment	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH26	FC2 Set Error When Receive Image Information Upload Command during Replenishment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Replenishment	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Replenishment	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Replenishment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Replenishment	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Replenishment	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Replenishment	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Replenishment	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Replenishment	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5X8HI01	RecogTask Messeage Timeout Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5X8HI02	ScanTask Messeage Timeout Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5X8HI03	UartTask Messeage Timeout Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5X8HI04	BcUsbTask Messeage Timeout Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5X8HJ01	Algorithm Initialize Fail during Replenishment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5X8HJ02	Algorithm Ready Fail during Replenishment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HJ03	Algorithm Information Set Error during Replenishment	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5X8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Replenishment	1. Retry the operation
5X8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Replenishment	1. Check the number of CST Setting notes info
5X8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Replenishment	1. Check Withdrawal notes setting
5X8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Replenishment	1. Check Withdrawal notes info
5X8HS01	FPGA Write Data Error When Initialize Scan Driver during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS05	Not Process Shading When Initialize Scan Driver during Replenishment	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5X8HS08	Fail to Set DAC When Initialize Scan Driver during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS11	FPGA Write Data Error When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS13	Fail to Set CIS Led On Value When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS14	Fail to Set Source of Scan Ligh When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS15	Not Process Shading When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS17	Fail to Set AFE Chip When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS18	Fail to Set DAC When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5X8HS19	MR/UV/DD Sampling Start Error When BC Ready during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS1A	Fail to Set 2-Notes DAC When BC Ready during Replenishment	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5X8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Replenishment	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5X8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS28	Fail to Set DAC When Stop BC during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Replenishment	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5X8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Replenishment	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5X8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Replenishment	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5X8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Replenishment	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5X8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Replenishment	1. Retry the operation2. Change BC
5X8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Replenishment	1. Retry the operation2. Change BC
5X8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Replenishment	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5X8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Replenishment	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5X8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Replenishment	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5X8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Replenishment	1. Retry the operation2. Change BC
5X8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Replenishment	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5X8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Replenishment	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the opertion4. Change BC
5X8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Replenishment	1. Retry the operation2. Change BC
5X8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5X8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8S100	BCU response MI error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8S200	BCU response BCC error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8S300	BCU response Sub MI error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8S400	BCU response Parameter error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5X8S900	BCU response Timeout Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XA2100	Error occurred by notes remained in GS801 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2200	Error occurred by notes remained in GS002 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2300	Error occurred by notes remained in GS003 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2400	Error occurred by notes remained in GS004 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2500	Error occurred by notes remained in GS005 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XA2600	Error occurred by notes remained in GS006 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2700	Error occurred by notes remained in GS014 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2800	Error occurred by notes remained in GS018 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2900	Error occurred by notes remained in GS020 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2A00	Error occurred by notes remained in GS021 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2E00	Error occurred by notes remained in GS001 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2H00	Error occurred by notes remained in GS618 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2J00	Error occurred by notes remained in GS619 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2K00	Error occurred by notes remained in GS701,702 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XA2M00	Error occurred by notes remained in GSA01 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2N00	Error occurred by notes remained in GSA02 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2P00	Error occurred by notes remained in GSA03 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2Q00	Error occurred by notes remained in GSD01 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XA2W00	Error occurred by notes remained in GS802 during Replenishment	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5XAA100	UTC open Error before operation Replenishment	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5XAA200	TSK open Error before operation Replenishment	1. Open the upper unit. 2. Check the TSK open and close
5XAA300	BMU Inter Lock Error before operation Replenishment	1. Check BMU open and close
5XAA400	BMU open Error before operation Replenishment	1. Check BMU open and close
5XAA500	Replenishment CST open Error before operation Replenishment	1. Check the Transit CST installation
5XAA600	CSM open Error before operation Replenishment	1. Open the upper unit. 2. Check CSM Open/Close
5XAA800	BMD Inter Lock Error before operation Replenishment	1. Open the lower unit. 2. Check the BMD open and close
5XAA900	BMD open Error before operation Replenishment	1. Open the lower unit. 2. Check the BMD open and close
5XAAA00	BC Open Error before operation Replenishment	1. Open the upper unit. 2. Check BC Open/Close
5XAAB00	RC Full Error before operation Replenishment	1. Open the lower unit. 2. Check RC Full and remove notes
5XAAC00	RJC Full Error before operation Replenishment	1. Open the upper unit. 2. Check RJC Full and remove notes
5XAAD00	UTC Full Error before operation Replenishment	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC

Problem Code	Problem Description	Troubleshooting
5XAAE00	RTC Full Error before operation Replenishment	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5XAAF00	RC Empty Error before operation Replenishment	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5XAAG00	Suspected note RC open Error before operation Replenishment	1. Open the lower unit. 2. Check the RC removal and reinstall
5XAAJ00	Replenishment is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5XAE100	Received operation command without Initial Info Set during Replenishment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5XAE200	Status on not operation reception command during Replenishment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5XAE300	Received operation command without System Info Read during Replenishment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5XAE400	Transaction was executed without Initializing after power on during Replenishment	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5XAE500	Received operation command on a device that does not support the Transit CST or the rear transit CST during Replenishment.	1. Restart over AP-SP2. Do transation operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5XAEE00	RBU RS485 communication sequence disorder during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5XAEF00	RBU RS485 connection line disorder during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5XAEL00	RBU communication was not ready after power on during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5XAH600	Failure to check clearing NVRAM during Replenishment	1. Operate to initialize BRM(Recovery)
5XAHF00	Transaction count exists but GS801A sensor no change during Replenishment	1. Check GS801A2. Operate to initialize BRM(Recovery)
5XAHG00	Transaction count exists but GS801B sensor no change during Replenishment	1. Check GS801B2. Operate to initialize BRM(Recovery)
5XAHH00	Transaction count exists but GS802A sensor no change during Replenishment	1. Check GS802A2. Operate to initialize BRM(Recovery)
5XAHJ00	Transaction count exists but GS802B sensor no change during Replenishment	1. Check GS802B2. Operate to initialize BRM(Recovery)
5XAJ100	Semi error of RC all full detection during replenishment	1. Open the lower unit. 2. Check RC Full and remove notes
5XAJ800	Semi error of CST empty detection during operation ready in replenishment	1. Initialize
5XAJ900	Semi error of CST empty detection during replenishment	1. Initialize

Problem Code	Problem Description	Troubleshooting
5XAJA00	Semi error of CST separation during replenishment	1. Initialize
5XAJB00	Semi error of received stop command during replenishment/collect cash	1. Initialize
5XAJC00	Semi error of no available RJC during replenishment/collect cash	1. Initialize
5XAJD00	Semi error of no available CST during replenishment/collect cash	1. Initialize
5XAJF00	Semi error of RC all full detection during operation ready in replenishment	1. Open the lower unit. 2. Check RC Full and remove notes
5XAN100	RC1 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XAN200	RC2 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XAN300	RC3 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XAN400	RC4 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XAN500	RC5 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XANE00	RC6 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XANF00	RC7 stack counts is different with BC pass info of normal count in the Replenishment	1. Operate to initialize BRM(Recovery)
5XAR100	Message timeout error during operation ready during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XAR200	Message timeout error during transaction operation during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XAR300	Message timeout error during error postprocessing during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XAR800	RBU/BC sensor auto dimming response message timeout error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XARC00	BC response message timeout error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XARJ00	Message timeout error during Stop Ready during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XAS700	Comparative error when Replenishment denomination/note count set during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5XAS800	RC is not in use during Replenishment (Not for Deposit or Error occurred) during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XASB00	Stop command Receive Semi-normal during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XASD00	Set Count in DPC or RJC during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XASE00	USB Timeout occurs due to excessive RC Separation error Retry during Replenishment.	1. Operate to initialize(recover) BRM.2. Reboot the system when the same error occurs after initialization.
5XASK00	Reject CST Set Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XASQ00	Both RC and CST have Requested count during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XASR00	Max withdrawal count excess request error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XASY00	Requested count is 0 during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XBH100	RC1 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH200	RC2 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH300	RC3 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH400	RC4 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH500	RC5 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH600	RC6 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH700	RC1 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBH800	RC2 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5XBH900	RC3 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBHA00	RC4 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBHB00	RC5 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBHC00	RC6 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBHD00	RC1 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBHE00	RC2 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBHF00	RC3 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBHG00	RC4 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBHH00	RC5 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBHJ00	RC6 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBHK00	BMD Open Error During EEPROM Read/Write during Replenishment	1. Check the lower Unit load/removal
5XBHU00	BMD EEPROM Read Error during Replenishment	1. Replace RBU B/D
5XBHV00	BMD EEPROM Write Error during Replenishment	1. Replace RBU B/D
5XBHW00	BMD EEPROM Verify Error during Replenishment	1. Replace RBU B/D
5XBHX00	RC7 EEPROM Read Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBHY00	RC7 EEPROM Write Error during Replenishment	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5XBHZ00	RC7 EEPROM Verify Error during Replenishment	1. Reload the RC after removing RC2. Replace the RC if same error occurs during initialization
5XBR000	RBU Response Timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XBR700	RBU Response Message Timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5XBS100	RBU RS-232 Seq Num Echo Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XBS200	RBU RS-232 MI Echo Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XBSS00	RBU Auto Calibration Command Parameter Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XC0100	RC6 GSC01 Light Jam during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC0200	RC6 GSC02 Light Jam during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC0500	RC6 GSC05 Light Jam during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(8)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5XC0Z00	RC6 All Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC1100	RC6 GSC01 Dark Jam during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC1200	RC6 GSC02 Dark Jam during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC1500	RC6 GSC05 Dark Jam during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC1Z00	RC6 All Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC2100	Error occurred by notes remained in RC6 GSC01 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC2200	Error occurred by notes remained in RC6 GSC02 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XC2500	Error occurred by notes remained in RC6 GSC05 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC2Z00	Error occurred by notes remained in RC6 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC3100	Sensor auto calibration error in RC6 GSC01 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC3200	Sensor auto calibration error in RC6 GSC02 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC3500	Sensor auto calibration error in RC6 GSC05 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC3Z00	Sensor auto calibration error in RC6 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC4100	Extern lights check error in RC6 GSC01 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC4200	Extern lights check error in RC6 GSC02 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC4500	Extern lights check error in RC6 GSC05 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC4Z00	Extern lights check error in RC6 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC5100	Path error on transport path in RC6 GSC01 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC5200	Path error on transport path in RC6 GSC02 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XC5500	Path error on transport path in RC6 GSC05 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC5Z00	Path error on transport path in RC6 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC6100	Path error on sensor except for transport path in RC6 GSC01 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC6200	Path error on sensor except for transport path in RC6 GSC02 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC6500	Path error on sensor except for transport path in RC6 GSC05 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC6Z00	Path error on sensor except for transport path in RC6 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XC7100	Error occurred by the notes disorder in RC6 GSC01 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC7200	Error occurred by the notes disorder in RC6 GSC02 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC7500	Error occurred by the notes disorder in RC6 GSC05 during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XC7Z00	Error occurred by the notes disorder in RC6 All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XCC400	RJC Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5XCG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XCG200	RC6 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5XCG400	RC6 Failure to upward moving of PP during RC6 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5XCG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCG600	RC6 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
5XCGA00	RC6 RC Solenoid Echo error during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
5XCGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XCGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5XCGF00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5XCGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XCGQ00	RJC Press and Stack position fail during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5XCGR00	RJC Stack position fail during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5XCGS00	RC6 RJC Press position fail during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5XCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5XCGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5XCGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5XCGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Replenishment	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.

Problem Code	Problem Description	Troubleshooting
5XCGX00	RC6 GSC01 detects notes during RJC initialize during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XCJ100	RC6 RJC Full during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5XCJ200	RC6 RC No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
5XCJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5XCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCRF00	RC6 Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCRP00	RC6 PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCS200	RC6 Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCS300	RC6 Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCSA00	RC6 Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XCSR00	RC6 Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XE0100	CST GS901 Light Jam during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XE0200	CST GS902 Light Jam during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE0500	CST GS905 Light Jam during Replenishment	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
5XE0Z00	CST All Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5XE1100	CST GS901 Dark Jam during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE1200	CST GS902 Dark Jam during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE1500	CST GS905 Dark Jam during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE1Z00	CST All Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5XE2100	Error occurred by notes remained in CST GS901 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE2200	Error occurred by notes remained in CST GS902 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE2500	Error occurred by notes remained in CST GS905 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE2Z00	Error occurred by notes remained in CST All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XE3100	Sensor auto calibration error in CST GS901 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE3200	Sensor auto calibration error in CST GS902 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE3500	Sensor auto calibration error in CST GS905 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE3Z00	Sensor auto calibration error in CST All during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5XE4100	Extern lights check error in CST GS901 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE4200	Extern lights check error in CST GS902 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE4500	Extern lights check error in CST GS905 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE4Z00	Extern lights check error in CST All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XE5100	Path error on transport path in CST GS901 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE5200	Path error on transport path in CST GS902 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE5500	Path error on transport path in CST GS905 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE5Z00	Path error on transport path in CST All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XE6100	Path error on sensor except for transport path in CST GS901 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE6200	Path error on sensor except for transport path in CST GS902 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE6500	Path error on sensor except for transport path in CST GS905 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE6Z00	Path error on sensor except for transport path in CST All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XE7100	Error occurred by the notes disorder in CST GS901 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE7200	Error occurred by the notes disorder in CST GS902 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XE7500	Error occurred by the notes disorder in CST GS905 during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XE7Z00	Error occurred by the notes disorder in CST All during Replenishment	1. Operate to initialize BRM.(Recovery)
5XEC100	CST Miss-Pickup during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
5XEC200	Exceeded number of retries for CST separation error during Replenishment.	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check the upper and the notes.
5XEC400	CST Last Note No Front detect during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5XEG100	CST Failure of returning notes (GS901,GS902 Sensors detect no notes) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XEG200	CST Failure to move PP to stack position during Replenishment	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5XEG400	CST Failure to upword moving of PP during RC stack roller retreat movement during Replenishment	1. Remove the transit cassette.2. Open the cassette door.3. Check the stage status.
5XEG500	CST Failure to stack roller retreat (GS913 Sensor no change) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEG600	CST Stack Roller retreat position disorder during RC Separation during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEG700	CST RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS907) no change) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEG800	CST Failure to move PP to press position (GS908 Sensor Dark Fail) during Replenishment	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5XEGA00	CST RC Solenoid Echo error during Replenishment	1. Reload the transit cassette after removing the cassette.2. Change the cassette when same error occur.
5XEGB00	CST Feed Roller homeposition Sensor(GS907) Light detect fail during RC Stack during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEGC00	CST Feed Roller homeposition Sensor(GS907) Dark detect fail during RC Stack during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5XEGD00	CST GS901,GS902 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5XEGE00	CST GS908 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5XEGF00	CST Notes Setting error during initialize (GS914, Bottom Sensor(GS912) both dark) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note.
5XEGG00	CST Stack Roller Sensor(GS913) detect light during RC FM Stack during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEGH00	CST Stack Roller Sensor(GS913) detect dark during RC FM Stack during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEGJ00	CST RC Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEGK00	CST RC Stack Roller retreat fail (Motor speed error) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5X EGL00	CST RC Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove jammed notes or substance using any wheels on the upper side.4. Check the Pickup-Roller rotates softly
5XEJ200	CST No Residue during Replenishment	1. Remove the transit cassette.2. Check the notes remain after open the cassette door.3. Fill up the Notes if there are no notes
5XEJ300	CST Full,Bottom no detect before move RC PP to stack position during Replenishment	1. Remove the transit cassette.2. Check the stage status after open the cassette.3. Check the upper side of the cassette
5XEK100	CST separation request notes is 0 during Replenishment	1. Operate to initialize BRM.(Recovery)
5XENL00	CST Requested notes is more than Residue notes,separation stop during Replenishment	1. Check CST actual count and SPL screen count.2. Setting CST count match actual count.3. Operate to initialize BRM(Recovery)
5XER100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XER200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XER300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5XER600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XERF00	CST Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XERP00	CST PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XES200	CST Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XES300	CST RC Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XESA00	CST RC Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XESR00	CST Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XF0100	RC7 GSF01 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF0200	RC7 GSF02 Light Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF0500	RC7 GSF05 Light Jam during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(F)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5XF0Z00	RC7 All Light Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5XF1100	RC7 GSF01 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF1200	RC7 GSF02 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF1500	RC7 GSF05 Dark Jam during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5XF1Z00	All RC7 Sensor Dark Jam during Replenishment	1. Operate to initialize BRM.(Recovery)
5XF2100	Error occurred by notes remained in RC7 GSF01 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF2200	Error occurred by notes remained in RC7 GSF02 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF2500	Error occurred by notes remained in RC7 GSF05 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF2Z00	Error occurred by notes remained in All RC7 Sensor during Replenishment	1. Operate to initialize BRM.(Recovery)
5XF3100	RC7 GSF01 Sensor auto calibration error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF3200	RC7 GSF02 Sensor auto calibration error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF3500	RC7 GSF05 Sensor auto calibration error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF3Z00	All RC7 Sensor auto calibration error during Replenishment	1. Operate to initialize BRM.(Recovery)
5XF4100	RC7 GSF01 Extern lights check error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF4200	RC7 GSF02 Extern lights check error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF4500	RC7 GSF05 Extern lights check error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF4Z00	All RC7 Sensor Extern lights check error during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5XF5100	RC7 GSF01 Path error on transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF5200	RC7 GSF02 Path error on transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF5500	RC7 GSF05 Path error on transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF5Z00	All RC7 Sensor Path error on transport path during Replenishment	1. Operate to initialize BRM.(Recovery)
5XF6100	RC7 GSF01 Path error on sensor except for transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF6200	RC7 GSF02 Path error on sensor except for transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF6500	RC7 GSF05 Path error on sensor except for transport path during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF6Z00	RC7 All Path error on sensor except for transport path during Replenishment	1. Operate to initialize BRM.(Recovery)
5XF7100	Error occurred by the notes disorder in RC7 GSF01 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF7200	Error occurred by the notes disorder in RC7 GSF02 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF7500	Error occurred by the notes disorder in RC7 GSF05 during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XF7Z00	Error occurred by the notes disorder in RC7 All during Replenishment	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5XFG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XFG200	RC7 Failure to move PP to stack position during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(F) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5XFG400	RC7 Failure to upward moving of PP during RC7 stack roller retreat movement during Replenishment	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(F) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5XFG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFG600	RC7 Stack Roller retreat position disorder during RC Separation during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
5XFGA00	RC7 Solenoid Echo error during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
5XFGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5XFGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5XFGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5XFGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFGK00	RC7 Stack Roller retreat fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Replenishment	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5XFJ200	RC7 No Residue during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5XFJ300	Full,Bottom no detect before move RC7 PP to stack position during Replenishment	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
5XFRF00	RC7 Feed Motor response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XFRP00	RC7 PP response timeout during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XFS200	RC7 Receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XFS300	RC7 Task not for separation receive separation command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5XFSA00	RC7 Sub Task receive undefined command during Replenishment	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5XFSR00	RC7 Sub Task for Wait Setting Error during Replenishment	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization
5XUS100	USB Bulk Sequence Error during Replenishment.	1. Restart over AP-SP
5XUS300	USB Bulk Received Length Error during Replenishment.	1. Reboot the system
5XUS400	Message transmission Error from USB to Main Task during Replenishment.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5XUS500	Message reception Error from MainTask to USB during Replenishment.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5XUSCMD	Bulk command data check error during Replenishment. (USB communication failure)	1. Restart over AP-SP
5XUSCRC	CRC data check error during Replenishment. (USB communication failure)	1. Restart over AP-SP
5XUSLEN	Bulk length error during Replenishment. (USB communication failure)	1. Restart over AP-SP
5Y00100	GS801 Light Jam error during Collect cash	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00200	GS002 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00300	GS003 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00400	GS004 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00500	GS005 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00600	GS006 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y00700	GS014 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00800	GS018 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00900	GS020 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00A00	GS021 Light Jam error during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00C00	GS030 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00E00	GS001 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00H00	GS618 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00J00	GS619 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00M00	GSA01 Light Jam error during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00N00	GSA02 Light Jam error during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y00P00	GSA03 Light Jam error during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00Q00	GSD01 Light Jam error during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y00W00	GS802 Light Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y01100	GS801 Dark Jam error during Collect cash	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance
5Y01200	GS002 Dark Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y01300	GS003 Dark Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y01400	GS004 Dark Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y01500	GS005 Dark Jam error during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06E00	GS001 Path error on sensor except for transport path during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06H00	GS618 Path error on sensor except for transport path during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06J00	GS619 Path error on sensor except for transport path during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06M00	GSA01 Path error on sensor except for transport path during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06N00	GSA02 Path error on sensor except for transport path during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06P00	GSA03 Path error on sensor except for transport path during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06Q00	GSD01 Path error on sensor except for transport path during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y06W00	GS802 Path error on sensor except for transport path during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07100	Error occurred by the notes disorder in GS801 during Collect cash	1. Open the upper unit. 2. Check the Front Transport Path(4) knob rotates softly 3.Check remained Notes and substance in the upper Transport Path4. Open the customer service module (CSM)5. Open the BC(5) 6.Remove notes and substance in the Front Transport Path(4) 7. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y07200	Error occurred by the notes disorder in GS002 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07300	Error occurred by the notes disorder in GS003 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07400	Error occurred by the notes disorder in GS004 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07500	Error occurred by the notes disorder in GS005 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07600	Error occurred by the notes disorder in GS006 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07700	Error occurred by the notes disorder in GS014 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07800	Error occurred by the notes disorder in GS018 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07900	Error occurred by the notes disorder in GS020 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07A00	Error occurred by the notes disorder in GS021 during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07C00	Error occurred by the notes disorder in GS030 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y07E00	Error occurred by the notes disorder in GS001 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07H00	Error occurred by the notes disorder in GS618 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07J00	Error occurred by the notes disorder in GS619 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07M00	Error occurred by the notes disorder in GSA01 during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07N00	Error occurred by the notes disorder in GSA02 during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07P00	Error occurred by the notes disorder in GSA03 during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07Q00	Error occurred by the notes disorder in GSD01 during Collect cash	1. Open the lower unit. 4. Remove notes and substance in the MID Transport Path(7)3. Rotate MID Transport Knob to remove notes4. Open the MID Transport5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y07W00	Error occurred by the notes disorder in GS802 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y0D100	Reject excess error (continue Reject error) during Collect cash	1. Check the Rejected denomination during Collect cash(Including denomination which did not set up in the cassette)
5Y0D200	Reject excess error (notes excess error) during Collect cash	1. Check the Rejected denomination during Collect cash(Including denomination which did not set up in the cassette)
5Y0D300	Reject excess error (Unappointed notes error) during Collect cash	1. Check the Rejected denomination during Collect cash(Including denomination which did not set up in the cassette)
5Y0D400	Reject excess error (Cassette note error) during Collect cash	1. Check the Rejected denomination during Collect cash(Including denomination which did not set up in the cassette)

Problem Code	Problem Description	Troubleshooting
5Y0D500	Reject excess error (2notes) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0D600	Reject excess error (Gap error(1note)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0D700	Reject excess error (Gap error(2notes)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0D800	Reject excess error (skew error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0D900	Reject excess error (shift error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DA00	Reject excess error (Max length error(1note)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DB00	Reject excess error (Max length error(2notes)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DC00	Reject excess error (Max length error(3notes)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DD00	Reject excess error (Max length error(4notes)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DE00	Reject excess error (Min length error(1note)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DF00	Reject excess error (Min length error(2notes)) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Open the Recycle Cassette4. Stage Down the Recycle Cassette5. Remove the note and substance by using Knob for removing JAM6. Check Sensor pollution
5Y0DG00	Reject excess error (note error) during Collect cash	1. Check the Rejected denomination during Collect cash(Including denomination which did not set up in the cassette)
5Y0DH00	Reject excess error (MR error) during Collect cash	1. Check the Rejected Notes during Collect cash(Failure to Notes recognition)
5Y0DJ00	Reject excess error (IR error) during Collect cash	1. Check the Rejected Notes during Collect cash(Failure to Notes recognition)

Problem Code	Problem Description	Troubleshooting
5Y0DK00	Reject excess error (Edge error) during Collect cash	1. Check the Rejected Notes during Collect cash(Failure to Notes recognition)
5Y0DL00	Reject excess error (Image error) during Collect cash	1. Check the Rejected Notes during Collect cash(Failure to Notes recognition)
5Y0DM00	Reject excess error (UV error) during Collect cash	1. Check the Rejected Notes during Collect cash(Failure to Notes recognition)
5Y0DN00	Reject excess error (Sensor error) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DO00	Deposit count disallowed notes reject excess error during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DP00	Reject excess error (Communication error) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DQ00	Reject excess error (Full & etc) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DR00	Recognition Fail Error (Recognition test fail) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DS00	Recognition Fail Error (No Recognition info) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DT00	Recognition Fail Error (Only STX in Recognition info) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DU00	Recognition Fail Error (Recognition info BCC NG) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DV00	Recognition Fail Error (Recognition info MI NG) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DW00	Recognition Fail Error (Recognition info Index Fail) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DX00	Recognition Fail Error (Info BC Pass Info) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0DY00	Recognition Fail Error (Serial Number Data Format error) during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0F100	GM001 motor doesn't operate at a constant speed when the motor works during Collect cash	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5Y0F200	GM002 motor doesn't operate at a constant speed when the motor works during Collect cash	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Y0F400	GM004 motor doesn't operate at a constant speed when the motor works during Collect cash	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Y0F600	GM006 motor doesn't operate at a constant speed when the motor works during Collect cash	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize

Problem Code	Problem Description	Troubleshooting
5Y0F700	GM007 motor doesn't operate at a constant speed when the motor works during Collect cash	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Y0F900	GM009 motor doesn't operate at a constant speed when the motor works during Collect cash	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status and Initialize4. Check remained Notes and substance in the Transit Transport5. Initialize
5Y0FA00	GM001 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect cash	1. Open the upper unit2. Check the Front Transport Path(2) gear rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Check GS804 Sensor Dark/Light Status and Initialize
5Y0FB00	GM002 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect cash	1. Open the upper unit2. Check the TOP Transport(4) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Y0FC00	GM004 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect cash	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Y0FD00	GM006 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect cash	1. Open the upper unit2. Check the customer service module (CSM 1-1, 1-2) gear and knob rotates softly 3. Check remained Notes and substance in the upper Transport Path4. Initialize
5Y0FE00	GM007 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect cash	1. Open the upper unit2. Check the MID Transport(7) gear, knob rotates softly 3. Check GS017 Sensor Dark/Light Status4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Y0FF00	GM009 motor doesn't operate at a constant speed when the motor works (Encoder reduces) during Collect cash	1. Open the Transit Transport, related system point 2. Check the Transit Transport gear, knob rotates softly 3. Check GS019 Sensor Dark/Light Status4. Check remained Notes and substance in the Transit Transport5. Initialize
5Y0FY00	Fail to Start BM Low Speed Control during Collect cash (Motor Encoder Error)	1. Open the lower, upper unit2. Check remained Notes and substance in the upper, lower Transport Path3. Check motor encoder sensors4. Initialize
5Y0G100	Failure to 3Way Gate 0 degree mode conversion during Collect cash	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Y0G200	Failure to 3Way Gate 120 degree mode conversion during Collect cash	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Y0GB00	Time Out to 3Way Gate Mode conversion during Collect cash	1. Open the upper unit2. Open the customer service module(1) and TOP Transport(4)3. Remove notes and substance in the Transport Path and 3way gate4. Check remained Notes and substance in the upper Transport Path5. Initialize
5Y0GC00	Failure to RTRJ Gate RJC Mode conversion during Collect cash	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate

Problem Code	Problem Description	Troubleshooting
5Y0GD00	Failure to RTRJ Gate RTC Mode conversion during Collect cash	1. Open the lower unit2. Open MID Transport(7)3. Check remained Notes and substance in the RT/RJC4. Check remained Notes in RT/RJC gate
5Y0J200	Box full detection error during Collect cash	1. Open the lower unit2. Open MID Transport(7)3. Check CST inside whether Full or not
5Y0K100	Duplication S/N Error during Collect cash	1. Check the duplicate note and remove the note.2. Operate to initialize BRM(Recovery)
5Y0N400	Jam Message Receive Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y0NA00	Checksum error when notes separate from TSK during Collect cash	1. Operate to initialize BRM(Recovery)
5Y0NC00	length different from separation part to stack part after transport during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y0NK00	BC recognized notes have no cassette to be stacked during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y0Q100	UTC detachment Error during Collect cash	1. Open the upper unit2. Check GS010 Sensor Dark/Light Status3. Check UTC(6) installation condition
5Y0Q200	TSK detachment Error during Collect cash	1. Open the upper unit2. Check GS015 Sensor Dark/Light Status3. Check TSK(5) installation condition
5Y0Q300	BMU Inter Lock Error during Collect cash	1. Check Load/Removal of the upper unit2. Replace a cherry switch when error occurs
5Y0Q400	BMU detackment Error during Collect cash	1. Check Load/Removal of the upper unit
5Y0Q500	Replenishment CST detachment Error during Collect cash	1. Check the safe door open
5Y0Q600	CSM detackment Error during Collect cash	1. Open the upper unit2. Check to open/close CSM3. Check the sensors GS011
5Y0Q800	BMD Inter Lock Error during Collect cash	1. Check the lower Unit load/removal2. Replace a cherry switch when error occurs
5Y0Q900	BMD detachment Error during Collect cash	1. Check the lower Unit load/removal
5Y0QA00	BC Open Error during Collect cash	1. Open the upper unit2. Open the customer service module (CSM)3. Check the lock lever in the BC4. Check GS003 Sensor Dark/Light Status
5Y0QS00	Receive Error Stop CMD during Collect cash	1. Initialize
5Y0R100	BM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y0R200	BM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y0R300	BM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Y0SZ00	Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y10100	RC1 GS101 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y10200	RC1 GS102 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y10500	RC1 GS105 Light Jam during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(A)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Y10Z00	RC1 All Light Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y11100	RC1 GS101 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y11200	RC1 GS102 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y11500	RC1 GS105 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y11Z00	All RC1 Sensor Dark Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y12100	Error occurred by notes remained in RC1 GS101 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y12200	Error occurred by notes remained in RC1 GS102 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y12500	Error occurred by notes remained in RC1 GS105 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y12Z00	Error occurred by notes remained in All RC1 Sensor during Collect cash	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5Y13100	RC1 GS101 Sensor auto calibration error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y13200	RC1 GS102 Sensor auto calibration error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y13500	RC1 GS105 Sensor auto calibration error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y13Z00	All RC1 Sensor auto calibration error during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y14100	RC1 GS101 Extern lights check error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y14200	RC1 GS102 Extern lights check error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y14500	RC1 GS105 Extern lights check error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y14Z00	All RC1 Sensor Extern lights check error during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y15100	RC1 GS101 Path error on transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y15200	RC1 GS102 Path error on transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y15500	RC1 GS105 Path error on transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y15Z00	All RC1 Sensor Path error on transport path during Collect cash	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5Y16100	RC1 GS101 Path error on sensor except for transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y16200	RC1 GS102 Path error on sensor except for transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y16500	RC1 GS105 Path error on sensor except for transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y16Z00	RC1 All Path error on sensor except for transport path during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y17100	Error occurred by the notes disorder in RC1 GS101 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y17200	Error occurred by the notes disorder in RC1 GS102 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y17500	Error occurred by the notes disorder in RC1 GS105 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y17Z00	Error occurred by the notes disorder in RC1 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y1C100	RC Miss-Pickup during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y1C200	Exceeded number of retries for RC1 separation error during Collet cash.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y1C400	RC1 Last Note No Front detect during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y1G100	RC1 Failure of returning notes (GS101,GS102 Sensors detect no notes) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y1G200	RC1 Failure to move PP to stack position during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(A) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5Y1G400	RC1 Failure to upward moving of PP during RC1 stack roller retreat movement during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(A) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5Y1G500	RC1 Failure to stack roller retreat (GS113 Sensor no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1G600	RC1 Stack Roller retreat position disorder during RC Separation during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1G700	RC1 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS107) no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1G800	RC1 Failure to move PP to press position (GS108 Sensor Dark Fail) during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check the upper side of the recycle cassette
5Y1GA00	RC1 Solenoid Echo error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A) and reload4. Replace the cassette when same error occurs
5Y1GB00	RC1 Feed Roller homeposition Sensor(GS107) Light detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GC00	RC1 Feed Roller homeposition Sensor(GS107) Dark detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GD00	RC1 GS101,GS102 Detect notes during move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y1GE00	RC1 GS108 detect dark before move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5Y1GF00	RC1 Notes Setting error during initialize (GS114, Bottom Sensor(GS112) both dark) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5Y1GG00	RC1 Stack Roller Sensor(GS113) detect light during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GH00	RC1 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GJ00	RC1 Stack Roller retreat fail (Motor Overrun) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GK00	RC1 Stack Roller retreat fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GL00	RC1 Feed Roller homeposition fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y1GQ00	RJC Press and Stack position fail during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5Y1GR00	RJC Stack position fail during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5Y1GS00	RC1 RJC Press position fail during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5Y1GT00	RC1 GS151 fail to detect dark when PP moves down during RJC PP Stack during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5Y1GU00	RC1 GS151 fail to detect light when PP moves down during RJC PP Stack during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5Y1GV00	RC1 GS152 fail to detect dark when PP moves down during RJC PP Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5Y1GW00	RC1 GS151 fail to detect light when PP moves down during RJC initialize during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.

Problem Code	Problem Description	Troubleshooting
5Y1GX00	RC1 GS101 detects notes during RJC intialize during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y1J100	RJC Full during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5Y1J200	RC1 No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5Y1J300	Full,Bottom no detect before move RC1 PP to stack position during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS11/GS12 sensor.
5Y1K100	RC1 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y1NL00	RC1 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC1 actual count and SPL screen count.2. Setting RC1 count match actual count.3. Operate to initialize BRM(Recovery)
5Y1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1RF00	RC1 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1RP00	RC1 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1S200	RC1 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1S300	RC1 Task not for sepratation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1SA00	RC1 Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Y1SR00	RC1 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y1SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y20100	RC2 GS201 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y20200	RC2 GS202 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y20500	RC2 GS205 Light Jam during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(B)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Y20Z00	RC2 All Light Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y21100	RC2 GS201 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y21200	RC2 GS202 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y21500	RC2 GS205 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y21Z00	RC2 All Dark Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y22100	Error occurred by notes remained in RC2 GS201 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y22200	Error occurred by notes remained in RC2 GS202 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y22500	Error occurred by notes remained in RC2 GS205 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y22Z00	Error occurred by notes remained in RC2 All Sensor during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y23100	Sensor auto calibration error in RC2 GS201 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y23200	Sensor auto calibration error in RC2 GS202 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y23500	Sensor auto calibration error in RC2 GS205 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y23Z00	Sensor auto calibration error in RC2 All Sensor during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y24100	Extern lights check error in RC2 GS201 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y24200	Extern lights check error in RC2 GS202 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y24500	Extern lights check error in RC2 GS205 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y24Z00	Extern lights check error in RC2 All Sensor during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y25100	Path error on transport path in RC2 GS201 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y25200	Path error on transport path in RC2 GS202 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y25500	Path error on transport path in RC2 GS205 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y25Z00	Path error on transport path in RC2 All Sensor during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y26100	Path error on sensor except for transport path in RC2 GS201 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y26200	Path error on sensor except for transport path in RC2 GS202 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y26500	Path error on sensor except for transport path in RC2 GS205 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y26Z00	Path error on sensor except for transport path in RC2 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y27100	Error occurred by the notes disorder in RC2 GS201 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y27200	Error occurred by the notes disorder in RC2 GS202 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y27500	Error occurred by the notes disorder in RC2 GS205 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y27Z00	Error occurred by the notes disorder in RC2 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y2C100	RC2 Miss-Pickup during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y2C200	Exceeded number of retries for RC2 separation error during Collet cash.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y2C400	RC2 Last Note No Front detect during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.

Problem Code	Problem Description	Troubleshooting
5Y2G100	RC2 Failure of returning notes (GS201,GS202 Sensors detect no notes) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y2G200	RC2 Failure to move PP to stack position during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
5Y2G400	RC2 Failure to upward moving of PP during RC2 stack roller retreat movement during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(B) . 4. Open the recycle cassette door(B).5. Check cassette status to move stage up and down.
5Y2G500	RC2 Failure to stack roller retreat (GS213 Sensor no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2G600	RC2 Stack Roller retreat position disorder during RC Separation during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2G700	RC2 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS207) no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2G800	RC2 Failure to move PP to press position (GS208 Sensor Dark Fail) during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check the upper side of the recycle cassette
5Y2GA00	RC2 Solenoid Echo error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (B) after removing recycle cassette4. Replace the cassette when same error occurs
5Y2GB00	RC2 Feed Roller homeposition Sensor(GS207) Light detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2GC00	RC2 Feed Roller homeposition Sensor(GS207) Dark detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2GD00	RC2 GS201,GS202 Detect notes during move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y2GE00	RC2 GS208 detect dark before move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.

Problem Code	Problem Description	Troubleshooting
5Y2GF00	RC2 Notes Setting error during initialize (GS214, Bottom Sensor(GS212) both dark) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove note.
5Y2GG00	RC2 Stack Roller Sensor(GS213) detect light during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2GH00	RC2 Stack Roller Sensor(GS213) detect dark during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2GJ00	RC2 Stack Roller retreat fail (Motor Overrun) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2GK00	RC2 Stack Roller retreat fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2GL00	RC2 Feed Roller homeposition fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(B).4. Put down the Stage after open the cassette(B) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y2J200	RC2 No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the notes remain after open the recycle cassette door(B).5. Fill up the Notes if there are no notes
5Y2J300	RC2 Full,Bottom no detect before move RC PP to stack position during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(B).4. Check the stage status after open the recycle cassette(B).5. Check contamination of GS211/GS212 sensor.
5Y2K100	RC2 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y2NL00	RC2 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC2 actual count and SPL screen count.2. Setting RC2 count match actual count.3. Operate to initialize BRM(Recovery)
5Y2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Y2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2RF00	RC2 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2RP00	RC2 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2S200	RC2 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2S300	RC2 Task not for separation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2SA00	RC2 Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2SR00	RC2 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y2SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y30100	RC3 GS301 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y30200	RC3 GS302 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y30500	RC3 GS305 Light Jam during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Y30Z00	RC3 All Light Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y31100	RC3 GS301 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y31200	RC3 GS302 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y31500	RC3 GS305 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y31Z00	RC3 All Dark Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y32100	Error occurred by notes remained in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y32200	Error occurred by notes remained in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y32500	Error occurred by notes remained in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y32Z00	Error occurred by notes remained in RC3 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y33100	Sensor auto calibration error in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y33200	Sensor auto calibration error in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y33500	Sensor auto calibration error in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y33Z00	Sensor auto calibration error in RC3 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y34100	Extern lights check error in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y34200	Extern lights check error in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y34500	Extern lights check error in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y34Z00	Extern lights check error in RC3 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y35100	Path error on transport path in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y35200	Path error on transport path in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y35500	Path error on transport path in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y35Z00	Path error on transport path in RC3 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y36100	Path error on sensor except for transport path in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y36200	Path error on sensor except for transport path in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y36500	Path error on sensor except for transport path in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y36Z00	Path error on sensor except for transport path in RC3 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y37100	Error occurred by the notes disorder in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y37200	Error occurred by the notes disorder in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y37500	Error occurred by the notes disorder in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y37Z00	Error occurred by the notes disorder in RC3 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y3C100	RC3 Miss-Pickup during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y3C200	Exceeded number of retries for RC3 separation error during Collet cash.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y3C400	RC3 Last Note No Front detect during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y3G100	RC3 Failure of returning notes (GS301,GS302 Sensors detect no notes) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y3G200	RC3 Failure to move PP to stack position during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
5Y3G400	RC3 Failure to upword moving of PP during RC3 stack roller retreat movement during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(C) . 4. Open the recycle cassette door(C).5. Check cassette status to move stage up and down.
5Y3G500	RC3 Failure to stack roller retreat (GS313 Sensor no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3G600	RC3 Stack Roller retreat position disorder during RC Separation during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3G700	RC3 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS307) no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3G800	RC3 Failure to move PP to press position (GS308 Sensor Dark Fail) during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check the upper side of the recycle cassette

Problem Code	Problem Description	Troubleshooting
5Y3GA00	RC3 RC Solenoid Echo error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (C) after removing recycle cassette4. Replace the cassette when same error occurs
5Y3GB00	RC3 Feed Roller homeposition Sensor(GS307) Light detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3GC00	RC3 Feed Roller homeposition Sensor(GS307) Dark detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3GD00	RC3 GS301,GS302 Detect notes during move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y3GE00	RC3 GS308 detect dark before move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5Y3GF00	RC3 Notes Setting error during initialize (GS314, Bottom Sensor(GS312) both dark) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note.
5Y3GG00	RC3 Stack Roller Sensor(GS313) detect light during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3GH00	RC3 Stack Roller Sensor(GS313) detect dark during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3GJ00	RC3 RC Stack Roller retreat fail (Motor Overrun) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3GK00	RC3 RC Stack Roller retreat fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3GL00	RC3 RC Feed Roller homeposition fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y3J200	RC3 No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the notes remain after open the recycle cassette door(C)5. Fill up the Notes if there are no notes

Problem Code	Problem Description	Troubleshooting
5Y3J300	RC3 Full,Bottom no detect before move RC PP to stack position during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(C).4. Check the stage status after open the recycle cassette(C).5. Check contamination of GS311/GS312 sensor.
5Y3K100	RC3 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y3L100	Remaining notes stack process error in RC3 GS301 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y3L200	Remaining notes stack process error in RC3 GS302 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y3L500	Remaining notes stack process error in RC3 GS305 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y3NL00	RC3 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC3 actual count and SPL screen count.2. Setting RC3 count match actual count.3. Operate to initialize BRM(Recovery)
5Y3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3RF00	RC3 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3RP00	RC3 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3S200	RC3 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3S300	RC3 RC Task not for separation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Y3SA00	RC3 RC Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3SR00	RC3 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y3SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y40100	RC4 GS401 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y40200	RC4 GS402 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y40500	RC4 GS405 Light Jam during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Y40Z00	RC4 All Sensor Light Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y41100	RC4 GS401 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y41200	RC4 GS402 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y41500	RC4 GS405 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y41Z00	RC4 All Sensor Dark Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y42100	Error occurred by notes remained in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y42200	Error occurred by notes remained in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y42500	Error occurred by notes remained in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y42Z00	Error occurred by notes remained in RC4 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y43100	Sensor auto calibration error in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y43200	Sensor auto calibration error in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y43500	Sensor auto calibration error in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y43Z00	Sensor auto calibration error in RC4 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y44100	Extern lights check error in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y44200	Extern lights check error in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y44500	Extern lights check error in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y44Z00	Extern lights check error in RC4 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y45100	Path error on transport path in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y45200	Path error on transport path in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y45500	Path error on transport path in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y45Z00	Path error on transport path in RC4 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y46100	Path error on sensor except for transport path in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y46200	Path error on sensor except for transport path in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y46500	Path error on sensor except for transport path in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y46Z00	Path error on sensor except for transport path in RC4 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y47100	Error occurred by the notes disorder in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y47200	Error occurred by the notes disorder in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y47500	Error occurred by the notes disorder in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y47Z00	Error occurred by the notes disorder in RC4 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y4C100	RC4 Miss-Pickup during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y4C200	Exceeded number of retries for RC4 separation error during Collet cash.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check the upper and the notes.

Problem Code	Problem Description	Troubleshooting
5Y4C400	RC4 Last Note No Front detect during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5Y4G100	RC4 Failure of returning notes (GS401,GS402 Sensors detect no notes) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y4G200	RC4 Failure to move PP to stack position during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(D). 4. Open the recycle cassette door(D).5. Check cassette status to move stage up and down.
5Y4G400	RC4 Failure to upword moving of PP during RC4 stack roller retreat movement during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(D). 4. Open the recycle cassette door(D).5. Check cassette status to move stage up and down.
5Y4G500	RC4 Failure to stack roller retreat (GS413 Sensor no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4G600	RC4 Stack Roller retreat position disorder during RC Separation during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4G700	RC4 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GS407) no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4G800	RC4 Failure to move PP to press position (GS408 Sensor Dark Fail) during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check the upper side of the recycle cassette
5Y4GA00	RC4 RC Solenoid Echo error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Reload the recycle cassette (D) after removing recycle cassette4. Replace the cassette when same error occurs
5Y4GB00	RC4 Feed Roller homeposition Sensor(GS407) Light detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4GC00	RC4 Feed Roller homeposition Sensor(GS407) Dark detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5Y4GD00	RC4 GS401,GS402 Detect notes during move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y4GE00	RC4 GS408 detect dark before move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5Y4GF00	RC4 Notes Setting error during initialize (GS414, Bottom Sensor(GS412) both dark) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note.
5Y4GG00	RC4 Stack Roller Sensor(GS413) detect light during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4GH00	RC4 Stack Roller Sensor(GS413) detect dark during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4GJ00	RC4 RC Stack Roller retreat fail (Motor Overrun) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4GK00	RC4 RC Stack Roller retreat fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4GL00	RC4 RC Feed Roller homeposition fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y4J200	RC4 No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the notes remain after open the recycle cassette door(D)5. Fill up the Notes if there are no notes
5Y4J300	RC4 Full,Bottom no detect before move RC PP to stack position	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(D).4. Check the stage status after open the recycle cassette(D).5. Check contamination of GS411/GS412 sensor.
5Y4K100	RC4 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y4L100	Remaining notes stack process error in RC4 GS401 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y4L200	Remaining notes stack process error in RC4 GS402 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y4L500	Remaining notes stack process error in RC4 GS405 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y4NL00	RC4 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC4 actual count and SPL screen count.2. Setting RC4 count match actual count.3. Operate to initialize BRM(Recovery)
5Y4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4RF00	RC4 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4RP00	RC4 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4S200	RC4 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4S300	RC4 RC Task not for separation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4SA00	RC4 RC Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4SR00	RC4 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y4SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5Y50100	RC5 GS501 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y50200	RC5 GS502 Light Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y50500	RC5 GS505 Light Jam during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Y50Z00	RC5 All Light Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y51100	RC5 GS501 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y51200	RC5 GS502 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y51500	RC5 GS505 Dark Jam during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y51Z00	RC5 All Dark Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y52100	Error occurred by notes remained in RC5 GS501 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y52200	Error occurred by notes remained in RC5 GS502 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Put down the Stage after open the cassette(E) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5Y5J200	RC5 No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the notes remain after open the recycle cassette door(E)5. Fill up the Notes if there are no notes
5Y5J300	RC5 Full,Bottom no detect before move RC PP to stack position during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(E).4. Check the stage status after open the recycle cassette(E).5. Check contamination of GS511/GS512 sensor.
5Y5K100	RC5 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5Y5L100	Remaining notes stack process error in RC5 GS501 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y5L200	Remaining notes stack process error in RC5 GS502 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y5L500	Remaining notes stack process error in RC5 GS505 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Y5NL00	RC5 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC5 actual count and SPL screen count.2. Setting RC5 count match actual count.3. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Y5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5RF00	RC5 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5RP00	RC5 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5S200	RC5 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5S300	RC5 Task not for separation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5SA00	RC5 Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5SR00	RC5 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y5SZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y61H00	GS618/619 Dark Jam error during Collect cash.	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5).3. Open the BC(3) and TOP Transport(4).4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5Y62100	CSM Residue Error during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Y62300	CSM insert notes excess Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Check inserting notes into the CSM are over 300 counts at one time3. If BRM does not recovery open the outer/inner Shutter of CSM3.Remove notes and substance in the CSM(1)
5Y62500	CSM notes disappear Error during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Y62600	CSM notes appear Error during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Y62Z00	CSM Residue Error during during Collect Cash	1. Open the upper unit. 2. Open the outer/inner Shutter of customer service module (CSM)3.Remove notes and substance in the CSM(1) 4. Check whether the sensor is contaminated or not if there are No notes or substance
5Y6G100	Fail to move CSM BP to Stack Position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Y6G200	Fail to move CSM BP to Deposit Position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Y6G300	Fail to move CSM BP to Separation Position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Y6G500	Fail to move CSM BP to Note-Out Position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Y6G600	Fail to move CSM P-Roller to Home position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Y6G800	Fail to CSM return notes during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Y6G900	CSM GM601 Step out during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Y6GA00	Fail to move CSM BP to return note Position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move front and rotates the BP Knob if it is move smoothly
5Y6GB00	Fail to move CSM FP to Deposit Position during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Press and release FP check the FP rotate smoothly5. Check GS652 status(Dark & Light)
5Y6GF00	Fail to move CSM G-Roller to Homeposition during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status
5Y6GG00	Fail to move both CSM P/G-Roller to Homeposition during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the F-Roller Knob check if it rotate smoothly5. Check the GS657 sensor status

Problem Code	Problem Description	Troubleshooting
5Y6M200	CSM Inner Shutter Open Error during Collect cash	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5Y6M300	CSM Inner Shutter Close Error during Collect cash	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5Y6M400	CSM Outer Shutter Open Error during Collect cash	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5Y6M500	CSM Outer Shutter Close Error during Collect cash	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5Y6M600	CSM Outer Shutter is Opened during Collect cash	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate outer shutter knob open and close direction, check shutter move smoothly3. Check GS670/GS671 sensor status if it changed dark and light
5Y6M700	CSM Inner Shutter Open during Stack during Collect cash	1. Open the upper unit2. Press outer shutter lock lever and open the outer Shutters3. Rotate inner shutter knob open and close direction, check shutter move smoothly3. Check GS658/GS659 sensor status if it changed dark and light
5Y6M800	CSM Stopper Home position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5Y6M900	CSM Stopper Stack position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Rotate the PP Knob to move PP Front5. Move Bill Stopper forward/backward and check GS668 sensor status6. Initialize
5Y6MB00	CSM Bill Supporter Up position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5Y6MC00	CSM Bill Supporter Down position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner Shutter of CSM(1)3.Check the notes and substance inside of the CSM4. Check the failure and breakage of Bill Lifter/Support5. Initialize
5Y6P100	CSM PP Withdrawal(Stack) position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

Problem Code	Problem Description	Troubleshooting
5Y6P200	CSM PP Deposit position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6P300	CSM PP Separation position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6P400	CSM PP collect lost notes position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6P500	CSM PP Note-out position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6P600	CSM PP Note-arrange position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6P800	CSM PP Control Stack Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6P900	CSM PP Return note position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6PD00	CSM PP Check semi-note Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize
5Y6PE00	CSM PP Bill SuCSM PPorter Up position Fail during Collect cash	1. Open the upper unit. 2. Open the outer/inner shutter3. Check the notes and substance inside of the CSM and remove notes4. Rotate PP Knob and Move PP forward/backward, check the PP moving smoothly5. Check GS650/GS660 sensor status when PP is moving6. Initialize

5Y8HA11	GS801A, GS801B, GS802B Sensor Error during Collect cash	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5Y8HA12	GS802A, GS802B Sensor Error during Collect cash	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Y8HA13	GS801A, GS802A, GS802B Sensor Error during Collect cash	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Y8HA14	GS801B, GS802A, GS802B Sensor Error during Collect cash	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Y8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Collect cash	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Y8HB01	MR Sensor Level Error during Collect cash	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Y8HC02	UV_01 Sensor Level Error during Collect cash	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Y8HF03	CIS Shading data loading Fail during Collect cash	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5Y8HF04	Detection DB Table loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF05	BC FPGA Data checksum Fail during Collect cash	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5Y8HF06	BC FPGA Configuration Fail during Collect cash	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Y8HF07	BC FPGA Header Information Loading Fail during Collect cash	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Y8HF08	BC FPGA Initialize Fail during Collect cash	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Y8HF09	BC FPGA VERSION Fail during Collect cash	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Y8HF11	Detection DB #01 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF12	Detection DB #02 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF13	Detection DB #03 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF14	Detection DB #04 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Y8HF15	Detection DB #05 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF16	Detection DB #06 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF17	Detection DB #07 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF18	Detection DB #08 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF19	Detection DB #09 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HF20	Detection DB #10 loading Fail during Collect cash	1.Download DB again after deleting all recognition DB2. Operate to initialize BRM(Recovery)
5Y8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Collect cash	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Collect cash	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG03	BC Transaction Ready Fail When Receive BC READY Command during Collect cash	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Y8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Collect cash	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Collect cash	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Collect cash	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG07	Receive BC Unknown Command during Collect cash	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5Y8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Collect cash	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Collect cash	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Collect cash	1. Check the BC recognition DB of country.2. Download DB again after deleting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5Y8HG11	No Nation Code When Receive BC READY Command during Collect cash	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Y8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Collect cash	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization
5Y8HG20	Fail to Initialize CIS When Receive BC READY Command during Collect cash	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Y8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Collect cash	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Y8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Collect cash	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize3. Reboot the system when same error occurs even though there is no substance.
5Y8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Collect cash	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Y8HG24	ENCODER Mode Set Error When Receive BC READY Command during Collect cash	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5Y8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Collect cash	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Collect cash	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Collect cash	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Collect cash	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Collect cash	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Collect cash	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Collect cash	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Collect cash	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Y8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Collect cash	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Collect cash	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Collect cash	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Collect cash	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Collect cash	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Collect cash	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Collect cash	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Collect cash	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Collect cash	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG46	Bill Number Error When Receive Check No Write Command during Collect cash	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Collect cash	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Collect cash	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Collect cash	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HH01	Fail to Delete NAND FLASH during Collect cash	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Y8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Collect cash	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Y8HH03	Fail to Download Detection DB during Collect cash	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Y8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Collect cash	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5Y8HH05	Detection DB Download File Check Error during Collect cash	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5Y8HH06	Detection DB Download File Size Error during Collect cash	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5Y8HH07	DB Table Save Error After Download Detection DB during Collect cash	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Y8HH08	Over Detection DB Download (Over 10) during Collect cash	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Y8HH09	Detection DB Header Information Error during Collect cash	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5Y8HH10	EP Download Fail during Collect cash	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5Y8HH11	EP Download Check Error during Collect cash	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Y8HH12	EP Download File Size Error during Collect cash	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Y8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Collect cash	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Y8HH14	BC FPGA Download Fail during Collect cash	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5Y8HH15	Header Information Save Error After BC FPGA Download during Collect cash	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5Y8HH16	Not Provide BC FPGA Download during Collect cash	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5Y8HH17	EEPROM READ/WRITE Error during Collect cash	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5Y8HH18	Receive Unit Serial Number Undefined Option during Collect cash	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5Y8HH19	Receive USB Undefined Command during Collect cash	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5Y8HH20	No BC Process Note When Receive Image Upload Command during Collect cash	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH21	FC1 Set Error When Receive Image Upload Command during Collect cash	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5Y8HH22	BC is Processing Note When Receive Image Upload Command during Collect cash	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH23	FC2 Set Error When Receive Image Upload Command during Collect cash	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH24	Not Provide Total Image Upload Function during Collect cash	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Y8HH25	Not Provide Note Number Detection Image Upload Function during Collect cash	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH26	FC2 Set Error When Receive Image Information Upload Command during Collect cash	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Collect cash	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Collect cash	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Collect cash	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Collect cash	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Collect cash	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Collect cash	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Collect cash	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Collect cash	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Y8HI01	RecogTask Messeage Timeout Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Y8HI02	ScanTask Messeage Timeout Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Y8HI03	UartTask Messeage Timeout Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Y8HI04	BcUsbTask Messeage Timeout Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Y8HJ01	Algorithm Initialize Fail during Collect cash	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HJ02	Algorithm Ready Fail during Collect cash	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HJ03	Algorithm Information Set Error during Collect cash	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Y8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Collect cash	1. Retry the operation
5Y8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Collect cash	1. Check the number of CST Setting notes info
5Y8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Collect cash	1. Check Withdrawal notes setting
5Y8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Collect cash	1. Check Withdrawal notes info
5Y8HS01	FPGA Write Data Error When Initialize Scan Driver during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS05	Not Process Shading When Initialize Scan Driver during Collect cash	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5Y8HS08	Fail to Set DAC When Initialize Scan Driver during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS11	FPGA Write Data Error When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS13	Fail to Set CIS Led On Value When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Y8HS14	Fail to Set Source of Scan Ligh When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS15	Not Process Shading When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS17	Fail to Set AFE Chip When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS18	Fail to Set DAC When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS19	MR/UV/DD Sampling Start Error When BC Ready during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS1A	Fail to Set 2-Notes DAC When BC Ready during Collect cash	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5Y8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Collect cash	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5Y8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS28	Fail to Set DAC When Stop BC during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Collect cash	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Y8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Collect cash	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5Y8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Collect cash	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5Y8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Collect cash	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5Y8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Collect cash	1. Retry the operation2. Change BC
5Y8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Collect cash	1. Retry the operation2. Change BC
5Y8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Collect cash	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5Y8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Collect cash	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5Y8HS38	Max Ontime Ove When Process CIS Shadingr – Use in Plant during Collect cash	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5Y8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Collect cash	1. Retry the operation2. Change BC

Problem Code	Problem Description	Troubleshooting
5Y8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Collect cash	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5Y8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Collect cash	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5Y8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Collect cash	1. Retry the operation2. Change BC
5Y8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8R200	BC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8R300	BC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8R600	BC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8S100	BCU response MI error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8S200	BCU response BCC error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8S300	BCU response Sub MI error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8S400	BCU response Parameter error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Y8S900	BCU response Timeout Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YA2100	Error occurred by notes remained in GS801 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2200	Error occurred by notes remained in GS002 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2300	Error occurred by notes remained in GS003 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5YA2400	Error occurred by notes remained in GS004 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2500	Error occurred by notes remained in GS005 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2600	Error occurred by notes remained in GS006 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2700	Error occurred by notes remained in GS014 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2800	Error occurred by notes remained in GS018 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2900	Error occurred by notes remained in GS020 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2A00	Error occurred by notes remained in GS021 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2C00	Error occurred by the notes remained in the BCU(CIS Sensor or DD Sensor) during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2E00	Error occurred by notes remained in GS001 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2H00	Error occurred by notes remained in GS618 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5YA2J00	Error occurred by notes remained in GS619 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2K00	Error occurred by notes remained in GS701,702 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2M00	Error occurred by notes remained in GSA01 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2N00	Error occurred by notes remained in GSA02 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2P00	Error occurred by notes remained in GSA03 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2Q00	Error occurred by notes remained in GSD01 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YA2W00	Error occurred by notes remained in GS802 during Collect cash	1. Open the upper unit. 2. Open the customer service module (CSM 1-1, 1-2) and TSK(5)3. Open the BC(3) and TOP Transport(4)4. Remove notes and substance in the Transport Path(1,2,3,4,5) 5. Check whether the sensor is contaminated or not if there are No notes or substance
5YAA100	UTC open Error before operation Collect cash	1. Open the upper unit. 2. Check the UTC removal and reinstallation
5YAA200	TSK open Error before operation Collect cash	1. Open the upper unit. 2. Check the TSK open and close
5YAA300	BMU Inter Lock Error before operation Collect cash	1. Check BMU open and close
5YAA400	BMU open Error before operation Collect cash	1. Check BMU open and close
5YAA500	Replenishment CST open Error before operation Collect cash	1. Check the Transit CST installation
5YAA600	CSM open Error before operation Collect cash	1. Open the upper unit. 2. Check CSM Open/Close
5YAA800	BMD Inter Lock Error before operation Collect cash	1. Open the lower unit. 2. Check the BMD open and close
5YAA900	BMD open Error before operation Collect cash	1. Open the lower unit. 2. Check the BMD open and close
5YAAA00	BC Open Error before operation Collect cash	1. Open the upper unit. 2. Check BC Open/Close

Problem Code	Problem Description	Troubleshooting
5YAB00	RC Full Error before operation Collect cash	1. Open the lower unit. 2. Check RC Full and remove notes
5AAC00	RJC Full Error before operation Collect cash	1. Open the upper unit. 2. Check RJC Full and remove notes
5AAD00	UTC Full Error before operation Collect cash	1. Open the upper unit. 2. Remove UTC and open the UTC Door3. Remove notes and reinstallation UTC
5AAE00	RTC Full Error before operation Collect cash	1. Open the lower unit. 2. Remove RT/RJC and open the Door3. Remove notes and reinstall RT/RJC
5AAF00	RC Empty Error before operation Collect cash	1. Open the lower unit. 2. Remove RC and open the RC Door, Check the Empty Status3. Reinstall the RC
5AAG00	Suspected note RC open Error before operation Collect cash	1. Open the lower unit. 2. Check the RC removal and reinstall
5AAJ00	Collect cash is not supported in the setting Test Mode	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AE100	Received operation command without Initial Info Set during Collect cash	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AE200	Status on not operation reception command during Collect cash	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AE300	Received operation command without System Info Read during Collect cash	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AE400	Transaction was executed without Initializing after power on during Collect cash	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AE500	Received operation command on a device that does not support the Transit CST or the rear transit CST during Collect cash.	1. Restart over AP-SP2. Do transaction operation follow by set up read system Info for TM Test-> Initail Info Set -> Initialization
5AEE00	RBU RS485 communication sequence disorder during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AEF00	RBU RS485 connection line disorder during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AEL00	RBU communication was not ready after power on during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization
5AH600	Failure to check clearing NVRAM during Collect cash	1. Operate to initialize BRM(Recovery)
5AHF00	Transaction count exists but GS801A sensor no change during Collect cash	1. Check GS801A2. Operate to initialize BRM(Recovery)
5AHG00	Transaction count exists but GS801B sensor no change during Collect cash	1. Check GS801B2. Operate to initialize BRM(Recovery)
5AHH00	Transaction count exists but GS802A sensor no change during Collect cash	1. Check GS802A2. Operate to initialize BRM(Recovery)
5AHJ00	Transaction count exists but GS802B sensor no change during Collect cash	1. Check GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5YAJ200	Semi error of CST full detection during operation ready in collecting cash	1. Open the lower unit. 2. Check RC Full and remove notes
5YAJ300	Semi error of CST full detection during collecting cash	1. Open the lower unit. 2. Check RC Full and remove notes
5YAJ600	Semi error of RC all empty detection during operation ready in collecting cash	1. Initialize
5YAJ700	Semi error of RC all empty detection during collecting cash	1. Initialize
5YAJB00	Semi error of received stop command during replenishment/collect cash	1. Initialize
5YAJC00	Semi error of no available RJC during replenishment/collect cash	1. Initialize
5YAJD00	Semi error of no available CST during replenishment/collect cash	1. Initialize
5YANA00	CSM stack count is different with BC Normal Pass count during Collect	1. Operate to initialize BRM(Recovery)
5YAR100	Message timeout error during operation ready during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YAR200	Message timeout error during transation operation during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YAR300	Message timeout error during error postprocessing during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YAR800	RBU/BC sensor auto dimming response message timeout error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YARC00	BC response message timeout error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YARJ00	Message timeout error during Stop Ready during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YAS700	Comparative error when Collect cash denomination/note count set during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASB00	Stop command Receive Semi-normal during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASD00	Set Count in DPC or RJC during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASE00	USB Timeout occurs due to excessive RC Separation error Retry during Collet cash.	1. Operate to initialize(recover) BRM.2. Reboot the system when the same error occurs after initialization.

Problem Code	Problem Description	Troubleshooting
5YASM00	RC6 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASP00	RC7 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASR00	Max withdrawal count excess request error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASS00	RC1 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YAST00	RC2 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASU00	RC3 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASV00	RC4 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASW00	RC5 is not possible for Collect during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASX00	Requested withdrawal count is more than the Residue in the Cassette during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASY00	Requested count is 0 during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YASZ00	No Separation RC during Collect+Requested count 0 or RC breakdown) during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YBH100	RC1 EEPROM Read Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH200	RC2 EEPROM Read Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH300	RC3 EEPROM Read Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH400	RC4 EEPROM Read Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH500	RC5 EEPROM Read Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

Problem Code	Problem Description	Troubleshooting
5YBH600	RC6 EEPROM Read Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH700	RC1 EEPROM Write Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH800	RC2 EEPROM Write Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization
5YBH900	RC3 EEPROM Write Error during Collect cash	1. Check the RC Connector2. Reload the RC after removing RC3. Replace the RC if same error occurs during initialization

5YCC100	RC6 Miss-Pickup during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check the upper and the notes.
5YCC200	Exceeded number of retries for RC6 separation error during Collet cash.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check the upper and the notes.
5YCC400	RJC Last Note No Front detect during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(A).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5YCG100	RC6 Failure of returning notes (GSC01,GSC02 Sensors detect no notes) during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YCG200	RC6 Failure to move PP to stack position during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5YCG400	RC6 Failure to upword moving of PP during RC6 stack roller retreat movement during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(8). 4. Open the recycle cassette door(8).5. Check cassette status to move stage up and down.
5YCG500	RC6 Failure to stack roller retreat (GSC13 Sensor no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCG600	RC6 Stack Roller retreat position disorder during RC Separation during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCG700	RC6 RC Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSC07) no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCG800	RC6 Failure to move PP to press position (GSC08 Sensor Dark Fail) during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the stage status after open the recycle cassette(8).5. Check the upper side of the recycle cassette
5YCGA00	RC6 RC Solenoid Echo error during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8) and reload.4. Replace the cassette when same error occurs.
5YCGB00	RC6 Feed Roller homeposition Sensor(GSC07) Light detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5YCGC00	RC6 Feed Roller homeposition Sensor(GSC07) Dark detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCGD00	RC6 GSC01,GSC02 Detect notes during move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YCGE00	RC6 GSC08 detect dark before move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5YCFG00	RC6 Notes Setting error during initialize (GSC14, Bottom Sensor(GSC12) both dark) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5YCGG00	RC6 Stack Roller Sensor(GSC13) detect light during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCGH00	RC6 Stack Roller Sensor(GSC13) detect dark during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCGJ00	RC6 RC Stack Roller retreat fail (Motor Overrun) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCGK00	RC6 RC Stack Roller retreat fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCGL00	RC6 RC Feed Roller homeposition fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YCGQ00	RJC Press and Stack position fail during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5YCGR00	RJC Stack position fail during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette
5YCGS00	RC6 RJC Press position fail during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the reject cassette(8).4. Check the stage status after open the reject cassette(8).5. Check the upper side of the reject cassette

Problem Code	Problem Description	Troubleshooting
5YCGT00	RC6 GSC51 fail to detect dark when PP moves down during RJC PP Stack during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5YCGU00	RC6 GSC51 fail to detect light when PP moves down during RJC PP Stack during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5YCGV00	RC6 GSC52 fail to detect dark when PP moves down during RJC PP Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5YCGW00	RC6 GSC51 fail to detect light when PP moves down during RJC initialize during Collect cash	1. Open the lower unit.2. Open the mid transport path.3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.
5YCGX00	RC6 GSC01 detects notes during RJC intialize during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YCJ100	RC6 RJC Full during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the reject cassette(8).4. Put down the Stage after open the cassette(8) door.5. Remove note.
5YCJ200	RC6 RC No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(8).4. Check the notes remain after open the recycle cassette door(8)5. Fill up the Notes if there are no notes
5YCJ300	RC6 Full,Bottom no detect before move RC PP to stack position during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(A).4. Check the stage status after open the recycle cassette(A).5. Check contamination of GS111/GS112 sensor.
5YCK100	RC6 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5YCNL00	RC6 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC6 actual count and SPL screen count.2. Setting RC6 count match actual count.3. Operate to initialize BRM(Recovery)
5YCR100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCR200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCR300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCR600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5YCRF00	RC6 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCRP00	RC6 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCS200	RC6 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCS300	RC6 Task not for separation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCSA00	RC6 Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCSR00	RC6 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YCSZ00	No enable RC to separate during Withdrawal, Collect Cash, Withdrawal for adjustment (The number of requested notes is 1 or RC out of work)	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YE0100	CST GS901 Light Jam during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE0200	CST GS902 Light Jam during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE0500	CST GS905 Light Jam during Collect cash	1. Remove note in the transit path.2. Open the transit cassette door after remove the cassette.3. Remove note in the upper side.
5YE0Z00	CST All Light Jam during Collect cash	1. Operate to initialize BRM.(Recovery)
5YE1100	CST GS901 Dark Jam during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE1200	CST GS902 Dark Jam during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE1500	CST GS905 Dark Jam during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE1Z00	CST All Dark Jam during Collect cash	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5YE2100	Error occurred by notes remained in CST GS901 during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE2200	Error occurred by notes remained in CST GS902 during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance
5YE2500	Error occurred by notes remained in CST GS905 during Collect cash	1. Remove the transit cassette.2. Put down the Stage after open the cassette door.3. Remove note in the upper side.4. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5YF3100	RC7 GSF01 Sensor auto calibration error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF3200	RC7 GSF02 Sensor auto calibration error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF3500	RC7 GSF05 Sensor auto calibration error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF3Z00	All RC7 Sensor auto calibration error during Collect cash	1. Operate to initialize BRM.(Recovery)
5YF4100	RC7 GSF01 Extern lights check error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF4200	RC7 GSF02 Extern lights check error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF4500	RC7 GSF05 Extern lights check error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF4Z00	All RC7 Sensor Extern lights check error during Collect cash	1. Operate to initialize BRM.(Recovery)
5YF5100	RC7 GSF01 Path error on transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF5200	RC7 GSF02 Path error on transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF5500	RC7 GSF05 Path error on transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF5Z00	All RC7 Sensor Path error on transport path during Collect cash	1. Operate to initialize BRM.(Recovery)

Problem Code	Problem Description	Troubleshooting
5YF6100	RC7 GSF01 Path error on sensor except for transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF6200	RC7 GSF02 Path error on sensor except for transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF6500	RC7 GSF05 Path error on sensor except for transport path during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF6Z00	RC7 All Path error on sensor except for transport path during Collect cash	1. Operate to initialize BRM.(Recovery)
5YF7100	Error occurred by the notes disorder in RC7 GSF01 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF7200	Error occurred by the notes disorder in RC7 GSF02 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF7500	Error occurred by the notes disorder in RC7 GSF05 during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YF7Z00	Error occurred by the notes disorder in RC7 All during Collect cash	1. Operate to initialize BRM.(Recovery)
5YFC100	RC Miss-Pickup during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check the upper and the notes.
5YFC200	Exceeded number of retries for RC7 separation error during Collet cash.	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F)..4. Put down the Stage after open the cassette(F) door.5. Remove note in the upper side.6. Check the upper and the notes.
5YFG100	RC7 Failure of returning notes (GSF01,GSF02 Sensors detect no notes) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YFG200	RC7 Failure to move PP to stack position during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(F) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.

Problem Code	Problem Description	Troubleshooting
5YFG400	RC7 Failure to upword moving of PP during RC7 stack roller retreat movement during Collect cash	1. Open the lower unit. 2. Open the mid transport path. 3. Remove the recycle cassette(F) . 4. Open the recycle cassette door(A).5. Check cassette status to move stage up and down.
5YFG500	RC7 Failure to stack roller retreat (GS113 Sensor no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFG600	RC7 Stack Roller retreat position disorder during RC Separation during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFG700	RC7 Feed Roller Homeposition Fail (Feed Roller Homeposition Sensor(GSF07) no change) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFG800	RC7 Failure to move PP to press position (GSF08 Sensor Dark Fail) during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check the upper side of the recycle cassette
5YFGA00	RC7 Solenoid Echo error during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F) and reload4. Replace the cassette when same error occurs
5YFGB00	RC7 Feed Roller homeposition Sensor(GSF07) Light detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFGC00	RC7 Feed Roller homeposition Sensor(GSF07) Dark detect fail during RC Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFGD00	RC7 GSF01,GSF02 Detect notes during move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5YFGE00	RC7 GSF08 detect dark before move RC Feed Roller to homeposition during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5YFGF00	RC7 Notes Setting error during initialize (GSF14, Bottom Sensor(GSF12) both dark) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove note.
5YFGG00	RC7 Stack Roller Sensor(GS113) detect light during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly

Problem Code	Problem Description	Troubleshooting
5YFGH00	RC7 Stack Roller Sensor(GS113) detect dark during RC FM Stack during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFGJ00	RC7 Stack Roller retreat fail (Motor Overrun) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFGK00	RC7 Stack Roller retreat fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFGL00	RC7 Feed Roller homeposition fail (Motor speed error) during Collect cash	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(F).4. Put down the Stage after open the cassette(A) door.5. Remove jammed notes or substance using any wheels on the upper side.6. Check the Pickup-Roller rotates softly
5YFJ200	RC7 No Residue during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the notes remain after open the recycle cassette door(A)5. Fill up the Notes if there are no notes
5YFJ300	Full,Bottom no detect before move RC7 PP to stack position during Collect cash	1. Open the lower unit2. Open the mid transport path3. Remove the recycle cassette(F).4. Check the stage status after open the recycle cassette(F).5. Check contamination of GSF11/GSF12 sensor.
5YFK100	RC7 separation request notes is 0 during Collect cash	1. Operate to initialize BRM.(Recovery)
5YFNL00	RC7 Requested notes is more than Residue notes,separation stop during Collect cash	1. Check RC7 actual count and SPL screen count.2. Setting RC7 count match actual count.3. Operate to initialize BRM(Recovery)
5YFRF00	RC7 Feed Motor response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YFRP00	RC7 PP response timeout during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YFS200	RC7 Receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YFS300	RC7 Task not for separation receive separation command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YFSA00	RC7 Sub Task receive undefined command during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5YFSR00	RC7 Sub Task for Wait Setting Error during Collect cash	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization

Problem Code	Problem Description	Troubleshooting
5YUS100	USB Bulk Sequence Error during Collect cash.	1. Restart over AP-SP.
5YUS300	USB Bulk Received Length Error during Collect cash.	1. Reboot the system.
5YUS400	Message transmission Error from USB to Main Task during Collect cash.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5YUS500	Message reception Error from MainTask to USB during Collect cash.	1. Operate to initialize BRM(Recovery).2. Reboot the system when same error occurred (message timeout error) after initialization.
5YUSCMD	Bulk command data check error during Collect cash. (USB communication failure)	1. Restart over AP-SP
5YUSCRC	CRC data check error during Collect cash. (USB communication failure)	1. Restart over AP-SP
5YUSLEN	Bulk length error during Collect cash. (USB communication failure)	1. Restart over AP-SP
5Z1R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z1R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z1R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z1R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z2R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z2R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z2R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z2R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z30100	RC3 GS301 Light Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z30200	RC3 GS302 Light Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z30500	RC3 GS305 Light Jam during Etc	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(C)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Z31100	RC3 GS301 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z31200	RC3 GS302 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z31500	RC3 GS305 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z32100	Error occurred by notes remained in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z32200	Error occurred by notes remained in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z32500	Error occurred by notes remained in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z33100	Sensor auto calibration error in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z33200	Sensor auto calibration error in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z33500	Sensor auto calibration error in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z34100	Extern lights check error in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z34200	Extern lights check error in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z34500	Extern lights check error in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z35100	Path error on transport path in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z35200	Path error on transport path in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z35500	Path error on transport path in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z36100	Path error on sensor except for transport path in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z36200	Path error on sensor except for transport path in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z36500	Path error on sensor except for transport path in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z37100	Error occurred by the notes disorder in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z37200	Error occurred by the notes disorder in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z37500	Error occurred by the notes disorder in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z3L100	Remaining notes stack process error in RC3 GS301 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z3L200	Remaining notes stack process error in RC3 GS302 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z3L500	Remaining notes stack process error in RC3 GS305 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(C).4. Put down the Stage after open the cassette(C) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z3R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z3R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z3R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z3R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z40100	RC4 GS401 Light Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z40200	RC4 GS402 Light Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z40500	RC4 GS405 Light Jam during Etc	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(D)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).

Problem Code	Problem Description	Troubleshooting
5Z41100	RC4 GS401 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z41200	RC4 GS402 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z41500	RC4 GS405 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z42100	Error occurred by notes remained in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z42200	Error occurred by notes remained in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z42500	Error occurred by notes remained in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z43100	Sensor auto calibration error in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z43200	Sensor auto calibration error in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z43500	Sensor auto calibration error in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z44100	Extern lights check error in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z44200	Extern lights check error in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z44500	Extern lights check error in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z45100	Path error on transport path in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z45200	Path error on transport path in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z45500	Path error on transport path in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z46100	Path error on sensor except for transport path in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z46200	Path error on sensor except for transport path in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z46500	Path error on sensor except for transport path in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z47100	Error occurred by the notes disorder in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z47200	Error occurred by the notes disorder in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z47500	Error occurred by the notes disorder in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z4L100	Remaining notes stack process error in RC4 GS401 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z4L200	Remaining notes stack process error in RC4 GS402 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z4L500	Remaining notes stack process error in RC4 GS405 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(D).4. Put down the Stage after open the cassette(D) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z4R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z4R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z4R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z4R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z50100	RC5 GS501 Light Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z50200	RC5 GS502 Light Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z50500	RC5 GS505 Light Jam during Etc	1. Open the lower unit2. Open the mid transport path3. Remove the jam on the recycle cassette(E)4. Rotate the knob of the mid transport path5. Remove the jam on the mid transport path(7).
5Z51100	RC5 GS501 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z51200	RC5 GS502 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z51500	RC5 GS505 Dark Jam during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z52100	Error occurred by notes remained in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z52200	Error occurred by notes remained in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z52500	Error occurred by notes remained in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z53100	Sensor auto calibration error in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z53200	Sensor auto calibration error in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z53500	Sensor auto calibration error in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z54100	Extern lights check error in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z54200	Extern lights check error in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z54500	Extern lights check error in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z55100	Path error on transport path in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z55200	Path error on transport path in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z55500	Path error on transport path in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z56100	Path error on sensor except for transport path in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z56200	Path error on sensor except for transport path in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z56500	Path error on sensor except for transport path in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z57100	Error occurred by the notes disorder in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z57200	Error occurred by the notes disorder in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z57500	Error occurred by the notes disorder in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance

Problem Code	Problem Description	Troubleshooting
5Z5L100	Remaining notes stack process error in RC5 GS501 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z5L200	Remaining notes stack process error in RC5 GS502 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z5L500	Remaining notes stack process error in RC5 GS505 during Etc	1. Open the lower unit2. Open the Mid Transport Path3. Remove the recycle cassette(E).4. Put down the Stage after open the cassette(E) door.5. Remove note in the upper side.6. Check whether the sensor is contaminated or not if there are No notes or substance
5Z5R100	RC response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z5R200	RC response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z5R300	RC response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z5R600	RC response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z6R100	CSM response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z6R200	CSM response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z6R300	CSM response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z6R600	CSM response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z77100	Error occurred by the notes disorder in TSK GS701 during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z77200	Error occurred by the notes disorder in TSK GS702 during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z77300	Error occurred by the notes disorder in TSK GS703,4 during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)

Problem Code	Problem Description	Troubleshooting
5Z77Z00	Error occurred by the notes disorder in TSK All during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z7L100	Remaining notes stack process error in TSK GS701 during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z7L200	Remaining notes stack process error in TSK GS702 during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z7L300	Remaining notes stack process error in TSK GS703,4 during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z7LZ00	Remaining notes stack process error in TSK All during Etc	1. Open the upper unit2. Open the Door of TSK(Temporary StackKer) (5)3. Lock the FP(Front Plate) pushing hand4. Rotate a knob of TSK(5)5. Remove notes and substance TSK(5)
5Z7R100	TSK response Timeout during Ready process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z7R200	TSK response Timeout during Transaction	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z7R300	TSK response Timeout during Error handle process	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z7R600	TSK response Timeout during Unit Test	1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred (message timeout error) after initialization
5Z8HA01	GS801A Sensor Error during Etc	1. Check GS801A2. Operate to initialize BRM(Recovery)
5Z8HA02	GS801B Sensor Error during Etc	1. Check GS801B2. Operate to initialize BRM(Recovery)
5Z8HA03	GS801A, GS801B Sensor Error during Etc	1. Check GS801A, GS801B2. Operate to initialize BRM(Recovery)
5Z8HA04	GS802A Sensor Error during Etc	1. Check GS802A2. Operate to initialize BRM(Recovery)
5Z8HA05	GS801A, GS802A Sensor Error during Etc	1. Check GS801A, GS802A2. Operate to initialize BRM(Recovery)
5Z8HA06	GS801B, GS802A Sensor Error during Etc	1. Check GS801B, GS802A2. Operate to initialize BRM(Recovery)
5Z8HA07	GS801A, GS801B, GS802A Sensor Error during Etc	1. Check GS801A, GS801B, GS802A2. Operate to initialize BRM(Recovery)
5Z8HA08	GS802B Sensor Error during Etc	1. Check GS802B2. Operate to initialize BRM(Recovery)
5Z8HA09	GS801A, GS802B Sensor Error during Etc	1. Check GS801A, GS802B2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Z8HA10	GS801B, GS802B Sensor Error during Etc	1. Check GS801B, GS802B2. Operate to initialize BRM(Recovery)
5Z8HA11	GS801A, GS801B, GS802B Sensor Error during Etc	1. Check GS801A, GS801B, GS802B2. Operate to initialize BRM(Recovery)
5Z8HA12	GS802A, GS802B Sensor Error during Etc	1. Check GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Z8HA13	GS801A, GS802A, GS802B Sensor Error during Etc	1. Check GS801A, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Z8HA14	GS801B, GS802A, GS802B Sensor Error during Etc	1. Check GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Z8HA15	GS801A, GS801B, GS802A, GS802B Sensor Error during Etc	1. Check GS801A, GS801B, GS802A, GS802B2. Operate to initialize BRM(Recovery)
5Z8HB01	MR Sensor Level Error during Etc	1. Check MR Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Z8HC02	UV_01 Sensor Level Error during Etc	1. Check UV Sensor cable.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Z8HF03	CIS Shading data loading Fail during Etc	1. Operate shading in the BC CIS2. Operate to initialize BRM(Recovery)
5Z8HF04	Detection DB Table loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF05	BC FPGA Data checksum Fail during Etc	1. Check to BC FPGA File2. Operate to initialize BRM(Recovery)
5Z8HF06	BC FPGA Configuration Fail during Etc	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Z8HF07	BC FPGA Header Information Loading Fail during Etc	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Z8HF08	BC FPGA Initialize Fail during Etc	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Z8HF09	BC FPGA VERSION Fail during Etc	1. Re-download BC FPGA2. Change the BC B/D if continuous error.
5Z8HF11	Detection DB #01 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF12	Detection DB #02 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF13	Detection DB #03 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF14	Detection DB #04 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF15	Detection DB #05 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF16	Detection DB #06 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Z8HF17	Detection DB #07 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF18	Detection DB #08 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF19	Detection DB #09 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HF20	Detection DB #10 loading Fail during Etc	1.Download DB again after delecting all recognition DB2. Operate to initialize BRM(Recovery)
5Z8HG01	Mode Set Error When Receive BC MODE Command (Mode Value is not 1 or 2 ) during Etc	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG02	Detection Level Set Error When Receive BC MODE Command (Detection Level Value is 0 ) during Etc	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG03	BC Transaction Ready Fail When Receive BC READY Command during Etc	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Z8HG04	Mode Set Error When Receive BC READY Command (Mode Value is not 1 or 2 ) during Etc	1. Check BC mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG05	Detection Level Set Error When Receive BC READY Command (Detection Level Value is 0 ) during Etc	1. Check BC recognition level value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG06	BC Entry Direction Set Error When Receive BC READY Command (Not Deposit-Withdrawal/Stack Direction ) during Etc	1. Check BC putting direction.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG07	Receive BC Unknown Command during Etc	1. Check BC reception full command.1. Operate to initialize BRM(Recovery)2. Reboot the system when same error occurred after initialization.
5Z8HG08	The Number of Nations Set Error When Receive BC DATA WRITE Command (Over 0, 10) during Etc	1. Check the number of supported country.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG09	Nation Code Set Error When Receive BC DATA WRITE Command during Etc	1. Check the supported country code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG10	Detection DB of the Nation is not exist When Receive BC DATA WRITE Command during Etc	1. Check the BC recognition DB of country.2. Download DB again after delecting all recognition DB3. Operate to initialize BRM(Recovery)4. Reboot the system when same error occurred after initialization.
5Z8HG11	No Nation Code When Receive BC READY Command during Etc	1. Check the country setting value.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG12	BC Version Value Set Error When Receive BC DATA WRITE Command (Not BC FPGA) during Etc	1. Check the BC specifications devision and BC FPGA specifications.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initializatio

Problem Code	Problem Description	Troubleshooting
5Z8HG20	Fail to Initialize CIS When Receive BC READY Command during Etc	1. Operate to initialize BRM(Recovery)2. Check CIS part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Z8HG21	Fail to ENCODER POWER ON When Receive BC READY Command during Etc	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Z8HG22	Fail to adjust DD Sensor DAC When Receive BC READY Command during Etc	1. Operate to initialize BRM(Recovery)2. Check whether the sensor is contaminated or not if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Z8HG23	DD Sensor DAC Set Error When Receive BC READY Command during Etc	1. Operate to initialize BRM(Recovery)2. Check DD sensor part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance.
5Z8HG24	ENCODER Mode Set Error When Receive BC READY Command during Etc	1. Operate to initialize BRM(Recovery)2. Check ENCODER part if same error occurs after Initialize.3. Reboot the system when same error occurs even though there is no substance
5Z8HG30	Counterfeit Note List CRC Error When Receive BC SERIAL NO Command during Etc	1. Check the forged notes list CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG31	Not Receive The Number of Counterfeit Note Lists and CRC When Receive BC SERIAL NO Command during Etc	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG32	Over The Number of Counterfeit Note Lists When Receive BC SERIAL NO Command (Over 200) during Etc	1. Check the whole number of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG33	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Nation Code 0) during Etc	1. Check the country code of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG34	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Length Over 2~29) during Etc	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG36	Note Number Detection Mode Set Error When Receive BC MODE Command (Mode Value is Not 0, 1, 2) during Etc	1. Check to the recognized mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HG37	Transaction Classification Set Error When Receive BC MODE Command (Classification Value is Not 0, 1, 2) during Etc	1. Check to the transaction setting.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HG38	Counterfeit Note List Search Classification Set Error When Receive BC SERIAL NO Command 위조지폐 목록 검색 구분 설정 오류 (Classification Value is Not 1, 2, 3 ) during Etc	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG39	Counterfeit Note List Note Number Set Error When Receive BC SERIAL NO Command (Use '*' When Search Note Number Part) during Etc	1. Check the forged notes list's note numbers.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5Z8HG3A	BC MODE SET Bill Management Level Set Error (Over 1~5) during Etc	1. Check check management mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HG3B	Over The Number of BC MODE SET Back Codes (Over 15) during Etc	1. Check the number of check issued by our bank code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HG40	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use End Number at First When Search Note Number Part) during Etc	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG41	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Use Start Number at Last When Search Note Number Part) during Etc	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG42	Counterfeit Note List Search Classification Use Error When Receive BC SERIAL NO Command (Wrong Start/End Number Order When Search Note Number Part) during Etc	1. Check the forged notes list search division.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG43	Counterfeit Note List Length Set Error When Receive BC SERIAL NO Command (Use Wrong Length Value When Search Note Number Part) during Etc	1. Check the length of forged notes list.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG44	Counterfeit Note List Nation Code Set Error When Receive BC SERIAL NO Command (Use Wrong Nation Code When Search Note Number Part) during Etc	1. Check the forged notes list's country-code.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG45	Not Receive The Number of Bill Number Tables and CRC When Receive Check No Write Command during Etc	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG46	Bill Number Error When Receive Check No Write Command during Etc	1. Check the check number when registering check number.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG47	Bill Number Table Length Set Error When Receive Check No Write Command (Length Over 0~50) during Etc	1. Check check number table's length.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG48	Bill Number Table CRC Error When Receive Check No Write Command during Etc	1. Check the number of forged notes list and CRC.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HG49	Over The Number of Bill Number Tables When Receive Check No Write Command (Over 5) during Etc	1. Check check total number of tables.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HH01	Fail to Delete NAND FLASH during Etc	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Z8HH02	NAND FLASH Delete BLOCK Set Error When Download Detection DB during Etc	1. Download DB again after checking recognition DB's delete index.2. Operate to initialize BRM(Recovery)
5Z8HH03	Fail to Download Detection DB during Etc	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Z8HH04	NAND FLASH Download BLOCK Set Error When Download Detection DB during Etc	1. Download DB again after checking recognition DB's index.2. Operate to initialize BRM(Recovery)
5Z8HH05	Detection DB Download File Check Error during Etc	1. Download DB again after checking recognition DB file.2. Operate to initialize BRM(Recovery)
5Z8HH06	Detection DB Download File Size Error during Etc	1. Download DB again after checking recognition DB download file.2. Operate to initialize BRM(Recovery)
5Z8HH07	DB Table Save Error After Download Detection DB during Etc	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Z8HH08	Over Detection DB Download (Over 10) during Etc	1. Download DB again after deleting all recognition DB.2. Operate to initialize BRM(Recovery)
5Z8HH09	Detection DB Header Information Error during Etc	1. Download DB again after deleting recognition DB.2. Operate to initialize BRM(Recovery)
5Z8HH10	EP Download Fail during Etc	1. Re-download BC EP.2. Change the BC B/D if continuous error.
5Z8HH11	EP Download Check Error during Etc	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Z8HH12	EP Download File Size Error during Etc	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Z8HH13	EP Download File ID Error (Not EPAP/EPBT/EPFP) during Etc	1. Download EP again after checking BC EP download file.2. Operate to initialize BRM(Recovery)
5Z8HH14	BC FPGA Download Fail during Etc	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5Z8HH15	Header Information Save Error After BC FPGA Download during Etc	1. Re-download BC FPGA.2. Change the BC B/D if continuous error.
5Z8HH16	Not Provide BC FPGA Download during Etc	1. Check BC FPGA VERSION.2. Change the BC B/D if continuous error.
5Z8HH17	EEPROM READ/WRITE Error during Etc	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5Z8HH18	Receive Unit Serial Number Undefined Option during Etc	1. Re-register and Re-Inquiry Unit Serial number.2. Change the BC B/D if continuous error.
5Z8HH19	Receive USB Undefined Command during Etc	1. Check USB Command from BC and retry the operation.2. Check BC version and Update EP3. Change the BC B/D if continuous error.
5Z8HH20	No BC Process Note When Receive Image Upload Command during Etc	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH21	FC1 Set Error When Receive Image Upload Command during Etc	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH22	BC is Processing Note When Receive Image Upload Command during Etc	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery).3. Reboot the system when same error occurred (message timeout error) after initialization.

Problem Code	Problem Description	Troubleshooting
5Z8HH23	FC2 Set Error When Receive Image Upload Command during Etc	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH24	Not Provide Total Image Upload Function during Etc	1. Check if SP or TM is out of date.2. Initialize the BRM3. If initialization does not fix the problem, contact the technician.
5Z8HH25	Not Provide Note Number Detection Image Upload Function during Etc	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH26	FC2 Set Error When Receive Image Information Upload Command during Etc	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH27	BRM Transaction Mode is Not Same with Image Upload Command Mode during Etc	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH28	BRM Transaction Mode is Not Same with Replenishment/Collect Cash Image Upload Command Mode during Etc	1. Check to the transaction mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH29	No BC Process Note When Receive Replenishment/Collect Cash Image Upload Command during Etc	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH2A	FC1 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Etc	1. Check FC1 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH2B	BC is Processing Note When Receive Replenishment/Collect Cash Image Upload Command during Etc	1. Request image upload after operating BC recognition.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH2C	FC2 Set Error When Receive Replenishment/Collect Cash Image Upload Command during Etc	1. Check FC2 receiving image upload.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH2D	Not Provide Replenishment/Collect Cash Image Upload Function during Etc	1. Check BC image save mode.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HH2E	Note Image Upload Index is Not Same When Receive Replenishment/Collect Cash Image Upload Command during Etc	1. Get BC log and image.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred (message timeout error) after initialization.
5Z8HI01	RecogTask Messeage Timeout Error during Etc	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Z8HI02	ScanTask Messeage Timeout Error during Etc	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Z8HI03	UartTask Messeage Timeout Error during Etc	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.

Problem Code	Problem Description	Troubleshooting
5Z8HI04	BcUsbTask Messeage Timeout Error during Etc	1. Operate to initialize BRM(Recovery)2. Check Command sequence.3. Reboot the system when same error occurred after initialization.
5Z8HJ01	Algorithm Initialize Fail during Etc	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HJ02	Algorithm Ready Fail during Etc	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HJ03	Algorithm Information Set Error during Etc	1. Check BC EP download file.2. Operate to initialize BRM(Recovery)3. Reboot the system when same error occurred after initialization.
5Z8HK01	Table CRC Error When Set Poly-Note Withdrawal Information during Etc	1. Retry the operation
5Z8HK02	CST Note Information Set Number Error When Set Poly-Note Withdrawal Information (n is 0 or over 256) during Etc	1. Check the number of CST Setting notes info
5Z8HK03	Withdrawal Note Number Set Error When Set Poly-Note Withdrawal Information ( n is 0 or over 3000) during Etc	1. Check Withdrawal notes setting
5Z8HK04	Note Information (Not CST Set Note) is Set in Withdrawal Note Information When Set Poly-Note Withdrawal Information during Etc	1. Check Withdrawal notes info
5Z8HS01	FPGA Write Data Error When Initialize Scan Driver during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS02	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS03	Fail to Set CIS Led On Value When Initialize Scan Driver during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS04	Fail to Set Source of Scan Light When Initialize Scan Driver during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS05	Not Process Shading When Initialize Scan Driver during Etc	1. Perform CiS Shading.2. Operate to initialize BRM(Recovery)
5Z8HS08	Fail to Set DAC When Initialize Scan Driver during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS11	FPGA Write Data Error When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS12	Fail to Power On When BC Ready Sensor(MR/UV/DD/Encoder/Entry Sensor) during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS13	Fail to Set CIS Led On Value When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS14	Fail to Set Source of Scan Ligh When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS15	Not Process Shading When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)

Problem Code	Problem Description	Troubleshooting
5Z8HS17	Fail to Set AFE Chip When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS18	Fail to Set DAC When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS19	MR/UV/DD Sampling Start Error When BC Ready during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS1A	Fail to Set 2-Notes DAC When BC Ready during Etc	1. Check whether double notes sensor is contaminate or not.2. Check whether double notes sensor is connected.3. Retry the operation.4. Change the BC if continuous error.
5Z8HS1B	2-Notes to 1-Note Adjust Information Error When BC Ready during Etc	1. Perform calibration info about double notes or one note.2. Operate to initialize BRM(Recovery)
5Z8HS22	Sensor(MR/UV/DD/Encoder/Entry Sensor) Power Off Error When Initialize Scan Driver When Stop BC during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS28	Fail to Set DAC When Stop BC during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS29	MR/UV/DD Sampling Stop Error When Stop BC during Etc	1. Retry the operation.2. Operate to initialize BRM(Recovery)
5Z8HS31	BC Ready Fail When Process CIS Shading – Use in Plant during Etc	1. Perform calibration info about double notes or one note and double notes DAC2. Retry the operation
5Z8HS32	Dark Adjust Fail When Process CIS Shading – Use in Plant during Etc	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Change CIS and Cable5. Change BC
5Z8HS33	Over Target Gap When Process CIS Shading Shading – Use in Plant during Etc	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5Z8HS34	Fail to Write Result Value Flash When Process CIS Shading – Use in Plant during Etc	1. Retry the operation2. Change BC
5Z8HS35	BC Stop Fail When Process CIS Shading – Use in Plant during Etc	1. Retry the operation2. Change BC
5Z8HS36	Over 10Pixel-Excess-Image When Process CIS Shading during Etc	1. Retry the operation2. Check CIS note quility and setting status3. Check CIS Connection Status4. Change BC
5Z8HS37	Dark Shading Result Value is Standard Over When Process CIS Shading during Etc	1. Check CIS Cover Open Status2. Check Outer Light3. Check CIS Connection Status4. Retry the operation5. Change BC
5Z8HS38	Max Overtime Ove When Process CIS Shadingr – Use in Plant during Etc	1. Retry the operation2. Check CIS Substance3. Check CIS note quility and setting status4. Check CIS Connection Status5. Change BC
5Z8HS39	Fail to Set Source of Shading Light When Process CIS Shading – Use in Plant during Etc	1. Retry the operation2. Change BC
5Z8HS41	Fail to Adjust 2-Notes DAC (Less Than MIN) – Use in Plant during Etc	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC
5Z8HS42	Fail to Adjust 2-Notes DAC (Over MAX) – Use in Plant during Etc	1. Check Double notes sensor substance2. Check Double notes sensor connector3. Retry the operation4. Change BC

Problem Code	Problem Description	Troubleshooting
5Z8HS43	2-Notes Adjust Flash Write Fail – Use in Plant during Etc	1. Retry the operation 2. Change BC
5Z8R100	BC response Timeout during Ready process	1. Operate to initialize BRM(Recovery) 2. Reboot the system when same error occurred (message timeout error) after initialization

9510500	BRM unit is NOT in position	1. check if the unit is in position2. check the sensors through VDM when the error persists though the unit is in position
9510A00	The currency of the CST installed differs from the value set in RC slot	Perform Start & End Exchange after installing CST with the same currency as set in the RC slot.
9513300	Failed to Polling and open that communication error	1. check the usb cable2. check the load driver on device manager driver name : nh GBRM or BRM203. In spite of normal if abnormal communication, need to analyze trace log as being get the log.
9513400	The new encryption is activated, operation cannot be performed.	1. Move DIP switch #7 to ON position in RUB board2. Reset the Main board3. Wait during 20 sec4. Restore DIP switch #7 to OFF position RUB5. Reset again
9513500	Disable or disconnect with outer shutter	1. Check the usb/serial cable that is between outer shutter device and CE2. Disable and enable outer shutter driver 3. Restart outer shutter device
9513600	Update BRM VDM Dll File.	Update BRM VDM Dll File.
9513700	Shutter error occurred.	Please check the shutter closed.

Problem Code	Problem Description	Troubleshooting
9530004	In case of send cancel from AP	1. cancel transaction from AP (Check the sequence flow of AP)
9530014	It is occurred hardware error during Transactionex) during the dispense, reject, retract, cash in, cash in end and reset command	1. check the occurred error path or unit.2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530015	Failed to allocate memory during xfs command	1. check the allocated memory from AP and SP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530048	It is occurred to timeout during the xfs command	1. check input timeout value from AP.
9530050	It is unsupport command during xfs command.	1. Unsupport command
9530052	Invalid memory, in case of input cash unit numver 0 and mixnumber is individual when send denominat command.	1. check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530053	Not matched request count and sum of the request count : possibility is zero.	1. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530301	Requested currency is invalid	1. Check requested parameter
9530302	It is occurred cash unit error(e.g) It is impossible to dispense	1. Check the status of cassette, remain count and actual count in physical cash unit.(e.g) check push plate, front guide, pick roller2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530303	Input invalid amount dataThe sum of the values for cash box and cash units was greater than the amount specified.	1. Check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530304	Requested mix number is invalid	1. Check requested parameter
9530306	The amount is not dispensable by the Device	1. Execute Reset if device staus is HW_ERROR2. Check amount in cassette
9530307	Request to over max dispense count	1. Check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530308	Unsupport position	1. Check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530310	1. Safe door open	1. Close safe door
9530312	Failed to open shutter	1. check the shutter2. check the positon for upper unit and outputposion
9530313	The shutter already opened	1. Check the shutter status and shutter2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530314	The shutter already closed	1. Check the shutter status and shutter2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530315	There is not the cashunit	1. Check requested parameter

Problem Code	Problem Description	Troubleshooting
9530316	The output position is empty when present command	1. Check the item left in output position2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530317	This BRM is already in an exchange state	1. Checking the AP flow2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530318	There is no exchange active	1. Checking the AP flow2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530319	Failed to close shutter when close shutter command	1. Check the shutter status and device status2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530323	Items were present at the output positon at the start of the operation, but were removed before the operation was complete when retract command	1. Check the sequence flow for AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530327	The contents of at least one of the defined rows of the mix table incorrect.	1. need to analyze trace log as being got the log
9530329	The retract area specified in RetractArea is not supported.	1. Check the input data from AP
9530330	The retract area specified in RetractArea is not supported.	1. Check the input data from AP
9530334	A mix table is being used to determine the denomination but the amount specified for the denomination is not in the mix table.	1. Check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530335	Items not taken during sub dispense.	1. Check the item left in output position.2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9530336	Items have been left in the transport or exit slot as a result of a prior Dispense, Present or Recycler Cash-In operation.	1. Check the sequence flow for AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
9590600	Abnormal BRM Main B/D Dip switch	Please set BRM main B/D dip switch No.5 to OFF. Please execute RESET command.
9590700	A cassette ID is missing or duplicated. Please check cassette ID.	1. Run NHVDM. 2. Select Set Cassette ID button.3. Check Cassette ID values and set it from A to E.4. Select Initialize button.
9590800	total count and individual count is different during Transaction.	Execute Reset command.
9591000	TE status is Empty but accept count is not zero.	Execute Reset command.
9591200	UTC cassette is not available mode but UTC Cassette is not empty.	Clear notes in UTC cassette.
9591400	Bank Note Info Error has occurred.	1. SP Close2. SP Open
9591700	Device is inoperable because note list types were changed	Execute WFS_INF_CIM_BANKNOTE_TYPES command.
959TY00	Duplicated dip switch information while using cassette type mode (Simple CIT)	1. DIP switch adjustment2. Perform Reset

Problem Code	Problem Description	Troubleshooting
95D0004	In case of send cancel from AP	1. cancel transaction from AP (Check the sequence flow of AP)
95D0014	It is occurred hardware error during Transactionex) during the dispense, reject, retract, cash in, cash in end and reset command	1. check the occurred error path or unit.2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D0015	Failed to allocate memory during xfs command	1. check the allocated memory from AP and SP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D0048	It is occurred to timeout during the xfs command	1. check input timeout value from AP.
95D0050	It is unsupport command during xfs command.	1. Unsupport command
95D0052	Invalid memory, in case of input cash unit numver 0 and mixnumber is individual when send denominat command.	1. check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D0053	Not matched request count and sum of the request count : possibility is zero.	1. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1302	It is occurred cash unit error	1. Check the status of cassette, check push plate, front guide, pick roller2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1307	There were too many items inserted for cash in. The Cash-In stacker is full.	1. Check the sequence flow for AP.2. confirm the max accept count.3. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1308	The position specified is not supported.	1. Check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1310	1. Safe door open	1. Close safe door
95D1312	Failed to open shutter	1. check the shutter2. check the positon for upper unit and outputposion
95D1313	The shutter already opened	1. Check the shutter status and shutter2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1314	The shutter already closed	1. Check the shutter status and shutter2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1315	The cash unit number specified is not valid.	1. Check the input data from AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1316	There were no items to cash in.	1. check whether or not items in the output position.2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1317	The BRM service is in an exchange state.	1. Checking the AP flow cause service is in an exchange state.2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1318	There is no exchange active	1. Checking the AP flow2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.

<b>Problem Code</b>	<b>Problem Description</b>	<b>Troubleshooting</b>
95D1319	Failed to close shutter when close shutter command	1. Check the shutter status and device status2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1323	Items were present at the output position at the start of the operation, but were removed before the operation was complete	1. Checking the AP flow2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1325	A Cash-In transaction is active.	1. Check the sequence flow AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1326	There is no Cash-In transaction active	1. Check the sequence flow AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1328	The output position is not empty so a cash in is not possible.	1. Check the sequence flow AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1335	The retract area specified in RetractArea is not supported.	1. Check the sequence flow AP2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.
95D1339	The hardware requires that the cash unit is empty before allowing changes.	1. Check the status of remaining inside the cassette2. In spite of normal if abnormal performance, need to analyze trace log as being get the log.

## Chapter 4. Card Reader

Problem Code	Problem Description	Troubleshooting
3000000	To shows that received command was undefined	Confirm the firmware version
3000100	To show command parameter error	Confirm the firmware version
3000200	The reception of the command that impossible to implementation	Issue the Reset command.
3000300	To show that the command to the hardware that does not exist was received	Reset device and restart system.
3000400	To show that error data was included in command	Confirm the firmware version
3000500	To show that a command, which requires the card movement, was executed before IC contacts were released from the card	Issue the Reset command.
3000600	To show that ICRW has not obtained the key exchange key. [V04.01.58]	Issue the Reset command.
3001000	To show that the card was not carried to the specific location after specified number of trial for specified time during execution of command of carrying card in various ways	Issue the Reset command.
3001100	To show that status signal for "shutter open" is not received while shutter is open.	Check device and shutter.
3001200	To show that the Sensor is damaged or more than one card is inside ICRW.	Clear sensor and check the sensor.
3001300	To show that the card longer than 92mm is inserted into ICRW	Remove card and reset device
3001400	To show that the card shorter than 78mm is inserted into ICRW	Remove card and reset device
3001500	To show that data in F-ROM is damaged	Restart system and change device to new one.
3001600	To show that the card staying inside ICRW was moved up to the point where status request information change. To show that card was inserted into the ICRW through rear side by external force	Issue the Reset command.
3001700	To show that the card was not carried to the specific location after specified number of Trial for specified time during execution of RETRIEVE command.	Issue the Reset command.
3001800	To show that shutter open/close detection sensor(SW2) and card width check sensor(SW1) are not operating correctly.	Remove card and reset device
3001900	To show that a card was not inserted from the rear, even if 10 seconds had passed after the execution of BACK ENTRY command	Remove card and reset device
3002000	To show that track has parity error	Remove card and reset device
3002100	To show that read error has happened in Multiple magnetic read command.	Remove card and reset device

Problem Code	Problem Description	Troubleshooting
3002200	To show that write error is detected through write/verify procedure.	Remove card and reset device
3002300	To show that only SS,ES,LRC are contained in the track. (no retry)	Please confirm which is problem card or cardreader
3002400	To show that the card has no magnetic track(no retry)	Please confirm which is problem card or cardreader
3002500	To show that quality error (Jitter,Preamble,Postamble) has happened in write verify.	Please confirm which is problem card or cardreader
3002600	To show that the track has no SS.	Please confirm which is problem card or cardreader
3002700	To show that the track has no ES	Please confirm which is problem card or cardreader
3002800	To show that the track has no LRC error	Please confirm which is problem card or cardreader
3002900	To show that the discordance of write data has happened in write verify.	Please confirm which is problem card or cardreader
3003000	To show that power down(or power cut in short instant) is detected(or being detected).	Issue the Reset command.
3003100	To show that DSR signal was turned to OFF (communication is cut)	Check the device cable and connection.
3004000	To show that the card was pulled out from ICRW through entrance gate when CAPTURE command is being executed.	Issue the Reset command.
3004100	Failure at IC Contact solenoid or sensor ICD.	Confirm the solenoid sensor
3004300	Card could not be set to IC contact position/Failure at sensor PDI.	Issue the Reset command.
3004500	ICRW lost sight of the card when ICRW completed to carry the card to the rear position during the card acceptance, and ICRW ejected the card to entrance gate.	Confirm the sensor
3004600	To show that the ejected card has not been withdrawn during execution of Monitoring for removal command.	Remove card and reset device
3004900	Detect that a shimmer(Inner shimmer) is inserted	1. SIU Door Open 2. Check whether the shimmer (attachment) inside the device or card insertion slot 3. Execute Clear status from Anti shimming menu after running VDM
3005000	Retract counter overflow.	Remove card and reset device
3005100	To show that Motor error has happened, through start/stop check in Initialize command.	Confirm the sensor
3005300	To show that read error in Digital Decode Read Command.	Remove card and reset device

Problem Code	Problem Description	Troubleshooting
3005400	Unable to perform ACT operation	1. Open the cover of the device. 2. ACT motor makes loosely. 3. Close the cover and execute reset. 4. If ACT motor does not turn around, change the device.
3005500	Jamed card is locked	Unlock ACT and then take jamed card
3006000	To show that there found abnormal condition on the power-line.	Remove card and reset device
3006100	The receiving error for ATR.	Check to cardreader is running well with IC Chipcard.
3006200	To show that the specified protocol does not agree with that of ICC/SAM ICRW still connected.	Check to cardreader is running well with IC Chipcard.
3006300	In case T=1 cards, after ATR receiving, IFS exchange is failed. ICRW detects time out.	Check to cardreader is running well with IC Chipcard.
3006400	In case T=1 cards, after ATR receiving, IFS exchange is failed. ICRW detects protocol error.	Check to cardreader is running well with IC Chipcard.
3006500	HOST tried to communicate with IC card without card activation.	Check to cardreader is running well with IC Chipcard.
3006600	ICRW tried to activate with ICC/SAM, but the card returned ATR, which is not supported.	Check to cardreader is running well with IC Chipcard.
3006900	ICRW tried to activate with ICC/SAM, but the card returned ATR, Which does not match EMV.	Check to cardreader is running well with IC Chipcard.
3007000	Failure at F-ROM operation.	Reset device and restart system.
3007100	Firmware of User program code area is wrong.	Reset device and restart system.
3009000	The cover of the unit is opened. ( ICT3S5 model only )	Close the unit cover.
3009500	AntiSkimming device is broken down or disconnected.	Turn off the power and check that the antiskimming device was connected normally. if the error is arising from mechanism failure, it is cleared by the repair to the parts.
3009600	Skimming is detected.	Cleared by executing Initialize command after the skimming has been removed
3009900	Abnormal current was found on the internal module.	Turn off te power and check that the internal module was damaged. if the error is arising from electrical failure, it is cleared by the repaire of te parts
300B000	Received the other command before executing Initialize command.	Reset device and restart system.
30R1000	Retain Card Jam	1. Check device outlet, reset Device
3CL1100	Shutter Close Fail	1. Check shutter
3E01000	Eject Card Jam	1. Check device inlet, reset Device
3ER1000	Eject and Retain Card Jam	1. Check device in/outlet, reset Device
3OP1100	Shutter Open Fail	1. Check shutter
3TDtc00	TMD Antiskimmer Device Detected Forign Object	Remove metal or foreign object from bezel

Problem Code	Problem Description	Troubleshooting
3TINTER	TMD Antiskimmer Dll file is missing (UsbHidApi.dll)	Check Dll File
3TTDt00	TMD Antiskimmer Detect Tilt	Restart ATM After Checking bezel
3TVDt00	TMD Antiskimmer Detect Vibration	Restart ATM after Checking bezel
93A7110	Cannot execute command because device status is in h/w error.	Issue the Reset command.
93A9600	A fraud device is detected in front of card reader (Recognize by SIU)	Remove the fraud device in front of cardreader.
93A9700	Card jam error caused by the customer while inserting the card	Remove the card and issue Reset command.
9723010	Fail to connect device.	Check the device cable and connection.
9723016	Fail to receive data.	Check the device cable and connection.
9723017	Send timeout occurred.	Check the device cable and connection.
9723018	Card is jam in enterance	Remove card inside cardreader and issue the reset command
9723019	Sensor polling fail.	Check the device cable and connection.
9723040	Cannot make sensor polling thread.	Restart the ATM system. OS reboot.
9723110	Card is jam in enterance	Remove card inside cardreader and issue the reset command
9723111	Card is jam ( fail to auto recovery )	Remove card inside cardreader and issue the reset command
9723118	Cannot use encryption key because low firmware version	Update firmware to a new version.
9723120	Card is jam in inside cardreader	Remove card inside cardreader and issue the reset command
9723130	In UseReturnUserError = 2, HWERROR is handled when the USERERROR status is maintained for more than the set time (seconds).	1. Perform initialization 2. (If recovery is not possible) After removing the card from the card reader, perform initialization
9723200	Retain bin is full.	Remove card in retain bin.

## Chapter 5. CSM60

Problem Code	Problem Description	Troubleshooting
m109100	ALIGN part is open(unlocked)	1. Remount the Align Cover and execute initialization.
m109200	Cassette Cover is open(unlocked)	1. Remount the cassette Cover and execute initialization.
m109300	Upper path Cover is open(unlocked)	1. Close Upper path Cover and execute initialization
m109400	ESCROW rear path is open(unlocked)	1. Close Escrow rear path and execute initialization
m109600	Bundle path cover is open(unlocked)	1. After Bundle path cover is in place and execute initialization
m109800	Print Ink Assy is open(unlocked)	1. After Print Ink Assy is in place and execute initialization
m109B00	Media remaining at the ESCROW part	"1. Remove the residual media in the device. 2. Execute initialization."
m109D00	Media remaining at the BUNDLE part	"1. Remove the residual media in the device. 2. Execute initialization."
m109E00	Abnormal media detection or Light JAM between sensor	"1. Remove the residual media in the device. 2. Execute initialization."
m109F00	Abnormal media detection (belt path)	"1. Remove the residual media in the device. 2. Execute initialization."
m10A000	Programming error. Invalid command sequence	"1. Execute CSM60 initialization. 2. Reboot the system when the same error occurs after initialization."
m10A100	Programming error. Invalid command sequence	"1. Execute CSM60 initialization. 2. Reboot the system when the same error occurs after initialization."
m10B100	Operation timeout (CSM60)	"1. Remove the residual media in the device. 2. Execute initialization."
m10BF00	[Initialize] Operation timeout(CST or BUNDLE)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C100	Operation timeout (REJECT)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C200	Operation timeout (REJECT)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C300	Operation timeout (ESCROW)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C400	Operation timeout (ESCROW)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C500	Operation timeout (ESCROW)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C600	Operation timeout (ESCROW, BUNDLE)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C700	Operation timeout (ESCROW)	"1. Remove the residual media in the device. 2. Execute initialization."

Problem Code	Problem Description	Troubleshooting
m10C800	Operation timeout (3WAY, PRINT)	"1. Remove the residual media in the device. 2. Execute initialization."
m10C900	Operation timeout (BUNDLE)	"1. Remove the residual media in the device. 2. Execute initialization."
m10CA00	Operation timeout (PRINT)	"1. Remove the residual media in the device. 2. Execute initialization."
m10CB00	Operation timeout (PRINT, ESCROW)	"1. Remove the residual media in the device. 2. Execute initialization."
m10D000	Bunlde modue is not inserted	1. Remount the bunddle and execute initialization.
m10D100	Escrow modue is not inserted	1. Remount the escrow and execute initialization.
m10D200	Bundle Sensor connetor is not connected	1. Remount the bunddle sensor connector and execute initialization.
m10D300	Bundle Actuator connector is not connected	1. Remount the bunddle actuator connector and execute initialization.
m10D400	F5 Fuse is open in main board(Ink Power)	1. Check the F5 Fuse of main board 2. Check the main board when the same error occurs after initialization.
m10D500	F18 Fuse is open in main board(BDM02 24V)	1. Check the F18 Fuse of main board 2. Check the main board when the same error occurs after initialization.
m10D600	F19 Fuse is open in main board(TEM01 24V)	1. Check the F19 Fuse of main board 2. Check the main board when the same error occurs after initialization.
m10D700	F4 Fuse is open in main board(MBM02 24V)	1. Check the F4 Fuse of main board 2. Check the main board when the same error occurs after initialization.
m10D800	F3 Fuse is open in main board(MBM01 24V)	1. Check the F3 Fuse of main board 2. Check the main board when the same error occurs after initialization.
m10FA00	Programming error. Invalid command sepuence	"1. Execute CSM60 initialization. 2. Reboot the system when the same error occurs after initialization."
m10FB00	Programming error. Invalid command sepuence	"1. Execute CSM60 initialization. 2. Reboot the system when the same error occurs after initialization."
m10FC00	Invalid command sequence	"1. Execute CSM60 initialization. 2. Reboot the system when the same error occurs after initialization."
m110100	Operation failure of Cassette (Cassette Near Full)	"1. Remove the residual media in the device. 2. Execute initialization."
m110200	Operation failure of Cassette (Cassette Full)	"1. Remove the residual media in the device. 2. Execute initialization."
m110300	Operation failure of Cassette (Cassette Bottom)	"1. Remove the residual media in the device. 2. Execute initialization."
m110400	Operation failure of Cassette (Retract Box Full)	"1. Remove the residual media in the device. 2. Execute initialization."
m110500	Sensor failure of Cassette (CSS05 & Bottom Both On Fail)	1. Check Sensor CSS05 and CSS03. 2. Execute initialization.
m111000	Operation failure of Cassette (In the Entrance, Remain media, MBS08)	"1. Remove the residual media in the device. 2. Execute initialization."

Problem Code	Problem Description	Troubleshooting
m111100	Operation failure of Cassette (CSS06 is not changed from Light)	"1. Remove the residual media in the device. 2. Execute initialization."
m111200	Operation failure of Cassette (CSS06 is not changed from Dark)	"1. Remove the residual media in the device. 2. Execute initialization."
m111300	Operation failure of Cassette (CSS04 is not changed from Light)	"1. Remove the residual media in the device. 2. Execute initialization."
m111400	Operation failure of Cassette (CSS04 is not changed from Dark)	"1. Remove the residual media in the device. 2. Execute initialization."
m111500	Operation failure of Cassette (CSS05 is not changed from Light)	"1. Remove the residual media in the device. 2. Execute initialization."
m111600	Operation failure of Cassette (Media is not moved properly, MBS08)	"1. Remove the residual media in the device. 2. Execute initialization."
m111700	Operation failure of Cassette (Media is not moved properly, MBS08)	"1. Remove the residual media in the device. 2. Execute initialization."
m111800	Operation failure of Cassette (Media is not moved properly, MBS07)	"1. Remove the residual media in the device. 2. Execute initialization."
m111900	Operation failure of Cassette (CSS05 is already On Fail)	1. Check Sensor CSS05. 2. Check the main board when the same error occurs after initialization.
m111A00	Operation failure of Cassette (Bottom is not On Fail)	1. Check Sensor CSS03. 2. Check the main board when the same error occurs after initialization.
m111B00	Operation Timeout of Cassette (push plate Down not Finished)	1. Check Sensor CSS06. 2. Check the main board when the same error occurs after initialization.
m111E00	Operation failure of Cassette (CSM01 Motor Off Fail)	1. Check CSM01 Motor and Connector 2. Check the main board when the same error occurs after initialization.
m111F00	Operation failure of Cassette (CSM02 Motor Off Fail)	1. Check CSM02 Motor and Connector 2. Check the main board when the same error occurs after initialization.
m112F00	Operation failure of Cassette (eprom write Fail)	1. Check the main board when the same error occurs after initialization.
m113000	Operation failure of Cassette (RTM01 Solenoid On Fail)	1. Check RTM01 Solenoid and Connector 2. Check the main board when the same error occurs after initialization.
m113100	[Initialize] Fail to control CST/RT gate solenoid. did not change to RT path (MBS22 Dark Fail)	"1. Remove jammed in CST/RT gate.2. Replace solenoid."
m113200	[Initialize] Fail to control CST/RT gate solenoid. did not change to CST path (MBS22 Light Fail)	"1. Remove jammed in CST/RT gate.2. Replace solenoid."
m120200	Operation failure of 3Way-Gate (MBS03 and MBS04 are not changed)	"1. Remove the residual media in the device. 2. Execute initialization."
m120300	Operation failure of 3Way-Gate (MBS03 is not changed to light from dark)	"1. Remove the residual media in the device. 2. Execute initialization."
m120400	Operation failure of 3Way-Gate (MBS03 is not changed to dark from light)	"1. Remove the residual media in the device. 2. Execute initialization."
m120500	Operation failure of 3Way-Gate (MBS03 is not changed to dark from light)	"1. Remove the residual media in the device. 2. Execute initialization."

Problem Code	Problem Description	Troubleshooting
m120600	Operation failure of 3Way-Gate (MBS04 is not changed to dark from light)	"1. Remove the residual media in the device. 2. Execute initialization."
m120700	Abnormal sensor information	"1. Remove the residual media in the device. 2. Execute initialization."
m120800	Programming error. Invalid command sequence	"1. Execute CSM60 initialization. 2. Reboot the system when the same error occurs after initialization."
m130100	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m130200	Double detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m130B00	No media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m130C00	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m130E00	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m130F00	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m131000	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m131100	Operation failure of Bundle (Shutter is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m131200	Shutter Open sensor and Closes Sensor are detected same time.	1. Check Shutter sensor part and execute initialization
m131300	Operation failure of Bundle (Bundle feeder is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m131400	Operation failure of Bundle (Bundle feeder is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m131500	Operation failure of Bundle (Bundle feeder is not moved properly)	1. Close Bundle roller part and execute initialization
m131700	Short media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m131800	Long media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m131900	Double detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m131A00	skew media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m131B00	Operation failure of Bundle (Media is not separated properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m131D00	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."

Problem Code	Problem Description	Troubleshooting
m131E00	No media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m131F00	Operation failure of Bundle	"1. Remove the residual media in Bundle.2. Execute initialization."
m132000	No media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m132100	Narrow media detection	"1. Remove the residual media in Bundle.2. Execute initialization."
m132200	Home position failure of Stack Sheet	"1. Remove the residual media in the device. 2. Execute initialization."
m132300	Operation failure of Bundle (Bundle feeder is not moved properly)	"1. Remove the residual media in the device. 2. Execute initialization."
m132400	Operation failure of Bundle (Bundle feeder is not moved properly)	"1. Remove the residual media in the device. 2. Execute initialization."
m133000	Operation failure of Bundle (Media is not moved properly)	"1. Remove the residual media in Bundle.2. Execute initialization."
m134100	Operation failure of Bundle (Media is not moved properly, BDS01)	"1. Remove the media in Bundle and check the sensor(BDS01).2. Do the Initialize."
m134200	Operation failure of Bundle (Media is not moved properly, BDS02)	"1. Remove the media in Bundle and check the sensor(BDS02).3. Do the Initialize."

mVUS300	length data invalid in bulk data	Check SP protocol

## Chapter 6. Encryption PIN Pad

Problem Code	Problem Description	Troubleshooting
1101	Firmware file length is wrong	Re-update with correct firmware
1102	Firmware size is wrong	Re-update with correct firmware
2A01	Incorrect key usage	Check if the key usage setting
2B01	Incorrect key name	Check if key name is correct
3E5301	SHA1 signature of the EPP serial number is not exist	Replace with another EPP that SHA1 signature of the EPP serial number is injected
3E5501	SHA1 signature of the EPP public key is not exist	Replace with another EPP that SHA1 signature of the EPP public key is injected
4I00	All key value is zero.	It needs to load not zero value key.
4J00	Not AES PIN key in PIN block en/decryption	En/decrypt data with AES key
4J01	Not TDES PIN key in PIN block en/decryption	En/decrypt data with TDES key
4Y01	It is not TR31 mode.	It needs to do NVRAM CLEAR(dip switch #1 on and off)
4Z01	Incorrect mode of use of working key	Inject correct TR31 working key value
7001	1st password is not verified.	It needs to enter 1st password again.
7101	1st password is not verified.	It needs to enter 1st password again.
7102	default pasword entry	It needs to enter not default password.
7103	password comparison failure	It needs to enter password again
7104	undefined command parameter	check if SP command message is correct.
9701010	Failed to open port (open connection failure)	Check the device cable and connection.
9701012	Failed to send data to device	Check the device cable and connection.
9701016	Cannot receive data. timeout occurred	Check the device cable and connection.
9701017	Response data timed out	Check the device cable and connection.
9701040	Failed to create thread (open connection failure)	Restart the PIN pad Service Provider
9701111	BCC error occurred	Restart ATM
9701190	Cannot execute command. ( If the command is GetPin, please check the number of transactions is over than 120 in an hour. )	Please wait an hour and check transaction.
9701199	Change device to new one	Change device to new one
97011E 0	Failed to download firmware (no firmware file)	Restart ATM
97011E 1	Failed to download firmware (execution failure)	Restart ATM
9E11200	Cannot connect to device	Check the device cable and connection.
9E11200	Cannot connect to device	Check the device cable and connection.

Problem Code	Problem Description	Troubleshooting
9E13100	Cannot receive data. timeout occurred	Check the device cable and connection.
9E13100	Cannot receive data. timeout occurred	Check the device cable and connection.
9E13200	Cannot send data to device	Check the device cable and connection.
9E13200	Cannot send data to device	Check the device cable and connection.
9E41A00	Cannot make thread	Restart ATM
9E41A00	Cannot make thread	Restart ATM
9EA6100	Self test fail	Change device to new one
9EA6100	Self test fail	Change device to new one
9EA6200	Cannot download firmware	confirm the firmware file
9EA6200	Cannot download firmware	confirm the firmware file
9EA6300	Firmware download failed.	Change device to new one
9EA6300	Firmware download failed.	Change device to new one
9EA6400	BCC error occurred	Restart ATM
9EA6400	BCC error occurred	Restart ATM
9EA9100	PINPAD device is out of order	Check serial number of pinpad
9EA9100	PINPAD device is out of order	Check serial number of pinpad
9EA9200	PINPAD device is out of order	Check all buttons on keypad
9EA9300	PINPAD device do not support Secure Communication	PINPAD device do not support Secure Communication
9EA9300	PINPAD device do not support Secure Communication	PINPAD device do not support Secure Communication
A500	PIN entry less than 4 digit	It needs to enter from 4 to 12 PIN digits
A600	PIN entry more than 12	It needs to enter from 4 to 12 PIN digits
B100	Undefined baudrate	only 38400 bps is possible
E12A500	Undefined Baudrate	Check baudrate parameter
E12A500	Invalid baudrate	Check if the baudrate is either 38400 or 115200
E131100	Invalid parameter length	Check if the parameter length is normal
E131100	Received message length error	Check SP message
E131200	Invalid parameter	Check SP message
E131400	Default sensitive password entry	Enter new sensitive passwords
E137400	Not in sensitive mode	Enter sensitive passwords
E141200	Invalid parameter	Check SP message
E147600	Invalid function key parameter	Check SP message

Problem Code	Problem Description	Troubleshooting
E147600	Invalid the sum of function key value	Check if the sum of function key value is 0x4b
E147700	Invalid the function key value	Check if the function key value is between 0x0a and 0x0f
E147700	Invalid function key parameter	Check SP message
E15A400	RTC setting failure	Check SP message
E15A400	Invalid time value	Check if the time value is ASC value
E211200	Invalid parameter	Check SP message
E211300	PIN or Key entry timeout	Retry PIN or Key entry from the beginning
E211400	Default sensitive password entry	Enter new sensitive passwords
E217400	It is not in the sensitive mode	Enter two sensitive passwords to be sensitive mode
E217400	Not in sensitive mode	Enter sensitive passwords
E217800	PIN transaction exceeded 120 within one hour	Retry PIN transaction after one hour
E217800	120 PIN entry excess within 1 hour	Wait until it reaches one hour
E21FB00	Undefined EPP state	Check EPP module
E21FF02	Factory State	NVRAM clear and EPP installation
E21FF03	Initialization State	EPP installation
E21FF04	Authorized Removal State	EPP installation
E21FF05	Unauthorized Removal State	EPP installation
E221200	Invalid parameter	Check SP message
E221300	Password entry timeout	Retry password entry from the beginning
E227000	Incorrect password	Enter correct passwords
E231200	Invalid parameter	Check SP message
E231300	PIN or Key entry timeout	Retry PIN or Key entry from the beginning
E231300	Entry timeout	Entry retry
E237000	Sensitive password verification failure	Check sensitive passwords
E237100	Changed sensitive password verification failure	Check changed sensitive passwords
E23FD03	Not default ID and password	Enter default or NVRAM clear
E23FD04	1st and 2nd password are same	1st and 2nd passwords must be different
E23FD05	1st password is not verified	Enter correct 1st password
E23FD06	Password comparison failure	Check existing passwords
E23FD07	ID comparison failure	Check ID
E23FD08	ID is NULL value	Register non NULL ID
E23FD09	Password is NULL value	Register non NULL password

Problem Code	Problem Description	Troubleshooting
E23FD0A	Same ID exists	Register different ID
E23FD0D	ID count FULL or EPP is not in installaion state	Delete unused ID or NVRAM clear
E23FD10	Not in removal sensitive mode	Enter removal sensitive id and password
E23FD13	Not default ID and password	Enter default or NVRAM clear
E23FF0F	ID not found	Check existing ID
E247400	It is not in the sensitive mode	Enter two sensitive passwords to be sensitive mode
E312300	Key is not found	Check if the key is loaded
E312300	Key not found	Load key to be needed
E322300	Key is not found	Check if the key is loaded
E322300	Key not found	Load key to be needed
E324G00	TMK not found	Load TMK to be needed
E331200	Invalid parameter	Check SP message
E331200	Invalid parameter	Check if the parameter is normal
E332300	Key not found	Load key to be needed
E332300	Key is not found	Check if the key is loaded
E341200	Invalid parameter	Check if the parameter is normal
E341200	Invalid parameter	Check SP message
E342300	Key is not found	Check if the key is loaded
E342300	Key not found	Load key to be needed
E352300	Key is not found	Check if the key is loaded
E352300	Key not found	Load key to be needed
E362300	Key is not found	Check if the key is loaded
E362300	Key not found	Load key to be needed
E371200	Invalid parameter	Check SP message
E372300	Key is not found	Check if the key is loaded
E372300	Key not found	Load key to be needed
E382300	Key not found	Load key to be needed
E382300	Key is not found	Check if the key is loaded
E391200	Invalid parameter	Check SP message
E392300	Key is not found	Check if the key is loaded
E392300	Key not found	Load key to be needed
E3A1200	Invalid parameter	Check SP message

Problem Code	Problem Description	Troubleshooting
E3A2300	Key is not found	Check if the key is loaded
E3A2300	Key not found	Load key to be needed
E3BA101	DUKPT Key not found	Inject DUKPT key
E3C2300	Key is not found	Check if the key is loaded
E3C2300	Key not found	Load key to be needed
E412300	Key is not found	Check if the key is loaded
E412300	Key not found	Load key to be needed
E412A00	Key usage mismatch	Check the key usage
E412A00	Mismatch key usage	Check key usage
E412C00	Failure of obtaining the key in the keytable	Check if the parent key is loaded status
E413700	Multiple key usage	only one key usage is needed
E41A200	IBM3624(Local) PIN verification failure	Check PIN verification data
E41A200	Local PIN verification failure	Check the data for local PIN verification
E41A300	No entered PIN	No entered PIN
E41A300	No PIN is entered	Try again after entering PIN
E611100	Invalid parameter length	Check if the parameter length is normal
E612A00	Key usage mismatch	Check the key usage
E615000	Undefined RSA Key Type	Check the firmware code
E615800	The keyname is same with existing symmetric keyname	Set the different keyname with existing symmetric keyname
E616300	Invalid RSA Key format	Check the RSA Key format
E??1000	Undefined Command	Check command message
EA17400	It is not in the sensitive mode	Enter two sensitive passwords to be sensitive mode
EC04A00	PIN key and DATA key cannot be loaded from the same master key(or KEK).	Different master key(or KEK) should be injected for PIN key and Data Key respectively.
EC11200	Key not found	Load key to be needed
EC11200	Invalid parameter	Check if the parameter is normal
EC12000	Key table is full	Delete unused key or NVRAM clear
EC12000	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
EC12100	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
EC12200	The key usage is not Key Encryption Key	Set the key which of usage is Key Encryption Key
EC12300	Key is not found	Check if the key is loaded

Problem Code	Problem Description	Troubleshooting
EC12700	The key usage is	Set the correct key usage
EC12800	Key is not loaded state	Load key completely
EC12800	The parent key is not loaded status	Check if the key is loaded status
EC12900	The parent key mismatch	Set the same parent key
EC12A00	Key usage mismatch	Check the key usage
EC12B00	Invalid keyname	Check keyname
EC12D00	The child key length error	The child key length should be equal or less than the parent key length
EC12D00	Invalid key length	Check the key length. it should be 8 or 16.
EC12E00	Single length key level error	Single length key level should be 2
EC12F00	The parent key usage is not Key Encryption Key	Set the parent key which of usage is Key Encryption Key
EC12F00	Parent key is not KEK	Check parent key usage
EC13000	Double length key level error	Double length key level should be 2 or 3
EC13100	The key is not KEK for PIN Key	Set the key which of usage is KEK for PIN Key
EC13200	The key is not KEK for Data Key	Set the key which of usage is KEK for Data Key
EC13300	The key is not KEK for MAC Key	Set the key which of usage is KEK for MAC Key
EC13400	The key is not KEK for Unique PIN Key	Set the key which of usage is KEK for Unique PIN Key
EC13500	The key is not KEK for Local PIN Key	Set the key which of usage is KEK for Local PIN Key
EC13600	Transaction key usage is KEK	Set the transaction key which of usage is not KEK
EC13700	Transaction key is multiple usage	Set the transaction key which has single usage
EC13700	Multiple key usage	only one key usage is needed
EC13800	The left key is same with the right key	Set the different key value
EC13900	Weak Key	Check key value
EC13900	The left key is weak key	Set the left key which is not weak key
EC13A00	The right key is weak key	Set the right key which is not weak key
EC13A00	Weak Key	Check key value
EC13D00	Failure of obtaining the parent key	Check if the parent key is loaded status
EC13E00	The child key counts exceed 5	Delete an existing key and try it again or set the existing child keyname
EC13F00	The key is not duplicated usage	The key cannot be overwritten because of no duplicate usage
EC13F00	Non duplicated key	Check key usage
EC14100	The same key value exists	Set the different key value with the existing key
EC14800	It is in the ANSI TR31 mode	ANSI TR31 Import Key Command should be used.

Problem Code	Problem Description	Troubleshooting
EC14A00	PIN key and DATA key cannot be loaded from the same master key(or KEK).	Different master key(or KEK) should be injected for PIN key and Data Key respectively.
EC14B00	PIN key and DATA key cannot be loaded from the same master key(or KEK).	Different master key(or KEK) should be injected for PIN key and Data Key respectively.
EC14D00	Weak Key	Check key value
EC14Y00	TR31 mode	Load TR31 working key or NVRAM clear
EC16200	Same with RSA keyname	Use different keyname from RSA Key
EC16200	The keyname is same with existing asymmetric keyname	Set the different keyname with existing asymmetric keyname
EC22000	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
EC22300	Key is not found	Check if the key is loaded
EC22800	The parent key is not loaded status	Check if the key is loaded status
EC22B00	Invalid keyname	Check the keyname is normal string and less than 32 digits
EC22C00	Failure of obtaining the key in the keytable	Check if the parent key is loaded status
EC22D00	The child key length error	The child key length should be equal or less than the parent key length
EC22F00	The parent key usage is not Key Encryption Key	Set the parent key which of usage is Key Encryption Key
EC23000	Double length key level error	Double length key level should be 2 or 3
EC23100	The key is not KEK for PIN Key	Set the key which of usage is KEK for PIN Key
EC23200	The key is not KEK for Data Key	Set the key which of usage is KEK for Data Key
EC23300	The key is not KEK for MAC Key	Set the key which of usage is KEK for MAC Key
EC23400	The key is not KEK for Unique PIN Key	Set the key which of usage is KEK for Unique PIN Key
EC23500	The key is not KEK for Local PIN Key	Set the key which of usage is KEK for Local PIN Key
EC23600	Transaction key usage is KEK	Set the transaction key which of usage is not KEK
EC23700	Transaction key is multiple usage	Set the transaction key which has single usage
EC23800	The left key is same with the right key	Set the different key value
EC23900	The left key is weak key	Set the left key which is not weak key
EC23A00	The right key is weak key	Set the right key which is not weak key
EC23D00	Failure of obtaining the parent key	Check if the parent key is loaded status
EC23E00	The child key counts exceed 5	Delete an existing key and try it again or set the existing child keyname
EC24100	The same key value exists	Set the different key value with the existing key
EC24200	Key Block length error	Check Key Block length
EC24300	Key Block Header error	Check Key Block Header

Problem Code	Problem Description	Troubleshooting
EC24400	The parent key is not TR31 Master Key	Set the parent key which of usage is TR31 Master Key
EC24500	Failure of decrypting Key Block	Check if the Key Block is correct
EC24700	Key Block verification failure	Check MAC for Key Block
EC26200	The keyname is same with existing asymmetric keyname	Set the different keyname with existing asymmetric keyname
ED11100	Invalid parameter length	Check if the parameter length is normal
ED11100	Received message length error	Check SP message
ED11200	Invalid parameter	Check if the parameter is normal
ED11200	Invalid parameter	Check SP message
ED12300	Key is not found	Check if the key is loaded
ED12300	Key not found	Load key to be needed
ED12800	Key is not loaded state	Load key completely
ED12A00	Key usage mismatch	Check the key usage
ED12A00	Mismatch key usage	Check key usage
ED12C00	Failure of obtaining the key in the keytable	Check if the parent key is loaded status
ED12D00	Invalid key length	Check the key length. it should be 8 or 16.
ED13700	Multiple key usage	only one key usage is needed
ED1A000	Undefined AES length	Set AES length 16, 24 or 32
ED1A000	Undefined AES mode	Check AES mode parameter
ED21100	Received message length error	Check SP message
ED21100	Invalid parameter length	Check if the parameter length is normal
ED21200	Invalid parameter	Check if the parameter is normal
ED21200	Invalid parameter	Check SP message
ED22300	Key not found	Load key to be needed
ED22300	Key is not found	Check if the key is loaded
ED22800	Key is not loaded state	Load key completely
ED22A00	Mismatch key usage	Check key usage
ED22A00	Key usage mismatch	Check the key usage
ED22C00	Failure of obtaining the key in the keytable	Check if the parent key is loaded status
ED22D00	Invalid key length	Check the key length. it should be 8 or 16.
ED23700	Multiple key usage	only one key usage is needed
ED2A000	Undefined AES mode	Check AES mode parameter
ED2A000	Undefined AES length	Set AES length 16, 24 or 32

Problem Code	Problem Description	Troubleshooting
EF11100	Invalid parameter length	Check if the parameter length is normal
EF11100	Received message length error	Check SP message

ER42A00	Mismatch key usage	Check key usage
ER42B00	Invalid keyname	Check keyname
ER45000	Undefined RSA key type	Check RSA key type
ER45000	Undefined RSA Key Type	Check the firmware code
ER45600	There is no CA public key	Inject CA public key
ER45700	Failure of signature verification	Check RSA Key format and signature value
ER45700	Signature verification failure	Check RSA key and data
ER45800	The keyname is same with existing symmetric keyname	Set the different keyname with existing symmetric keyname
ER45800	Same with symmetric key name	Use different keyname from symmetric key
ER46300	Invalid RSA Key format	Check the RSA Key format
ER46400	RSA keys are not loaded all	Return to the factory and load RSA keys
ER46500	no unbinding	need unbinding
ER46600	Root and Host public keys are loaded	Unbinding procedure is needed or NVRAM clear
ER46700	Only Host public key is loaded	Unbinding procedure is needed or NVRAM clear
ER46800	Root and Host public key not found	Load Root or Host public key
ER46900	Modulus getting failure	Check RSA key
ER46A00	Root and Host public key name is same	Use different keyname for Root and Host public key
ER46B00	Not Host public key type	Check Host public key name and type
ER46C00	Not Root public key type	Check Root public key name and type
ER46D00	no host root key	need to load host root key with correct information
ER51200	Invalid parameter	Check SP message
ER55900	Mutual authentication is not verified	Try to load Host public key command
ER55A00	RKT 15 minutes timeout	Execute RKT process from the beginning
ER55B00	Random number size is over 256	Maximum Random number size must be 256

Problem Code	Problem Description	Troubleshooting
ER55B00	Random number size exceeds 256	Set the random number size less than 256
ER56400	RSA keys are not loaded all	Return to the factory and load RSA keys
ER65900	Mutual authentication is not verified	Try to load Host public key command and start key exchange command
ER65A00	RKT 15 minutes timeout	Execute RKT process from the beginning
ER65B00	Random number size exceeds 256	Set the random number size 16
ER65C00	There is no Host public key	Try to load Host public key command
ER65D00	RSA encryption failure	Check RSA Key format
ER75900	Mutual authentication is not verified	Try to load Host public key command and start key exchange command
ER75A00	RKT 15 minutes timeout	Execute RKT process from the beginning
ER75B00	Random number size exceeds 256	Set the random number size less than 256
ER75E00	There is no EPP private key	Inject EPP private key
ER75F00	RSA decryption failure	Check RSA Key format
ER76000	Invalid Encoded Message format	Check the encrypted message
ER76100	Failure of random number comparison	Check the random number
ER81100	Received message length error	Check SP message
ER81200	Invalid parameter	Check SP message
ER81200	Invalid parameter	Check if the parameter is normal
ER82000	Key table is full	Delete unused key or NVRAM clear
ER82000	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
ER82100	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
ER82200	Not TMK usage	Check TMK usage
ER82700	The key usage is	Set the correct key usage
ER82A00	Key usage mismatch	Check the key usage
ER82B00	Invalid keyname	Check keyname
ER82D00	Invalid key length	Check the key length. it should be 8 or 16.
ER83800	The left key is same with the right key	Set the different key value
ER83900	Weak Key	Check key value
ER83900	The left key is weak key	Set the left key which is not weak key
ER83A00	The right key is weak key	Set the right key which is not weak key
ER83A00	Weak Key	Check key value

Problem Code	Problem Description	Troubleshooting
ER84100	Same key value with another TMK	TMK key value must be different from another TMK
ER84400	The parent key is not TR31 Master Key	Set the parent key which of usage is TR31 Master Key
ER84D00	Weak Key	Check key value
ER85700	Signature verification failure	Check RSA key and data
ER85700	Failure of signature verification	Check RSA Key format and signature value
ER85900	Mutual authentication is not verified	Try to load Host public key command and start key exchange command
ER85A00	RKT 15 minutes timeout	Execute RKT process from the beginning
ER85F00	RSA decryption failure	Check RSA Key format
ER85F00	RSA decryption failure	Check RSA key and data
ER86000	Invalid Encoded Message format	Check the encrypted message
ER86100	Random number comparison failure	Check random number
ER86100	Failure of random number comparison	Check the random number
ER86200	The keyname is same with existing asymmetric keyname	Set the different keyname with existing asymmetric keyname
ER86200	Same with RSA keyname	Use different keyname from RSA Key
ER86400	RSA keys are not loaded all	Return to the factory and load RSA keys
ER86800	Root and Host public key not found	Load Root or Host public key
ER86900	Modulus getting failure	Check RSA key
ET11100	Received message length error	Check SP message
ET11100	Invalid parameter length	Check if the parameter length is normal
ET11200	Invalid parameter	Check if the parameter is normal
ET11200	Invalid parameter	Check SP message
ET11400	Default sensitive password entry	Enter new sensitive passwords
ET12000	Key table is full	Delete unused key or NVRAM clear
ET12000	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
ET12100	Key Table is FULL	Delete an existing key and try it again or set the existing keyname
ET12200	Not TMK usage	Check TMK usage
ET12200	The key usage is not Key Encryption Key	Set the key which of usage is Key Encryption Key
ET12400	Plain text TMK load	Plain text key cannot be loaded
ET12400	WFS_PIN_USECONSTRUCT key usage cannot be used as TMK	Remove WFS_PIN_USECONSTRUCT key usage
ET12500	No component key entered	Enter component key

Problem Code	Problem Description	Troubleshooting
ET12500	There is no entered component key	Enter component key and try it again
ET12600	Component entry is not complete	Enter component key completely
ET12600	Component key entry is not complete	Enter component key all
ET12700	The key usage is	Set the correct key usage
ET12700	NULL key usage	Check key usage
ET12B00	Invalid keyname	Check keyname
ET13700	Multiple key usage	only one key usage is needed
ET13800	The left key is same with the right key	Set the different key value
ET13900	The left key is weak key	Set the left key which is not weak key
ET13900	Weak Key	Check key value
ET13A00	Weak Key	Check key value
ET13A00	The right key is weak key	Set the right key which is not weak key
ET13B00	Component key count is less than 2	Minimum component key is 2
ET13B00	Component key counts are less than 2	Enter more than two component keys
ET13C00	Not on entering component key	Enter component key
ET13C00	key is imported without the component key entry	Enter more than two component keys
ET14000	The key is not top level	Set the top level key
ET14100	Same key value with another TMK	TMK key value must be different from another TMK
ET14400	The parent key is not TR31 Master Key	Set the parent key which of usage is TR31 Master Key
ET14C00	Invalid component key digit	Check the compoent key digit. it should be 16 or 32.
ET14D00	Weak Key	Check key value
ET14F00	Not authenticated zeroization	Authenticated zeroization
ET14H00	The working key name is same with DUKPT key name.	Set the different keyname between working key and DUKPT key.
ET16200	The keyname is same with existing asymmetric keyname	Set the different keyname with existing asymmetric keyname
ET16200	Same with RSA keyname	Use different keyname from RSA Key
ET17400	Not in sensitive mode	Enter sensitive passwords
ET17400	It is not in the sensitive mode	Enter two sensitive passwords to be sensitive mode
ET1A100	maximum PIN encryption count of DUKPT	Inject new DUKPT key
ET1A103	DUKPT Key Table Full	Delete an existing DUKPT key and inject DUKPT key
ET1A104	Not DUKPT key usage	Check key usage value
EU11100	Received message length error	Check SP message

Problem Code	Problem Description	Troubleshooting
EU18200	Firmware update public key does not exist	Inject firmware update public key
EU21100	Received message length error	Check SP message
EU21100	Invalid parameter length	Check if the parameter length is normal
EU21200	Invalid parameter	Check SP message
EU21200	Invalid parameter	Check if the parameter is normal
EU28000	Firmware update start command does not executed	Execute firmware update start commnad
EU28000	Not on updating firmware	Start firmware update at the first time
EU28300	Received firmware file does not have version info	Check firmware file
EU28300	Not Version code	Check firmware file
EU31200	Invalid parameter	Check if the parameter is normal
EU35700	Failure of signature verification	Check RSA Key format and signature value
EU35700	Signature verification failure	Check RSA key and data
EU38000	Firmware update start command does not executed	Execute firmware update start commnad
EU38000	Not on updating firmware	Start firmware update at the first time
EU38100	Check sum failure	Check firmware file
EV2FB00	Undefined EPP state	Check EPP module
EV2FB00	Undefined State	Check firmware source code
EW11200	Invalid parameter	Check SP message
EW11300	ID and password entry timeout	Retry ID and password entry from the beginning
EW1FD02	Incorrect IDs or passwords	Enter correct IDs and passwords
EW1FD03	Incorrect default IDs or passwords	Enter correct default IDs and passwords
EW1FD04	The two IDs are same	Set the different two IDs
EW1FD05	1ST ID is not verified	Verify 1ST ID first
EW1FD13	Not default ID and password	Enter default or NVRAM clear
EW21200	Invalid parameter	Check if the parameter is normal
EW21200	Invalid parameter	Check SP message
EW21300	ID and password entry timeout	Retry ID and password entry from the beginning
EW2FD06	Failure of entered password verification	Enter correct password
EW2FD07	Failure of entered ID verification	Enter correct ID
EW2FD08	ID is	Enter a ID that is not
EW2FD09	Password is	Enter a password that is not
EW2FD0A	Same ID exists	Enter a different ID with existing ID

Problem Code	Problem Description	Troubleshooting
EW2FD0C	Incorrect ID	Enter correct ID
EW2FD0D	Full ID counts (20)	Delete an existing ID and try it again
EW2FD0E	ID is NULL value	Register non NULL ID
EW2FD0E	Entered ID is	Enter ID that is not
EW2FD10	It is not sensitive mode for removal detection	Enter two IDs and passwords to be sensitive mode for removal detection
EW2FD10	Not in removal sensitive mode	Enter removal sensitive id and password
EW2FF0F	ID is not found	Set existing ID
EW3FA00	Undefined action	Check firmware source code
EW3FA00	Undefined EPP state	Check EPP module
EW3FD01	The count of ID/password that are not default is less than two	Enter more than two IDs and passwords that are not default
EW3FD01	Not two ID	Register at least 2 ID
EW3FD0E	Entered ID is	Enter ID that is not
EW3FD0E	ID is NULL value	Register non NULL ID
EW3FD10	Not in removal sensitive mode	Enter removal sensitive id and password
EW3FD10	It is not sensitive mode for removal detection	Enter two IDs and passwords to be sensitive mode for removal detection
EW3FD12	The two removal switches of EPP are not pressed correctly.	Check if two removal switches of EPP are pressed correctly.
EW3FD12	The two removal switches of EPP are not pressed correctly.	Check if two removal switches of EPP are pressed correctly.
EW4FA00	Undefined EPP state	Check EPP module
EW4FA00	Undefined action	Check firmware source code
EW4FD01	The count of ID/password that are not default is less than two	Enter more than two IDs and passwords that are not default
EW4FD01	Not two ID	Register at least 2 ID
EW4FD0E	ID is NULL value	Register non NULL ID
EW4FD0E	Entered ID is	Enter ID that is not
EW4FD10	It is not sensitive mode for removal detection	Enter two IDs and passwords to be sensitive mode for removal detection
EW4FD10	Not in removal sensitive mode	Enter removal sensitive id and password
EW5FD0F	Search ID count error	Check firmware source code
EW5FD10	It is not sensitive mode for removal detection	Enter two IDs and passwords to be sensitive mode for removal detection
EW5FF0F	ID is not found	Set existing ID

Problem Code	Problem Description	Troubleshooting
EW5FF0F	ID not found	Check existing ID
EX1FF01	Self Test Fail	Exchange EPP
EX1FF02	Initial State	Set Initialization State and Set installation state
EX1FF03	Initialization State	Set installation state
EX1FF04	Authorized Removal State	Set installation state
EX1FF05	Unauthorized Removal State	Set Initial State, Set Initialization State and Set installation state
EXX1000	Undefined main command	Check main command code
EXX1500	Glue attack is detected	Check EPP Key state
Ep00400	Encryption fails	Check SP/EP Communication
Ep00400	Encryption fails.	Check SP/EP Communication
Ep00500	EP Crypto Open fails	Check SP/EP Communication
Ep00600	Mac address comparison fails	Check Command Message
Ep00800	EP Crypto Done fails	Check command message
Ep00900	Not in auth init state	Authentication process needs between SP and EP
Ep01100	The received Mac address from SP	Check command message
Ep01200	The received serial number from SP	Check command message
FD14	Same removal detection ID entry	It needs to enter different removal detection ID
FD15	2nd ID is not NULL	It needs to do NVRAM CLEAR(Dip switch #1 on and off)
FD16	2nd ID is not NULL	It needs to do NVRAM CLEAR(dip switch #1 on and off)
FFF1	120 PIN entry excess within 1 hour	Wait until it reaches one hour
FFF3	Fail to inject TR34 RKL Key	Reboot EPP
Fpp001	Not auth success state	Authentication process needs between SP and EP
Fpp002	The stored Mac address of EPP is	Authentication process needs between SP and EP
Fpp003	Random number comparison fails	Authentication process needs between SP and EP
Fpp004	Encryption fails	Check command message
Fpp010	The stored serial number of EPP is	Authentication process needs between SP and EP
P5AF01	continuous same PIN (only for BRI)	DO not enter continuous same PIN (only for BRI)
P5AF02	continuous increment PIN (only for BRI)	Do not enter the continuous increment PIN (only for BRI)
P5AF03	contiuuous decrement PIN (only for BRI)	Do not enter the contiuuous decrement PIN (only for BRI)
P5AF04	special data PIN (only for BRI)	Do not enter the special data PIN (only for BRI)
P5AF05	When comparing PIN, the old PIN and the new PIN are the same.	The new PIN should be different from the old PIN.

Problem Code	Problem Description	Troubleshooting
P5AF06	When comparing PIN, the old PIN is not stored. (only for BRI)	Old PIN must be saved before comarping PINs (BRI only)
S006	Fail to get TR34 RKL EPP cert	Inject EPP cert
S008	Fail to TR34 RKL bind	Check if host cert is valid
S009	Fail to TR34 RKL unbind	Check if host cert for unbinding is valid
S00A	Fail to load TR34 RKL master key	Check if master key block is valid
Z000	RSA key injection in field lock status	It cannot inject RSA keys in field lock status.
p004	Encryption fails	Check command message
p005	EP Crypto Open fails	Check command message
p006	Mac address comparison fails	Check command message
p007	Serial number comparison fails	Check command message
p008	EP Crypto Done fails	Check command message
p009	Not in auth init state	Authentication process needs between SP and EP
p011	The received Mac address from SP	Check command message
p012	The received serial number from SP	Check command message
p018	Invalid return value	Replace EPP

## Chapter 7. PNC

Problem Code	Problem Description	Troubleshooting
5S13100	Shutter unlock failure	Remove obstacle in shutter lock part. Replace solenoid module.
5S13200	Shutter lock failure	Remove obstacle in shutter lock part
5S14100	shutter open failure	Remove obstacle in shutter path
5S14200	Shutter close failure	Remove obstacle in shutter path
5S16D00	timeout over	Remove obstacle in shutter path. Replace IPNC B/D.
5S17100	parameter in DutySet CMD has invalid value	check SP setting value in registry
5S17200	duty parameter in CloseStep CMD has invalid value	check SP setting value in registry
5S17300	time parameter in CloseStep CMD has invalid value	check SP setting value in registry
5S1BD00	Missmatch connected B/D  (Shutter could not control with sub B/D of OPL/Palm)	Check sub B/D of shutter. Check connector.
9701020	PNC Board is BOOT mode	Download main firmware file
A86F00	Undefined CMD	Check MI of CMD
A96200	Missmatch received data size with bulk length value	Check data of communicated
A96300	Failure to check CRC	Check data of communicated
A96400	Invalid sequence number	Check data of communicated
A96500	received data size mismatch with bulk length that received in control.	Check data of communicated
A96600	did not regist callback function that process bulk data.	update firmware or replace unit
B86F00	Undefined CMD	Check MI of CMD
B96200	Missmatch received data size with bulk length value	Check data of communicated
B96300	Failure to check CRC	Check data of communicated
B96400	Invalid sequence number	Check data of communicated
B96500	received data size mismatch with bulk length that received in control.	Check data of communicated
B96600	did not regist callback function that process bulk data.	update firmware or replace unit
C86100	Invalid data in output settings	Check value of data
C86E00	Undefined Sub CMD	Check SubMI of CMD
C96200	Missmatch received data size with bulk length value	Check data of communicated

Problem Code	Problem Description	Troubleshooting
C96300	Failure to check CRC	Check data of communicated
C96400	Invalid sequence number	Check data of communicated
C96500	received data size mismatch with bulk length that received in control.	Check data of communicated
C96600	did not regist callback function that process bulk data.	update firmware or replace unit
D96200	Missmatch received data size with bulk length value	Check data of communicated
D96300	Failure to check CRC	Check data of communicated
D96400	Invalid sequence number	Check data of communicated
D96500	received data size mismatch with bulk length that received in control.	Check data of communicated
D96600	did not regist callback function that process bulk data.	update firmware or replace unit
E86F00	Undefined CMD	Check MI of CMD
E96200	Missmatch received data size with bulk length value	Check data of communicated
E96300	Failure to check CRC	Check data of communicated
E96400	Invalid sequence number	Check data of communicated
E96500	received data size mismatch with bulk length that received in control.	Check data of communicated
E96600	did not regist callback function that process bulk data.	update firmware or replace unit
F86E00	Undefined Sub CMD	Check SubMI of CMD
F95100	Fail memory access about unit info.	replace unit
F96200	Missmatch received data size with bulk length value	Check data of communicated
F96300	Failure to check CRC	Check data of communicated
F96400	Invalid sequence number	Check data of communicated
F96500	received data size mismatch with bulk length that received in control.	Check data of communicated
F96600	did not regist callback function that process bulk data.	update firmware or replace unit
G86F00	Undefined CMD	Check MI of CMD
G96200	Missmatch received data size with bulk length value	Check data of communicated
G96300	Failure to check CRC	Check data of communicated
G96400	Invalid sequence number	Check data of communicated
G96500	received data size mismatch with bulk length that received in control.	Check data of communicated

Problem Code	Problem Description	Troubleshooting
G96600	did not regist callback function that process bulk data.	update firmware or replace unit
H86E00	Undefined Sub CMD	Check SubMI of CMD
H96200	Missmatch received data size with bulk length value	Check data of communicated
H96300	Failure to check CRC	Check data of communicated
H96400	Invalid sequence number	Check data of communicated
H96500	received data size mismatch with bulk length that received in control.	Check data of communicated
H96600	did not regist callback function that process bulk data.	update firmware or replace unit
I21100	OPL control failure that move to down position. down sensor not detected.	Check down sensor for OPL or remove obtacle. replace the sensor that did not work.
I21200	OPL control failure that escape from down position. down sensor remained detect.	Check down sensor for OPL or remove obtacle. replace the sensor that did not work.
I22100	OPL control failure that move to up position. up sensor not detected.	Check up sensor for OPL or remove obtacle. replace the sensor that did not work.
I22200	OPL control failure that escape from up position. up sensor remained detect.	Check up sensor for OPL or remove obtacle. replace the sensor that did not work.
I2BD00	Sub B/D not connected	Check sub B/D for OPL/PALM control
I2BM00	Unexpected OPL position. OPL moved to against direction.	Check sensor and motor for OPL. replace sensor or motor that did not work. It can be occurred to pushed OPL by costumer during move to up position.
I2BS00	Up, Down Sensor for OPL is failure. (all dark detected)	Check sensor status for OPL. replace the sensor that did not work.
I31100	PALM guide control failure that move to down position. down sensor not detected.	Check down sensor for PALM or remove obtacle. replace the sensor that did not work.
I31200	PALM guide control failure that escape from down position. down sensor remained detect.	Check down sensor for PALM or remove obtacle. replace the sensor that did not work.
I32100	PALM guide control failure that move to up position. up sensor not detected.	Check up sensor for PALM or remove obtacle. replace the sensor that did not work.
I32200	PALM guide control failure that escape from up position. up sensor remained detect.	Check up sensor for PALM or remove obtacle. replace the sensor that did not work.
I3BM00	Unexpected PALM Guide position. PALM Guide moved to against direction.	Check sensor and motor for PALM. replace sensor or motor that did not work.
I3BS00	Up, Down Sensor for PALM is failure. (all dark detected)	Check sensor status for PALM. replace the sensor that did not work.
I86100	OPL/PALM Initialize CMD parameter is invalid.	Check parameter value for OPL/PALM Initialize.
I86F00	Undefined CMD	Check MI of CMD
I96200	Missmatch received data size with bulk length value	Check data of communicated
I96300	Failure to check CRC	Check data of communicated

Problem Code	Problem Description	Troubleshooting
I96400	Invalid sequence number	Check data of communicated
I96500	received data size mismatch with bulk length that received in control.	Check data of communicated
I96600	did not regist callback function that process bulk data.	update firmware or replace unit
I96D00	OPL/PALM initialize processing timeout. (process not finished during in 4min.)	Check sensor and motor status for OPL/PALM. replace sensor or motor that did not work.
J96200	Missmatch received data size with bulk length value	Check data of communicated
J96300	Failure to check CRC	Check data of communicated
J96400	Invalid sequence number	Check data of communicated
J96500	received data size mismatch with bulk length that received in control.	Check data of communicated
J96600	did not regist callback function that process bulk data.	update firmware or replace unit
K86F00	Undefined CMD	Check MI of CMD
K96200	Missmatch received data size with bulk length value	Check data of communicated
K96300	Failure to check CRC	Check data of communicated
K96400	Invalid sequence number	Check data of communicated
K96500	received data size mismatch with bulk length that received in control.	Check data of communicated
K96600	did not regist callback function that process bulk data.	update firmware or replace unit
L86F00	Undefined CMD	Check MI of CMD
L96200	Missmatch received data size with bulk length value	Check data of communicated
L96300	Failure to check CRC	Check data of communicated
L96400	Invalid sequence number	Check data of communicated
L96500	received data size mismatch with bulk length that received in control.	Check data of communicated
L96600	did not regist callback function that process bulk data.	update firmware or replace unit
M21100	OPL control failure that move to down position. down sensor not detected.	Check down sensor for OPL or remove obtacle. replace the sensor that did not work.
M21200	OPL control failure that escape from down position. down sensor remained detect.	Check down sensor for OPL or remove obtacle. replace the sensor that did not work.
M22100	OPL control failure that move to up position. up sensor not detected.	Check up sensor for OPL or remove obtacle. replace the sensor that did not work.
M22200	OPL control failure that escape from up position. up sensor remained detect.	Check up sensor for OPL or remove obtacle. replace the sensor that did not work.
M2BD00	Sub B/D not connected	Check sub B/D for OPL/PALM control

Problem Code	Problem Description	Troubleshooting
M2BM00	Unexpected OPL position. OPL moved to against direction.	Check sensor and motor for OPL. replace sensor or motor that did not work. It can be occurred to pushed OPL by customer during move to up position.
M2BS00	Up, Down Sensor for OPL is failure. (all dark detected)	Check sensor status for OPL. replace the sensor that did not work.
M31100	PALM guide control failure that move to down position. down sensor not detected.	Check down sensor for PALM or remove obstacle. replace the sensor that did not work.
M31200	PALM guide control failure that escape from down position. down sensor remained detect.	Check down sensor for PALM or remove obstacle. replace the sensor that did not work.
M32100	PALM guide control failure that move to up position. up sensor not detected.	Check up sensor for PALM or remove obstacle. replace the sensor that did not work.
M32200	PALM guide control failure that escape from up position. up sensor remained detect.	Check up sensor for PALM or remove obstacle. replace the sensor that did not work.
M3BM00	Unexpected PALM guide position. PALM guide moved to against direction.	Check sensor and motor for PALM guide. replace sensor or motor that did not work.
M3BS00	Up, Down Sensor for PALM is failure. (all dark detected)	Check sensor status for PALM. replace the sensor that did not work.
M86100	OPL/PALM control CMD parameter is invalid.	Check parameter value for OPL/PALM control.
M86F00	Undefined CMD	Check MI of CMD
M96200	Missmatch received data size with bulk length value	Check data of communicated
M96300	Failure to check CRC	Check data of communicated
M96400	Invalid sequence number	Check data of communicated
M96500	received data size mismatch with bulk length that received in control.	Check data of communicated
M96600	did not regist callback function that process bulk data.	update firmware or replace unit
M96D00	OPL/PALM processing timeout. (process not finished during in 4min.)	Check sensor and motor status for OPL/PALM. replace sensor or motor that did not work.
N86F00	Undefined CMD	Check MI of CMD
N96200	Missmatch received data size with bulk length value	Check data of communicated
N96300	Failure to check CRC	Check data of communicated
N96400	Invalid sequence number	Check data of communicated
N96500	received data size mismatch with bulk length that received in control.	Check data of communicated
N96600	did not regist callback function that process bulk data.	update firmware or replace unit
O86F00	Undefined CMD	Check MI of CMD
O96200	Missmatch received data size with bulk length value	Check data of communicated

Problem Code	Problem Description	Troubleshooting
O96300	Failure to check CRC	Check data of communicated
O96400	Invalid sequence number	Check data of communicated
O96500	received data size mismatch with bulk length that received in control.	Check data of communicated
O96600	did not regist callback function that process bulk data.	update firmware or replace unit
P86100	OPL/PALM Setting CMD parameter is invalid.	Check parameter value for OPL/PALM setting.
P86F00	Undefined CMD	Check MI of CMD
P96200	Missmatch received data size with bulk length value	Check data of communicated
P96300	Failure to check CRC	Check data of communicated
P96400	Invalid sequence number	Check data of communicated
P96500	received data size mismatch with bulk length that received in control.	Check data of communicated
P96600	did not regist callback function that process bulk data.	update firmware or replace unit
Q86F00	Undefined CMD	Check MI of CMD
Q96200	Missmatch received data size with bulk length value	Check data of communicated
Q96300	Failure to check CRC	Check data of communicated
Q96400	Invalid sequence number	Check data of communicated
Q96500	received data size mismatch with bulk length that received in control.	Check data of communicated
Q96600	did not regist callback function that process bulk data.	update firmware or replace unit
R86F00	Undefined CMD	Check MI of CMD
R96200	Missmatch received data size with bulk length value	Check data of communicated
R96300	Failure to check CRC	Check data of communicated
R96400	Invalid sequence number	Check data of communicated
R96500	received data size mismatch with bulk length that received in control.	Check data of communicated
R96600	did not regist callback function that process bulk data.	update firmware or replace unit
5S13100	Shutter unlock failure	Remove obstacle in shutter lock part. Replace solenoid module.
5S13200	Shutter lock failure	Remove obstacle in shutter lock part
5S14100	shutter open failure	Remove obstacle in shutter path
5S14200	Shutter close failure	Remove obstacle in shutter path

Problem Code	Problem Description	Troubleshooting
5S16D00	timeout over	Remove obstacle in shutter path. Replace IPNC B/D.
5S17100	parameter in DutySet CMD has invalid value	check SP setting value in registry
5S17200	duty parameter in CloseStep CMD has invalid value	check SP setting value in registry
5S17300	time parameter in CloseStep CMD has invalid value	check SP setting value in registry
5S1BD00	Missmatch connected B/D (Shutter could not control with sub B/D of OPL/Palm)	Check sub B/D of shutter. Check connector.
S86F00	Undefined CMD	Check MI of CMD
S96200	Missmatch received data size with bulk length value	Check data of communicated
S96300	Failure to check CRC	Check data of communicated
S96400	Invalid sequence number	Check data of communicated
S96500	received data size mismatch with bulk length that received in control.	Check data of communicated
S96600	did not regist callback function that process bulk data.	update firmware or replace unit
T86F00	Undefined CMD	Check MI of CMD
T96200	Missmatch received data size with bulk length value	Check data of communicated
T96300	Failure to check CRC	Check data of communicated
T96400	Invalid sequence number	Check data of communicated
T96500	received data size mismatch with bulk length that received in control.	Check data of communicated
T96600	did not regist callback function that process bulk data.	update firmware or replace unit
U86E00	Undefined Sub CMD	Check SubMI of CMD
U96200	Missmatch received data size with bulk length value	Check data of communicated
U96300	Failure to check CRC	Check data of communicated
U96400	Invalid sequence number	Check data of communicated
U96500	received data size mismatch with bulk length that received in control.	Check data of communicated
U96600	did not regist callback function that process bulk data.	update firmware or replace unit
U96700	received data size missmatch with download size.	Check data of communicated
U96800	Invalid size of download sector	Check data of communicated
U96900	size of download sector is over than 4KB.	Check data of communicated
U96A00	Total size of download data is over.	Check data of communicated

Problem Code	Problem Description	Troubleshooting
U96B00	sequence number that received in download CMD has not sequential.	Check data of communicated
U96C00	Failure to write downloaded data in memory	Check data of communicated
V86F00	Undefined CMD	Check MI of CMD
V96200	Missmatch received data size with bulk length value	Check data of communicated
V96300	Failure to check CRC	Check data of communicated
V96400	Invalid sequence number	Check data of communicated
V96500	received data size mismatch with bulk length that received in control.	Check data of communicated
V96600	did not regist callback function that process bulk data.	update firmware or replace unit
W86F00	Undefined CMD	Check MI of CMD
W96200	Missmatch received data size with bulk length value	Check data of communicated
W96300	Failure to check CRC	Check data of communicated
W96400	Invalid sequence number	Check data of communicated
W96500	received data size mismatch with bulk length that received in control.	Check data of communicated
W96600	did not regist callback function that process bulk data.	update firmware or replace unit
X86F00	Undefined CMD	Check MI of CMD
X96200	Missmatch received data size with bulk length value	Check data of communicated
X96300	Failure to check CRC	Check data of communicated
X96400	Invalid sequence number	Check data of communicated
X96500	received data size mismatch with bulk length that received in control.	Check data of communicated
X96600	did not regist callback function that process bulk data.	update firmware or replace unit
Y86F00	Undefined CMD	Check MI of CMD
Y96200	Missmatch received data size with bulk length value	Check data of communicated
Y96300	Failure to check CRC	Check data of communicated
Y96400	Invalid sequence number	Check data of communicated
Y96500	received data size mismatch with bulk length that received in control.	Check data of communicated
Y96600	did not regist callback function that process bulk data.	update firmware or replace unit
Z86F00	Undefined CMD	Check MI of CMD
Z96200	Missmatch received data size with bulk length value	Check data of communicated

Problem Code	Problem Description	Troubleshooting
Z96300	Failure to check CRC	Check data of communicated
Z96400	Invalid sequence number	Check data of communicated
Z96500	received data size mismatch with bulk length that received in control.	Check data of communicated
Z96600	did not regist callback function that process bulk data.	update firmware or replace unit

## Chapter 8. Receipt Printer

Problem Code	Problem Description	Troubleshooting
2010100	In case of detecting to be open lever of print head before printing receipt paper.	1.Close the lever of print head completely.
2010200	In case of detecting to be overheated in print head before printing receipt paper.	1.Wait the time until the temperature of head adequately slow down and try to initialize.
2010300	Paper jam occurs in return path before printing or cutting or discharging receipt paper.	1.Remove jammed paper between receipt printer head and rollers.
2010400	It is detected that paper is empty before printing receipt receipt printer.	1.Replenish receipt paper. 2.Check the status of sensor and its connector.
2010500	It is detected that paper is not properly set before printing.	1.Check the status of setting paper. 2.Check the status of sensor and its connector.
2010600	Command is received while doing self test.	1.After terminating self test and initialize receipt receipt printer.
2010800	It is detected when paper is not properly cut while operating.	1.Check the Cutter module. 2.Check if receipt printer head lever is properly close.
2010900	Black mark is not properly detected in receipt paper before printing.	1.Check the status of Black mark sensor. 2.Check if BlackMark Setting is correctly set.(If BlackMark unused, Dip Switch #2 ON or BlackMark Disable in VDM)).
2010A00	The size of image print data is abnormal while printing image.	1.Check the AP version and initialize.
2080100	In case of detecting to be open lever of print head after printing receipt paper.	1.Close the lever of print head completely.
2080200	In case of detecting to be overheated in print head after printing receipt paper.	1.Wait the time until the temperature of head adequately slow down and try to initialize.
2080300	Paper jam occurs in return path after printing or cutting or discharging receipt paper.	1.Remove jammed paper between receipt printer head and rollers.
2080400	It is detected that paper is empty after printing receipt receipt printer.	1.Replenish receipt paper. 2.Check the status of sensor and its connector.
2080500	It is detected that paper is not properly set after printing.	1.Check the status of setting paper. 2.Check the status of sensor and its connector.
2080600	Command is received while doing self test.	1.After terminating self test and initialize receipt receipt printer. 2.Check the status of Near End sensor and its connector.
2080800	It is detected that paper is not properly cut while operating.	1.Check the Cutter module. 2.Check if receipt printer head lever is properly close.
2080900	Black mark is not properly detected in receipt paper after printing.	1.Check the status of Black mark sensor. 2.Check if Dip switch # 6 is correctly set.(Dip switch # 6 is set by On in case of not using Black mark).
2080A00	The size of image print data is abnormal while printing image.	1.Check the AP version and initialize.
2080B00	Margin setting error.	1. Check whether the default registry setting is changed. 2. Reset the PTR SP.

Problem Code	Problem Description	Troubleshooting
2080C00	Paper jammed at the exit of the slot.	1. Remove the jammed paper.
2080D00	Paper jam in path of dispense.	1. Remove the jammed paper.
2080E00	Error of Data Checksum	1. Update the firmware. or Replace device.
2080F00	Undefined Command or The firmware crashed.	1. Update the firmware. or Replace device.
2080I00	Use to same sequence number.Sequence number must be different to previous sequence number.	Need to check SP process.
2080K00	It means Image print is not finished.When SPR print image data with receive,If no more data received then SPR can not print all image data.	Cause is as follows.1. Cable is low quality. 2. USB disconnect. 3. SP is not work continuously.Need to analyze tracelog for more infomation.
2DN00	Communication failure between receipt printer and SP	check cable

## Chapter 9. RF Reader

Problem Code	Problem Description	Troubleshooting
9R11200	Fail to connect device or initialize device.	check communication cable.
9R13100	Fail to communicate	check communication cable
9R13101	RF Software occurs error.	Restart the system and check if the problem persists. If it repeats, update the software.
9R13102	RF Software occurs error.	Restart the system and check if the problem persists. If it repeats, update the software.
9R13103	RF Software occurs error.	Restart the system and check if the problem persists. If it repeats, update the software.
9R13104	communication fail.	1. Check communication cable. 2. call your attendant
9R13106	RF Software occurs error.	Restart the system and check if the problem persists. If it repeats, update the software.
9r1310a	The card is invalid or not support media	Check the card protocol and use supported card
9r1310b	Vivotech RF : Command not Allowed.	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
9r1310c	Vivotech RF : Sub Command not Allowed.	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
9RA0000	Perform a status code indicating that the EP download.	Restart the system and check if the problem persists. If it repeats, update the software.
9RB0000	Firmware Download Fail	1. Check for Serial Communication Cable 2. Check for Firmware Raw File corruption.
R020005	RF Device Certification Error	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R020014	Error about transmitting and receiving the text.	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R020016	Error about balance increase process	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R020055	Text error (Invalid format)	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R020056	Communication fail (Frame error)	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R0200FF	RF Device Operation Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.

Problem Code	Problem Description	Troubleshooting
r0203ED	Fail to Open device	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
r0203F0	usb write error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
r0203F1	usb read error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R050000	ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R050200	UNSUPPORTED	Restart the system and check if the problem persists. If it repeats, update the software.
R050300	FAILED	Restart the system and check if the problem persists. If it repeats, update the software.
R050400	NAK	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R050500	DATA MISSING	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R050600	LRC ERROR	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R050700	TLV ERROR	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R050800	Requested parameter is out of scope	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R050900	STX MISSING	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051000	ETX MISSING	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051100	UNKNOWN OPCODE	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051200	TOO MANY INSTRUCTIONS	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051300	Parameter is not supported	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051400	MEMORY ERROR	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051500	BUFFER OVERFLOW	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051700	COM TIMEOUT	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R051800	CONFIG ERROR	Because it is a card data error, change the card and test. If the problem repeats, restart the system.

Problem Code	Problem Description	Troubleshooting
R051900	INVALID DATA	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R052000	INCOMPLETE DATA	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R052100	UNKNOWN DATA	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R052200	Collision detected - More than one PICC in the RF Field	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R052300	Unable to write to the PCD Nonvolatile memory	Restart the system and check if the problem persists. If it repeats, replace the hardware.
R052400	Unable to read from the PCD Nonvolatile memory	Restart the system and check if the problem persists. If it repeats, replace the hardware.
R052500	RF failure (without PCD Error Recovery Sequence)	Restart the system and check if the problem persists. If it repeats, replace the hardware.
R052600	RF failure after PCD Error Recovery Sequence	Restart the system and check if the problem persists. If it repeats, replace the hardware.
R052700	PICC Data length overflow	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R052800	Hercules Error Code	Restart the system and check if the problem persists. If it repeats, update the software.
R052900	SAM/Contact general failure	Restart the system and check if the problem persists. If it repeats, update the software.
R053000	SAM not present	Restart the system and check if the problem persists. If it repeats, update the software.
R053100	SAM not active	Restart the system and check if the problem persists. If it repeats, update the software.
R053200	SAM Protocol error (Only in PCD control)	Restart the system and check if the problem persists. If it repeats, update the software.
R053300	Missing Parameter	Restart the system and check if the problem persists. If it repeats, update the software.
R053400	Application Disabled	Restart the system and check if the problem persists. If it repeats, update the software.
R053500	PCD Serial No. not suitable (For Password mechanism)	Restart the system and check if the problem persists. If it repeats, update the software.
R053600	Index not found (for Indexed Objects).	Restart the system and check if the problem persists. If it repeats, update the software.
R053700	Hash doesn't match for a public key	Restart the system and check if the problem persists. If it repeats, update the software.
R053800	AID length error (index field)	Restart the system and check if the problem persists. If it repeats, update the software.
R053900	Data field length error	Restart the system and check if the problem persists. If it repeats, update the software.
R054000	Setup Error: The PCD failed during setup. When this failure happens - all commands will fail except Reset PCD.	Restart the system and check if the problem persists. If it repeats, update the software.
R054100	Sub Scheme not Applicable	Restart the system and check if the problem persists. If it repeats, update the software.

Problem Code	Problem Description	Troubleshooting
R054200	PKI Storage Error. If the PCD encounters storage error during power-up it will refuse all Poll EMV (Do an EMV Transaction) Template commands with this error code. In addition this error can occur on a temporary storage error.	Restart the system and check if the problem persists. If it repeats, update the software.
R054300	Contactless Transaction Terminated	Restart the system and check if the problem persists. If it repeats, update the software.
R054400	Poll EMV Timeout ended	Restart the system and check if the problem persists. If it repeats, update the software.
R054500	EMV TRANSACTION CANCELLED	Restart the system and check if the problem persists. If it repeats, update the software.
R054600	PCD is BUSY	Restart the system and check if the problem persists. If it repeats, update the software.
R054700	Terminal Not Authorized	Restart the system and check if the problem persists. If it repeats, update the software.
R054800	Secret Parameter Error	Restart the system and check if the problem persists. If it repeats, update the software.
R054900	BOOT TARGET ID ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055000	BOOT PACKET LEN ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055100	BOOT FILE TOO BIG	Restart the system and check if the problem persists. If it repeats, update the software.
R055200	BOOT STAMP ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055300	BOOL FILE TARGET ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055400	BOOT KEY VERSION ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055500	BOOT HASH ALGO ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055600	BOOT META NOT ORIGINAL	Restart the system and check if the problem persists. If it repeats, update the software.
R055700	BOOT META MISS MANDATORY	Restart the system and check if the problem persists. If it repeats, update the software.
R055800	BOOT META TLV ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R055900	BOOT META LEN ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R056000	BOOT META VERSION ERROR	Restart the system and check if the problem persists. If it repeats, update the software.
R056100	PARAM MISSING	Restart the system and check if the problem persists. If it repeats, update the software.

Problem Code	Problem Description	Troubleshooting
R056200	INSUFFICIENT CREDIT	Restart the system and check if the problem persists. If it repeats, update the software.
R056300	BUFFER LENGTH	Restart the system and check if the problem persists. If it repeats, update the software.
R062000	[TIT] Command undefined	Restart the system and check if the problem persists.
R062001	[TIT] Parameter incorrect - BootMode	Restart the system and check if the problem persists.
R062002	[TIT] Command cannot be executed	Restart the system and check if the problem persists.
R062004	[TIT] Command data error	Restart the system and check if the problem persists.
R062021	[TIT] Read error - Pre-amble error	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R062022	[TIT] Read error - Post-amble error	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R062023	[TIT] Read error - LRC error	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R062024	[TIT] Read error - Parity error	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R062025	[TIT] Read error - Blank error	Because it is a card data error, change the card and test. If the problem repeats, restart the system.
R062027	[TIT] Card entry disabled	Restart the system. If it repeats, replace the device.
R062040	[TIT] Not Support Protocol	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062301	[TIT] 1st index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062302	[TIT] 2nd index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062303	[TIT] 3rd index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062304	[TIT] 4th index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062305	[TIT] 5th index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062306	[TIT] 6th index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.

Problem Code	Problem Description	Troubleshooting
R062307	[TIT] 7th index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R062308	[TIT] 8th index down error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063101	[TIT] API Not Supported	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063102	[TIT] Input File Error	Remove the firmware file in the SP folder and restart the system.
R063103	[TIT] Cancel by User	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063104	[TIT] Port Not Supported	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063105	[TIT] API In Use	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063110	[TIT] Command Parameter Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063120	[TIT] Response Timeout	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063121	[TIT] Response Data Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063122	[TIT] Response Command Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063123	[TIT] Response BCC Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063124	[TIT] Response NAK Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.

Problem Code	Problem Description	Troubleshooting
R063125	[TIT] Response DLE EOT Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063126	[TIT] Response Waiting	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.
R063199	[TIT] Unknown Error	Check the communication cable connected to the device. Check if the device is turned on. If it is a USB connection, remove the cable and connect it to see if there is a response in the device manager.

## Chapter 10. Shutter

Problem Code	Problem Description	Troubleshooting
5C02000	Failed to close shutter	1. Remove the foreign materials in shutter. 2. Retry to close shutter. 3. Replace the Shutter if the same symptom recurs.
5C02100	Failed to lock solenoid	1. Remove the foreign materials in shutter. 2. Retry to close shutter. 3. Replace the Shutter if the same symptom recurs.
5CU0100	Invalid sequence number	1. Turn the power off and on check that it operates normally. 2. Replace the Shutter main board if the same symptom recurs.
5O01000	Failed to open shutter	1. Remove the foreign materials in shutter. 2. Retry to open shutter. 3. Replace the Shutter if the same symptom recurs.
5O01100	Failed to unlock solenoid.	1. Replace solenoid
5OU0100	Invalid sequence number	1. Turn the power off and on check that it operates normally. 2. Replace the Shutter main board if the same symptom recurs.
5U00000	No image data to update	1. Retry to Update. 2. Replace the Shutter if the same symptom recurs.
5U00100	Invalid command in flash.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00200	Source address is not on a word boundary.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00300	Destination address is not on a correct boundary.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00400	Source address is not mapped in the memory map.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00500	Destination address is not mapped in the memory.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00600	Byte count is not multiple of 4 or is not a permitted value.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00700	Sector number is invalid.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00800	Sector is not blank.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U00900	Command to prepare sector for write operation was not executed.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U01000	Source and destination data is not same.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U01100	Flash programming hardware interface is busy.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.

Problem Code	Problem Description	Troubleshooting
5U05000	Image is not used in the shutter.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U05100	Image contained wrong Program ID.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U05200	Image contained wrong Unit ID.	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U05300	Occur CRC error in image header	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U05400	Occur CRC error in image data	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5U06000	Received data that is smaller than size of image	1. Retry to update. 2. Replace the Shutter if the same symptom recurs.
5UU0100	Invalid sequence number	1. Turn the power off and on check that it operates normally. 2. Replace the Shutter main board if the same symptom recurs.
5VU0100	Invalid sequence number	1. Turn the power off and on check that it operates normally. 2. Replace the Shutter main board if the same symptom recurs.
5Z00000	Unknown command.	1. Turn the power off and on check that it operates normally. 2. Replace the Shutter main board if the same symptom recurs.
5Z09900	Occur internal system error.	1. Turn the power off and on check that it operates normally. 2. Replace the Shutter main board if the same symptom recurs.
